**08/22/2025**

**Version 4.2.0-r1**

## **Table of Contents**

<b>Executive Summary .....</b>	<b>1</b>
<b>1. Introduction.....</b>	<b>7</b>
1.1. CAT Overview .....	7
1.2. Change Release Management Process .....	9
1.3. CAT Identifiers.....	9
1.3.1. CAT Reporter ID .....	10
1.3.2. Participant ID .....	10
1.3.3. Exchange ID .....	10
1.3.4. Member Alias.....	10
1.4. Fundamental Data Types.....	12
1.4.1. Data Validation .....	14
1.4.2. Name Value Pairs .....	15
<b>2. Reference Data .....</b>	<b>16</b>
2.1. Member Information.....	16
2.1.1. Member Dictionary Entry .....	18
2.1.2. Member Alias Detail Entry.....	19
2.2. Equity Symbols .....	20
2.2.1. CAT Symbol Master .....	20
2.3. Corporate Actions .....	21
2.4. Options Dictionary .....	21
2.4.1. Option Series Dictionary Entry .....	22
2.4.2. Option Symbol Changes .....	24
2.4.3. Complex Option Dictionary Entry .....	30
2.5. Market Maker Information .....	32
<b>3. Special Data Elements and Common Events .....</b>	<b>35</b>
3.1. Timestamps and Sequence Numbers .....	35
3.1.1. Sequence Number Subsystems .....	36
3.1.2. Time of Order Receipt .....	36
3.2. Symbology .....	36

3.3.	NBBO.....	36
3.4.	Order Linkage and Lifecycle .....	37
3.5.	Material Terms of an Order .....	39
3.5.1.	Order Types.....	39
3.5.2.	Order Handling Instructions .....	40
3.6.	Optional, Required, and Conditional Fields .....	41
3.7.	Common Events.....	42
3.7.1.	Note Event .....	42
3.7.2.	Self-Help Declarations.....	44
3.7.3.	Supplemental Trade Event.....	45
3.7.4.	Reject Message Event .....	47
4.	Events for Stock Exchanges .....	51
4.1.	Order Accepted Event .....	52
4.2.	Order Route Event .....	54
4.3.	Internal Order Route Event .....	57
4.4.	Order Modified Event.....	59
4.5.	Order Adjusted Event .....	63
4.6.	Order Canceled Event.....	66
4.7.	Order Trade Event.....	67
4.8.	Order Fill Event .....	70
4.9.	Order Cancel Route Event.....	71
4.10.	Order Modify Route Event.....	73
4.11.	Order Restatement Event.....	75
4.12.	Trade Break Event.....	77
4.13.	Trade Correction Event .....	77
4.14.	Lifecycle Keys .....	79
5.	Events for Options Exchanges .....	81
5.1.	Market Maker Quotes.....	82
5.1.1.	Quote Event.....	85
5.1.2.	Complex Quote Event.....	87

5.1.3.	Quote Cancel Event .....	90
5.2.	Options Orders .....	92
5.2.1.	Order Accepted Events .....	93
5.2.2.	Order Modified Events .....	102
5.2.3.	Order Canceled Event .....	120
5.2.4.	Routing Orders .....	122
5.2.5.	Trades and Fills .....	139
5.2.6.	Post Trade Allocation Event .....	145
5.3.	Option Order Restatement Event .....	147
5.4.	Option Trade Break Event .....	150
5.5.	Option Trade Correction Event .....	151
5.6.	Option Floor Broker Events .....	153
5.6.1.	Floor Participant Event .....	153
5.6.2.	Complex Floor Participant Event .....	156
5.6.3.	Return to Floor Participant Event .....	158
5.7.	Lifecycle Keys .....	159
6.	FINRA Reporting .....	164
6.1.	TRF/ORF/ADF Transaction Data Event .....	164
6.2.	OTC Halt/Resume Data .....	174
6.3.	Equity Best Bid and Offer Event .....	175
7.	Stock Exchange Event Examples .....	178
7.1.	Order Accepted Event Example .....	178
7.1.1.	JSON Examples .....	180
7.2.	Order Trade Event Example .....	182
7.2.1.	JSON Examples .....	184
7.3.	Order Route and Order Fill Event Example .....	186
7.3.1.	JSON Examples .....	189
7.4.	Order Restatement Example .....	191
7.4.1.	JSON Examples .....	193
7.5.	Order Modified Example .....	194

7.5.1.	JSON Examples .....	196
7.6.	Order Modified for because of Partial Fill at Away Exchange .....	197
7.6.1.	JSON Examples .....	200
7.7.	Order Adjusted Example .....	202
7.7.1.	JSON Examples .....	204
7.8.	Order Adjusted Example Firm Initiated.....	205
7.8.1.	JSON Examples .....	206
7.9.	Order Adjusted Event because of Partial Execution at Away Exchange.....	207
7.9.1.	JSON Examples .....	210
8.	Options Exchange Event Examples .....	213
8.1.	Quote and Quote Cancel Events .....	213
8.1.1.	Two-Sided Quotes Example.....	213
8.1.2.	One-Sided Quotes Example.....	217
8.2.	Option Order Event Examples .....	220
8.2.1.	Simple Option Order Accepted Example.....	220
8.2.2.	Complex Option Order Accepted Event Example.....	222
8.3.	Simple Option Order Modified Event .....	224
8.3.1.	JSON Example .....	226
8.4.	Simple Option Order Modified Event Created As a Result of Partial Execution at Away Exchange .....	228
8.4.1.	JSON Examples .....	231
8.5.	Simple Option Trade Event Examples .....	233
8.5.1.	JSON Examples .....	235
8.6.	Complex Options Trade Events Examples .....	237
8.6.1.	JSON Examples .....	244
8.7.	Complex Option Order Modify Event Example .....	249
8.7.1.	JSON Examples .....	251
8.8.	Complex Quote Event with Resulting Trades Example.....	251
8.8.1.	JSON Examples .....	255
9.	Submission Process .....	259

<b>10. Feedback and Corrections .....</b>	<b>260</b>
<b>11. Testing .....</b>	<b>261</b>
<b>12. Additional Information .....</b>	<b>262</b>
12.1. Public Website.....	262
12.2. FINRA CAT Help Desk .....	262
<b>Appendices .....</b>	<b>263</b>
Appendix A. Clock Synchronization Requirement.....	264
Appendix B. Error Codes.....	266
B.1. Data Ingestion Errors .....	266
B.2. Reference Data Validation Errors .....	273
B.3 Linkage Discovery Errors .....	278
B.4. Error Prefix Definition.....	283
Appendix C. Placeholder .....	285
Appendix D. CAT Date Definitions and Reporting Guidelines .....	286
Appendix E. Placeholder .....	289
Appendix F. Data Dictionary .....	290
Appendix G. CATFT (fileX) Token Service Instructions and Examples .....	330
Appendix H. Plan Processor Best Practices .....	335
Appendix I. Historical Summary of Document Revisions.....	336

## Executive Summary

The Consolidated Audit Trail (CAT) tracks orders throughout their lifecycle and identifies the exchanges and broker-dealers handling them. This allows regulators to more efficiently and accurately track activity in eligible securities — those under the jurisdiction of the Securities and Exchange Commission (the "SEC") — throughout the U.S. markets. CAT is created by a joint plan (CAT NMS Plan) of the Plan Participants or simply "Participants."

This document provides Participants with the necessary information to fulfill their reporting obligations to CAT in compliance with SEC Rule 613 and the CAT NMS Plan. It describes the requirements for reporting data to CAT, including detailed information about data elements and file formats of each reportable event. This document also describes how Participants should submit files to CAT, including access instructions, network and transport options, and testing requirements.

This document does not include information related to the provision of data by Industry Members. The *CAT Reporting Technical Specifications for Industry Members* can be found on the CAT NMS website ([www.catnmsplan.com](http://www.catnmsplan.com)).

**Table 1: Summary of Document Revisions**

See Appendix I for the Summary of Document Revisions for earlier versions.

Version	Date	Author	Description
4.1.0-r15	7/29/2022	FINRA CAT	<p><i>Spec Updates for Reject Message Event (RME):</i></p> <ul style="list-style-type: none"><li>• Added Section 3.7.4 for the new Reject Message Event (RME)</li><li>• Added Section 10.6.7 for RejectMessageEvents file kind data ingestion feedback</li><li>• Updated references to file kinds to include the new RejectMessageEvents file kind</li><li>• Updated Appendix B.1: Data Ingestion Errors to reflect errors applicable to the new RejectMessageEvents file kind</li><li>• Updated Appendix F: Data Dictionary to add new fields and to reference RME on existing fields as applicable</li></ul> <p><i>Spec Updates to Support Use of FINRA ADF:</i></p> <ul style="list-style-type: none"><li>• Added Section 6.3 for the new Equity Best Bid and Offer Event (EBBO)</li><li>• Updated Appendix F: Data Dictionary to add new fields</li></ul>

Version	Date	Author	Description
			and to reference EBBO on existing fields as applicable
4.1.0-r16	11/21/2022	FINRA CAT	<p>Moved Summary of Document Revision content for Releases 4.1.0-r9 through 4.1.0-r14 to Appendix I (changes not tracked)</p> <p>Updated <i>sentTimestamp</i> on Options Quote (OQ) event from Optional to Conditional; added language to clarify condition under which the field can be omitted</p> <p>Updated <i>sentTimestamp</i> on Options Quote Cancel (OQC) event from Optional to Conditional to better reflect description of field</p> <p>Updated Error Codes 7017, 7019, 7021, 7023 to clarify that they are Named Errors</p> <p>Updated description of 'FLOOR' <i>executionCode</i> to clarify that the value optionally may be reported beginning September 29, 2022 and must be reported beginning no later than November 14, 2022</p> <p>Updated Section 9.8.4 and Appendix G to include information for Disaster Recovery</p> <p>Updated Appendix F: Data Dictionary to:</p> <ul style="list-style-type: none"> <li>Add <i>cancelReasons</i> 156-160 and <i>executionCodes&gt;liquidityCode</i> 53-57 for Nasdaq Mercury, ISE, and Gemini</li> <li>Add <i>cancelReasons</i> for NASDAQ Mercury</li> <li>Add <i>orderType</i> PrimaryPegAvailWhenLocked and PrimaryPegUnavailWhenLocked for MIAX PEARL Equities</li> <li>Add <i>executionType</i> Name/Value Pairs SOT and STT for BOX</li> <li>Updated <i>handlingInstructions</i> &gt; crossType values 31 – 41 to apply to Mercury</li> </ul> <p><i>The following changes will be effective in the Production Environment on December 5, 2022:</i></p> <ul style="list-style-type: none"> <li>Updated Appendix F: Data Dictionary to add <i>rejectReason</i> codes for BOX, CBOE, IEX, MEMX, MIAX, and NYSE</li> <li>Updated Appendix B.3: Linkage Discovery errors updated to add Error Codes 6022, 6024, 6026, 6028 to support linkage of (exchange) OT to (Industry Member) MOOT</li> </ul> <p><i>The following changes will be effective in the Production Environment in March 2023:</i></p> <ul style="list-style-type: none"> <li>Added information for new BestBidAndOffer file kind to support the reporting of the EBBO event</li> </ul>
4.1.0-r17	2/21/2023	FINRA CAT	<p>Updated Section 3.7.3 Supplemental Trade Event</p> <p>Added an example Reject Message Event in Section 3.7.4</p> <p>Updated Appendix F: Data Dictionary to:</p> <ul style="list-style-type: none"> <li>Add <i>cancelReason</i> for MIAX Pearl Equities</li> <li>Add <i>handlingInstructions</i> for NYSE Equities (NoRetail) and MIAX and MIAX Emerald (AutoMatchLimit and AutoMatchMarket)</li> <li>Add <i>orderAttributes</i> &gt; PWASH value of 'X' for CBOE, ClientID for NYSE</li> <li>Add <i>orderAttributes</i> &gt; AIQ value of 'b', 'd', 'n', 'o', 'w', 'y' and clarifying descriptors for NASDAQ Equities</li> <li>Add/remove <i>rejectReason</i> values for CBOE, LTSE, MEMX, NASDAQ Equities, and NYSE</li> <li>Add <i>executionCodes/orderAttributes</i> for BOX (FLEX)</li> </ul>

Version	Date	Author	Description
4.1.0-r18	4/17/2023	FINRA CAT	<p>Updated Summary of Document Revisions for version 4.1.0-r17 to include the date of publication</p> <p>Updated Tables 63, 101, and 102 to include Equity Best Bid and Offer (EBBO):</p> <ul style="list-style-type: none"> <li>Table 63: replaced #2 from 'exchange' to 'marketCenterId' data type and description</li> <li>Table 101: added 'Display-Only Facility' to heading; #1-6, and 8 added 'Order Accepted' and 'Equity Best Bid and Offer'</li> <li>Table 102: #1-6 added 'Equity Best Bid and Offer'</li> </ul> <p>Updated Appendix F: Data Dictionary to:</p> <ul style="list-style-type: none"> <li>Add <i>handlingInstructions</i> &gt; CxlPxBack value of 'N', 'C', 'U'</li> <li>Add <i>marketCenterId</i> &gt; ADF for EBBO events; updated description of 'D' to 'ADF-TRF'</li> <li>Add <i>orderAttributes</i> &gt; OverrideAIQDLO boolean value for IEX</li> <li>Add <i>orderAttributes</i> &gt; orgID name/value and PriorityUpdate boolean value for Nasdaq Equities</li> <li>Add <i>rejectReason</i> for NYSE American Options</li> <li>Add <i>rejectReason</i> for Nasdaq Options</li> <li>Add <i>originalAskQuoteID</i> description</li> </ul>
4.1.0-r19	7/18/2023	FINRA CAT	<p>Updated Summary of Document Revisions for version 4.1.0-r18 to include the date of publication; made minor formatting changes for consistency</p> <p>Clarified submission requirements:</p> <ul style="list-style-type: none"> <li>Section 9.1.1, Table 79: File Kinds: added 'Record Type'</li> <li>Section 10.9 Corrections, Deletions, and Replacements: clarified correction records; added 'Correction Submission Schedule' table; updated section title; removed list of events in the first sentence; added cross-reference to section 10.8.1</li> <li>Section 10.9.1.1 Delete Records: removed outdated footnote (16)</li> <li>Section 10.9.2 File Replacement: clarified late file submission and number of replacements; added cross-reference to section 10.8.1</li> </ul> <p>Updated Appendix F: Data Dictionary to:</p> <ul style="list-style-type: none"> <li>Add <i>handlingInstructions</i> &gt; SigVersion value of 'SignalV5' and "SignalV6" for IEX</li> <li>Add <i>orderAttributes</i> &gt; FloorOrderID value for Cboe (C1)</li> <li>Add and Update <i>rejectReason</i> for MIAX Options, MIAX Pearl Options, and MIAX Emerald Options</li> <li>Add <i>rejectReason</i> for Nasdaq Options</li> </ul>
4.1.0-r20	9/25/2023	FINRA CAT	<p>Added <i>initiator</i> field to section 5.1.1, Table 32: Quote Events</p> <p>Updated Appendix F: Data Dictionary to:</p> <p>Onboard MEMXOP:</p> <ul style="list-style-type: none"> <li>Add <i>Participant ID</i> &gt; Members Options Exchange value of 'MEMXOP'</li> <li>Add <i>handlingInstructions</i> &gt; Price Adjustment value of 'PA'</li> <li>Add <i>orderAttributes</i> &gt; values of 'PAF', 'PAB', 'MTP'</li> <li>Add <i>cancelReason</i> &gt; values of '0 – 19'</li> <li>Add <i>exchOriginCode</i> &gt; values of '1 – 7'</li> <li>Add <i>rejectReason</i> &gt; various values in the range of '1001 – 3019'</li> </ul>

Version	Date	Author	Description
			<p>Other Updates:</p> <ul style="list-style-type: none"> <li>• Add <i>initiator</i> &gt; Event(s) description 'Option Quote Event'</li> <li>• Add <i>rejectReason</i> &gt; 'PEARLEQ_ORR_0078' for MIAX Pearl Equities</li> <li>• Update <i>rejectReason</i> &gt; 'PEARLEQ_ORR_0019' for MIAX Pearl Equities</li> <li>• Add <i>cancelReason</i> &gt; 'PEARLEQ_0126' for MIAX Pearl Equities</li> <li>• Add <i>handlingInstructions</i> &gt; '27 MEMXOP' to DestExch value for Nasdaq Options</li> <li>• Update <i>orderType</i> &gt; 'FMPEG' for IEX</li> <li>• Add <i>cancelReason</i> &gt; 'EMLD_0065' for MIAX Emerald Options</li> <li>• Update <i>orderAttributes</i> &gt; REJA value of 'x' description for Cboe</li> </ul>
4.1.0-r21	4/15/2024	FINRA CAT	<ul style="list-style-type: none"> <li>• Updated Appendix F: Data Dictionary to: Add <i>cancelReason</i> &gt; 'MIAMI_0065' for MIAX Options</li> <li>• Add <i>cancelReason</i> &gt; 'PEARL_0039' for MIAX Pearl Equities</li> <li>• Add <i>cancelReason</i> &gt; '21' for MEMX</li> <li>• Add <i>cancelReason</i> &gt; '85-88' for PHLX and NOM Options</li> <li>• Add <i>cancelReason</i> &gt; '161-164' for ISE and GEMX Options</li> <li>• Add <i>cancelReason</i> &gt; '1521-1523' for MRX and NOM Options</li> <li>• Add <i>cancelReason</i> &gt; 'PostOnlyCancelled' for IEX</li> <li>• Add <i>cancelReason</i> &gt; '1017, 1018, 1020 – 1155 1019, 1156 - 1513' for GEMX Options</li> <li>• Add <i>definedNoteData</i> &gt; 'AucPrc, DMM' for NYSE Equities</li> <li>• Added FINRA CAT standard <i>executionCodes</i> and <i>orderAttributes</i> &gt; 'PCTPX'</li> <li>• Added <i>executionCodes</i> &gt; 'Y, W' for IEX</li> <li>• Add <i>handlingInstructions</i> &gt; 'Dest Exch' value of '28' for Nasdaq Options</li> <li>• Add <i>handlingInstructions</i> &gt; 'RoutingInst' value of '0, 1, 2' for IEX</li> <li>• Add <i>handlingInstructions</i> &gt; 'ExecBroker' value of 'CUSTOM-RFTY and LSTY' for NSDQ</li> <li>• Add <i>handlingInstructions</i> &gt; 'CrossType' value of '42' for NOBO, MRX, GEMX Options</li> <li>• Remove <i>handlingInstructions</i> &gt; 'NoRetail' for NYSE Options</li> <li>• Add <i>noteType</i> &gt; 'AOCNoParticipation, AOCNoParticipationRej' for NYSE Equities</li> <li>• Added <i>orderAttributes</i> &gt; 'REJA' values of 'w and Q' for Cboe Options</li> <li>• Added <i>orderAttributes</i> &gt; 'CancelOrSlide' values of '0, 3' for IEX</li> <li>• Add <i>rejectReason</i> &gt; '117-120' for PHLX and NOM Options</li> <li>• Add <i>rejectReason</i> &gt; '569-572' for ISE and GEMX Options</li> <li>• Add <i>rejectReason</i> &gt; '1521-1523' for MERX and NOBO Options</li> <li>• Add <i>rejectReason</i> &gt; '311-325, 326, 327, 906, 330, 331' for NYSE Equities</li> <li>• Add <i>rejectReason</i> &gt; '328, 329, 330' for AMEROP Options</li> <li>• Add <i>rejectReason</i> &gt; '329' for ARCAOP Options</li> <li>• Add <i>rejectReason</i> &gt; '1-16, 1017-1520, Other' for GEMX Options</li> </ul>

Version	Date	Author	Description
			<ul style="list-style-type: none"> <li>• Add <i>rejectReason</i> &gt; 'InvalidTagCombinationForPostOnlyOrder', 'InvalidOddLot' and 'InvalidTradeNowInstruction' for IEX</li> <li>• Add <i>rejectReason</i> &gt; 'PEARLEQ_MRR_0052' and 'PEARLEQ_MRR_0053' for MIAX Pearl Options</li> <li>• Aligned <i>rejectReason</i> and <i>orderAttributes</i> for NYSE Options to support Pillar platform transition</li> </ul>
4.1.0-r22	9/10/2024	FINRA CAT	<p>Add clarification to sections:</p> <ul style="list-style-type: none"> <li>○ 2.1.1 &gt; 'Member Alias values that are used as a Routing Party for intervenue linkage must be seven (7) or fewer characters'</li> <li>○ 3.4 &gt; 'The text string must be a Member Alias of seven (7) or fewer characters.'</li> <li>○ 4.13 &gt; 'Previous Trade Key: date, exchange, symbol, refTradeID'</li> <li>○ 5.5 &gt; 'Previous Trade Key: date, exchange, optionID, refTradeID'</li> </ul> <p>Add <i>cancelReason</i> &gt; '0,1,4-21' for LTSE  Add <i>cancelReason</i> &gt; 'PEARLEQ_0021-0028, 0127-0134' for MIAX PEARLEQ  Add <i>cancelReason</i> &gt; 'SPHR_0004, 0005, 0007, 0012, 0018, 0029-0038, 0041-0044, 0061-0063' for MIAX SPHR  Add <i>exchOriginCode</i> &gt; '1-6' for MIAX SPHR  Add <i>executionCodes</i> &gt; 'B, K' for IEX  Add <i>handlingInstructions</i> &gt; 'PegO, RML, RMO, RP, RSV' for LTSE  Add <i>handlingInstructions</i> &gt; 'DirectedTo_ALGO' for NYSE Equities  Add <i>orderAttributes</i> &gt; 'R, RDM, RRT, RPF, RBH, STP' for LTSE  Remove <i>handlingInstructions</i> &gt; 'CUBEAUCF, FloorTradeNamesLater, FloorTradeNamesLaterAllocation, NOW, ND, NR, PNP, PNP+, PNPB, PNPLO' for NYSE Options  Remove <i>handlingInstructions</i> &gt; 'ExecInst, PriceSliding, TradeThruExemptReason, MatchTradePrevention, MTPSublevelInd' for NYSE CHX  Remove <i>handlingInstructions</i> &gt; 'NoMPL, NoMPL-IOI' for NYSE Equities  Update <i>handlingInstructions</i> &gt; descriptions for NYSE Options and Equities  Remove <i>orderAttributes</i> &gt; Legacy as of 11/2019 for NYSE CHX  Remove <i>orderAttributes</i> &gt; 'Border, CROWD, MaxDiscVol, SOrder, STP, SelfTrade, MinTriggerSize, MinPegSize, MaxDiscVol, CeilingFloorPrice, DiscPriceRange' and all 'TypeOfInterest' values for NYSE Equities  Update <i>orderAttributes</i> &gt; descriptions for NYSE Options and Equities  Add <i>Participant ID</i> &gt; 'SPHR' for MIAX Sapphire Options Exchange  Add <i>rejectReason</i> &gt; 'qa, qc-qe, qi, qm-qo, ql, qr-qt, qx-qz, qC-qF, qK-qM, qO-qS, qU, qW' for Cboe Options  Add <i>rejectReason</i> &gt; 'RoutingNotAllowed' for IEX  Add <i>rejectReason</i> &gt; '1001-1003, 1006, 1018-1020, 1022-1023, 1027, 1099-1181, 2001, 2003, 2006, 2018, 2099-2105, 2107-2131, 3000-3011' for LTSE  Add <i>rejectReason</i> &gt; 'PEARLEQ_MRR_0054 – 0057', 'PEARLEQ_ORR_0079 – 0089', 'PEARLEQ_ORR_0120 – 0125' for MIAX PEARLEQ  Add <i>rejectReason</i> &gt; 'PEARL_FOR_0000 – 0008', 'PEARL_FOR_0011', 'PEARL_FCR_0000 – 0003' for MIAX PEARL  Add <i>rejectReason</i> &gt; 'SPHR_ERR_0000 – 1009, 1011 – 1021, 1024 – 1036, 1039 – 1044, 1046 – 1048, 1051, 1053 – 1077, 1079,</p>

Version	Date	Author	Description
			<p>1081, 2001, 2102, 2105, 2108, 2110, 2119, 3000 – 3007, 3010, 3012 – 3015, 4000 – 4001, 4500, 4502, 4504 – 4506, 4509 – 4515, 4520, 4525 – 4527, 5100 – 5103', 'SPHR_FOR_0000 – 0011', 'SPHR_FCR_0000 – 0003' for MIAX SPHR</p> <p>Add <i>rejectReason</i> &gt; '332-335' for NYSE Equities and Options</p> <p>Update <i>rejectReason</i> &gt; description for '250' for NYSE Equities and Options</p> <p>Remove <i>rejectReason</i> &gt; '1-568', 'OTHER' for Nasdaq GEMX</p>
4.1.0-r23	1/2/2025	FINRA CAT	Update Section 3.7.4 Reject Message Event > Description and Lifecycle Keys
4.1.1-r1	4/14/2025	FINRA CAT	<p>Update Appendix D to reflect correct "Submission Due" and "Corrections Due" dates.</p> <p>Correct Data Dictionary value reference for <i>legType</i> under Table 8 to <i>legType</i>.</p> <p>Removed Data Dictionary values specific to exchanges and placed them in corresponding Plan Participant Technical Specifications Addendum.</p> <ul style="list-style-type: none"> <li>Conforming changes to document to clarify purpose of Addendum.</li> </ul> <p>Updated Quote Linkage to retired as of April 1<sup>st</sup>, 2025</p> <p>Updated NYSE Chicago descriptions to NYSE Texas</p>
4.2.0	06/10/2025	FINRA CAT	<p>Added new Complex Quote (OCQ) event with conforming changes.</p> <ul style="list-style-type: none"> <li>Added section 5.1.2 Complex Quote Event.</li> <li>Added section 8.8 Complex Quote Event with Resulting Trades Example</li> <li>Added section 8.8.1 JSON Examples</li> </ul> <p>Add 'complexOptionID' name/value pair to <i>executionCodes</i> field list of FINRA CAT standard valid values in Data Dictionary.</p> <p>Updated Appendix G to include Production Mirror endpoints and buckets</p> <p>Updated language regarding validation for corrections in section 10.9.1.</p> <ul style="list-style-type: none"> <li>Removed corresponding ingestion error code .180 from Appendix B.</li> </ul>
4.2.0-r1	08/22/2025	FINRA CAT	<p>Spec updates to support TRF Fractional Shares implementation:</p> <ul style="list-style-type: none"> <li>Defined new data type Real Quantity in section 1.4 Fundamental Data Types</li> <li>Added two new fields to Section 6.1 TRF/ORF/ADF Transaction Data Event <ul style="list-style-type: none"> <li><i>executionQuantityFractional</i></li> <li><i>reportedShareQuantityFractional</i></li> </ul> </li> </ul> <p>Onboard 24X:</p> <ul style="list-style-type: none"> <li>Added R to relatedMarketCenterId</li> <li>Added 24X to Participant Id</li> </ul>

# **1. Introduction**

## **1.1. CAT Overview**

The Securities and Exchange Commission (SEC) approved Rule 613 under the Securities Exchange Act of 1934, which requires national securities exchanges and national securities associations (collectively, the Participants) to submit a national market system plan to create, implement, and maintain a consolidated audit trail ([CAT NMS Plan](#)) that would capture customer and order event information for orders in NMS Securities and OTC Equity Securities (Eligible Securities), across all markets, from the time of order inception through routing, cancellation, modification, execution, and allocation. The SEC approved the CAT NMS Plan on November 15, 2016.

In accordance with SEC Rule 613, the CAT NMS Plan requires a Central Repository that will comprehensively track orders throughout their lifecycle and identify the Participants and Industry Members handling them, as well as the account holders and authorized traders for any account that originates an order (Customers<sup>1</sup>). Specific data elements will be submitted to the Central Repository by Participants, Industry Members, and CAT Reporting Agents. CAT Reporting Agents may be third-party firms reporting on behalf of other entities, or may be outside parties that are not required to submit data to the CAT, but from which the CAT may receive data per the CAT NMS Plan, such as the Securities Information Processors (SIPs).

The CAT NMS Plan also requires the selection of an entity as the Plan Processor to be responsible for performing the processing functions required by Rule 613 and the Plan. The Operating Committee of Consolidated Audit Trail, LLC, a governing body composed of representatives of the Participants, oversees the operation of the CAT. The duties of the Operating Committee are further described in Article IV of the CAT NMS Plan.

---

<sup>1</sup> Customers are defined in SEC Rule 613(j)(3) as: (i) the account holder(s) of the account at a registered broker-dealer originating the order; and (ii) any person from whom the broker-dealer is authorized to accept trading instructions for such account, if different from the account holder(s).

Refer to SEC Rule 613, available at: <https://www.sec.gov/rules/final/2012/34-67457.pdf> for more details.

Refer also to CAT NMS Plan, available at: <https://www.catnmsplan.com/wp-content/uploads/2018/02/34-79318-exhibit-a.pdf>.

## 1.2. Change Release Management Process

Changes to this technical specification will be released as follows:

Prior to the go-live date for system changes

- ♦ A new specification will be posted to the CAT Public Website
- ♦ A notice will be posted on the website with a summary of changes and links to relevant information.
- ♦ One or more email alerts will be sent to plan participants with a summary of changes and links to relevant information.
- ♦ In some cases, CAT may accept production reporting using the new specification in advance of the go-live date.
- ♦ Plan Participants that have not conducted testing or production reporting using the new technical specification format will receive support from CAT as the go-live date approaches.

The new technical specification will include a summary list of changes as well as a table listing the specific areas of the document where the changes have been made.

## 1.3. CAT Identifiers

CAT uses a number of identifiers, many of which readily convey their meaning from the context in which they are used. The subsections below include terms associated with the entities that will report data into CAT and their respective roles. As shown in the diagram below, Exchange ID is a subset of Participant ID, which is a subset of Reporter ID.

**Figure 1: CAT Identifier Hierarchy**

### **1.3.1.CAT Reporter ID**

Each entity which reports into CAT will be assigned a unique identifier: a CAT Reporter ID. This ID will uniquely identify each reporter, including plan participants, industry members, and associated reporting facilities. The database of CAT Reporter IDs will be made available both as a downloadable file on the CAT website and through the web portal API.

### **1.3.2.Participant ID**

The Participant ID is an ID assigned by CAT to each plan participant. The value will be the same as the participant's CAT Reporter ID.

### **1.3.3.Exchange ID**

The Exchange ID is an ID assigned by CAT to each stock/options exchange. The actual value will be the same as the exchange Participant ID and Reporter ID, but, as indicated in Figure 1, Exchange ID is a subset of Participant ID, which is a subset of Reporter ID.

### **1.3.4.Member Alias**

Each SRO will assign unique IDs to its industry members. These IDs are aliases for CAT reporters so that reporting firms can use existing identifiers when reporting market events to CAT. It is important that both the member and SRO are aware of the assigned IDs and when they should be used in reports to CAT.

Each SRO has autonomy in assigning their IDs. Note that the same ID could possibly be assigned to different industry members across SROs. Furthermore, a member may have multiple aliases assigned to them by the same SRO. Thus, the alias is only valid in combination with the SRO that assigned the ID. Specifically, when an exchange receives a routed order from one of its members, both the routing member and the exchange must report the same Member Alias in their reports to CAT in order to properly link the reports to the same order lifecycle.

An industry member can have the same alias value assigned by multiple SROs. Note that an alias is used in conjunction with an identifier that links the alias with the SRO that assigned the alias (either by explicit designation, or implicitly by context).

For example, consider three firms (Firm A, Firm B, and Firm C) and three SRO participants (Participant A, Participant B, and Participant C), and the following table of SRO-assigned member IDs.

**Table 2: Example of SRO-assigned Member IDs**

FIRM	Participant A	Participant B	Participant C
Firm A	FRMA	AAAA	FRMA
Firm B	FRMB		BBBB
Firm C	FRMC	CCCC	FRMB

Note that Member Alias FRMA is assigned to Firm A by both Participant A and Participant C, and Member Alias FRMB is assigned to two different firms by two different participants. While the same alias is used multiple times, these are valid mappings because the same alias is not assigned multiple times within a participant. Also note that Firm B is not a member of Participant B, and so there is no corresponding mapping.

Thus, each firm will have at least one alias for each SRO in which they have membership. The value may or may not be the same across all participants. When Participant A refers to Firm C, it will use the alias FRMC. Likewise, when Firm C refers to itself in relation to Participant A, it will use the alias FRMC.

Note that industry members can have multiple Member Aliases, but they will also be assigned a unique CAT Reporter ID. CAT maps the SRO-assigned Member Alias values to ensure the same unique CAT Reporter ID assigned to the member firm across SRO's. Note that member dictionary entries apply to data uploaded for the same business date as the member dictionary itself (values do not have to be the same from day to day).

## 1.4. Fundamental Data Types

The fundamental data types used in this document are described below. A complete list of data types is presented in Appendix F. Data Dictionary.

CAT will accept two kinds of text-based files: JSON and CSV. To support both JSON and CSV submissions, CAT will publish a JSON schema file which describes each data type with required representation formats, and a mapping that defines the position in a CSV representation that the data element would assume.

A schema will be provided for each data object that can be reported in both JSON and CSV.

When a data field is marked as either optional or conditional, some records may not provide values for that field. In such a case, the field is simply not reported as part of the JSON record. In a CSV record, it is reported as an empty column.<sup>2</sup>

**Table 3: Data Type Descriptions**

Data Type	JSON Type	Description
Alphanumeric	STRING	A string, composed only of letters and digits [a-zA-Z0-9].  When an Alphanumeric type is described, it will include a number, indicating the maximum length of the field. For example, Alphanumeric(7) means that the field can contain up to 7 characters
Array of XXX	ARRAY	When represented in JSON, it is an array of the indicated type (XXX is a placeholder). So, Array of Unsigned would be an array of unsigned integers, and would be represented as [ 0, 42 ].  When represented in CSV, it is a series of the indicated type, separated by the pipe symbol. So, the aforementioned array of Unsigned would be represented as 0   42.
Boolean	BOOLEAN	A value with only two choices: true or false

---

<sup>2</sup> For each CSV record, all fields up to and including the furthest of the last required field and last provided field for the record must be included. For example, consider the NOTE event in Section 3.7.1 where a number of fields are conditional or optional, including the last four fields. Each field through `noteType` (the last required field) must be provided (either with data or as an empty column). If one of the remaining non-required fields is provided, such as `Note`, then all values through `Note` must be provided.

Data Type	JSON Type	Description
Choice	STRING	A Text field, but with an explicit list of acceptable values.
Date	NUMBER	An 8-digit integer representing the date in YYYYMMDD.
Exchange ID	STRING	A subclass of Participant ID that only applies to exchanges (all participants except FINRA)
Integer	NUMBER	An integer value (positive, negative, or zero), with no decimal fraction component, in the inclusive range from -9,223,372,036,854,775,808 to 9,223,372,036,854,775,807 (the same range as a 64-bit signed integer)
Member Alias	STRING	Text(8) - one of the aliases assigned by an SRO to one of its members
Message Type	STRING	An Alphanumeric(5) field, indicating the type of message being reported
Name Value Pairs	STRING JSON Object	A value of type Text (except the pipe is allowed), composed as described in the Name Value Pairs section below
Numeric	NUMBER	<p>A general numeric type, composed of digits, an optional decimal point, followed by more digits (with an optional leading +/- sign). These values, while looking like floating point numbers, should always be read and processed in a way that represents the exact value as represented by the text. Examples: 1235, -1235, 1235.67, -1235.67</p> <p>When a numeric type is described in this document, it will include two numbers, the first is the maximum number of digits before the decimal point, and the second is the maximum number of digits after the decimal point.</p> <p>For example, Numeric(6,4) means that the number can have up to 6 digits before the decimal point and up to 4 digits after the decimal point (visual format would be #####.####). Note that these are maximum limits - the lengths can be smaller. Valid examples which comply with Numeric(6,4) would be -999999.9999, -0.1, 0, 0.0001, and 999999.99.</p> <p>All numeric values must have a whole number portion before the decimal point (e.g., 0.25 can't be represented as .25). The fractional portion is optional.</p> <p>Do not use leading zeros in numeric values. A zero should only appear as the first digit if it is the only digit before the decimal point (e.g., 0.75)</p>
Participant ID	STRING	A subclass of Reporter ID that applies only to participants
Price	NUMBER	A Price is shorthand for Numeric(10,8), which can support prices in the inclusive range [-9999999999.99999999, 9999999999.99999999]
Real Quantity	NUMBER	<p>Numeric (12,6) with up to 12 digits before the decimal point and up to 6 digits after the decimal point. The type Real Quantity should not have trailing zeros in the decimal quantities.</p> <p>For example, 100 would be accepted. Real Quantity must not be a negative value.</p>
Reporter ID	STRING	Alphanumeric(7) - a CAT Reporter ID
Symbol	STRING	Text (20)

Data Type	JSON Type	Description
Symbol Alias	STRING	Text (20) - an alias that can be assigned to a symbol
Text	STRING	<p>A string, composed of any printable character, except comma (ASCII decimal 44, hex 2C), pipe (ASCII decimal 124, hex 7C), and double quote (ASCII decimal 34, hex 22).</p> <p>When a Text type is described, it will include a number, indicating the maximum length of the field. For example, Text(7) means that the field can contain up to 7 characters.</p>
Time	NUMBER	<p>A numeric field, with a specific format conforming to what the ISO 8601 standard calls the <i>basic format</i>, with a few extra specifications.</p> <p>All 24-hour time components are mandatory (<i>i.e.</i>, hour, minute, and second as HHMMSS). The decimal-fraction part must be separated from the whole part with a period (ASCII decimal 46, hex 2E), and can contain up to 9 digits (to represent nanosecond component).</p> <p>The time zone is always Eastern Time.</p> <p>For example, 09:30:00.123456789 would be reported as 093000.123456789.</p>
Timestamp	STRING NUMBER	<p>A timestamp represents a moment in time, and contains both Date and Time, separated by the letter T (ASCII decimal 84, hex 54) or a space (ASCII decimal 32, hex 20). All time must be in Eastern Time. For example, January 7, 2017 21:30:00.123456789 in New York would be represented as the string 20170107T213000.123456789.</p> <p>As an alternative format, the timestamp can be submitted as a value of type Unsigned, representing the number of nanoseconds that have elapsed since 00:00:00 Coordinated Universal Time (UTC), Thursday, 1 January 1970, not counting leap seconds. This is also commonly known as POSIX time or UNIX time. The same point in time from the above example would be represented as the number 1483842600123456789.</p> <p>Note that the data type is different between the two formats. In JSON, the first representation requires it to be surrounded by double quotes, while the second does not</p>
Unsigned	NUMBER	An unsigned value, greater than or equal to zero, with no decimal fraction component, in the inclusive range from 0 to 18,446,744,073,709,551,615 (the same range as a 64-bit unsigned integer)

#### 1.4.1.Data Validation

All data submitted to CAT will be validated based on the defined data type of each item, including proper formatting and range checking. All File Names, Field Names, and Field Values are case sensitive. During validations, if the case does not match, an error will occur. Examples of accepted values are detailed in the table above. Valid values for Choice fields are defined in the Data Dictionary for each data element and in cases where custom values are allowed, in the Addendum to the Technical Specifications for Plan

Participants.. Valid data values, ranges, and formats will be specified in the record schema files, which will be used to validate submitted data element values. Records and values which fail validation will be marked as a failure and will be reported as feedback to the Submitting Member as detailed in Section 10.

#### **1.4.2.Name Value Pairs**

Some fields are described as containing name/value pairs. Name Value Pairs is a list of zero or more attributes, where each attribute is either a name with no value, or a name with an accompanying value such that the name and value are separated by a single equal sign (ASCII decimal 61, hex 3D). Multiple attributes are separated by the pipe symbol (ASCII decimal 124, hex 7C). If an attribute is Boolean in nature, it can optionally be represented as a name alone, where its value is implied by its presence (true) or absence (false).

The name part is the string up to the first pipe symbol or equal sign. Names must not contain commas (ASCII 44, hex 2C), pipes, equal-signs, or double-quotes (ASCII decimal 34, hex 22).

If the name terminates with a pipe, it is a Boolean value, and its presence indicates true. If the name terminates with an equal sign, the value must follow.

The value part is the string starting with the character just after the equal sign, up to either a pipe symbol or the end of the string. Values may contain an equal sign, but must not contain commas, pipes or double-quotes.

In some cases, the names are free-format (i.e., undefined). Both the name and any value are left up to the discretion of the reporter and the contents are not validated by CAT.

For example, the following JSON represents a hypothetical name/value pair field, with a Boolean attribute and a price attribute: `{ "data": "XYZ|ABC=12.55" }`

The above format works for both JSON and CSV data entry. However, when submitting data in JSON, a more native JSON style can optionally be used by assigning a JSON object as the value for a Name Value Pair attribute. Note, however, that Boolean values must be explicitly set. The above example can alternatively be submitted as: `{ "data": { "XYZ": true, "ABC": 12.55 } }`

## **2. Reference Data**

This section describes the reference or supplemental data required to be reported by each participant.

### **2.1. Member Information**

Each SRO must submit to CAT a directory of information that lists each industry member with which it has a reporting relationship. Each dictionary entry identifies a specific industry member, and assigns one or more IDs to that member. These IDs may be used by the SRO and/or the member when reporting order events to CAT. The industry members listed in the dictionary will also be participant members of the SRO, although this is not always the case. For example, each industry member that submits an order to an exchange must be a registered member of that exchange. However, the exchange may route orders to an industry member that is not a member of that exchange. In either case, the exchange must give at least one Member Alias to each industry member that appears in any of the order events reported to CAT.

Each member may have multiple aliases, but a specific Member Alias may only be assigned once per SRO. Note that the member dictionary is loaded each day, and the values only apply to that trading day. Thus, Member Aliases could be reassigned on subsequent trading days.

The Member Dictionary will be uploaded as a file of newline-delimited JSON objects, one object per member entry. The member dictionary is necessary to process other file uploads, and must be uploaded to CAT no later than T+1 at 4:00 a.m. ET, with entries sufficient to support all reports submitted on that trading day. Note that this is a same-day upload requirement whereas order events are required to be reported by 8:00 a.m. ET the following trading day.

CAT must be able to identify each IMID that operates as an ATS and must know the name under which the ATS operates. The Member Dictionary Entry does not support the provision of this information. When reporting a Member Dictionary Entry (MDE) that includes an ATS, a corresponding Member Alias Detail Entry (MADE) must also be submitted. Additionally, when reporting a Member Dictionary Entry (MDE) where the status is 'Other', a Member Alias Detail Entry (MADE) must also be submitted to provide the entity name. Note that, while any participant can submit a MADE record, it is intended for use only by participants that report ATSs to CAT, such as FINRA.

### 2.1.1.Member Dictionary Entry

**Table 4: Member Dictionary Entry**

Member Dictionary Entry (MDE)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	MDE	R
2	reporter	Reporter ID	The unique identifier assigned to the reporter by CAT	R
3	ID	Text (20)	The CRD number of the firm, if the status field directly below is set to Active, Inactive, or NonMember. Otherwise (Internal, Other), this must be an ID for the entity generated by the reporter.	R
4	status	Choice	The status of the member for the reporting date. If the status is 'Other', a corresponding MADE record must be reported for each member alias. See Data Dictionary: <code>status</code>	R
5	memberAliases	Array of Member Alias	A list of Member Alias values for the member, as assigned by this SRO, for use in association with this SRO.  A corresponding MADE record must be reported for each member alias representing an ATS.	R

Member Alias values that are used as a Routing Party for intervenue linkage must be seven (7) or fewer characters.

The following example shows a potential member dictionary for exchange Exch1 where the first entry represents an industry member that is also a member of the reporting SRO, the second entry represents an industry member that is not a member of the reporting SRO, and the third entry represents the SRO itself, with various facilities that have been given Member Alias values.

```
{
  "type": "MDE",
  "reporter": "Exch1",
  "ID": "1234567",
  "status": "Active",
  "memberAliases": [ "FRMA", "FRMA1", "FRMA:U1", "FRMA:U2" ]
}
{
  "type": "MDE",
  "reporter": "Exch1",
```

```

    "ID": "7654321",
    "status": "NonMember",
    "memberAliases": [ "FRMB" ]
  }
  {
    "type": "MDE",
    "reporter": "Exch1",
    "ID": "123xyz",
    "status": "Internal",
    "memberAliases": [ "XXX" ]
  }
  {
    "type": "MDE",
    "reporter": "Exch1",
    "ID": "123abc",
    "status": "Internal",
    "memberAliases": [ "ZZZ" ]
  }
}

```

The next example shows a potential member dictionary for exchange Exch2. Note how the same entities are members of both Exch1 and Exch2, but they may or may not have different Member Alias values with each SRO.

```

{
  "type": "MDE",
  "reporter": "Exch2",
  "ID": "1234567",
  "memberAliases": [ "FRMZ", "FRMZ:U1", "FRMZ:U2" ],
  "status": "Active"
}
{
  "type": "MDE",
  "reporter": "Exch2",
  "ID": "7654321",
  "memberAliases": [ "FRMB" ],
  "status": "Active"
}

```

### 2.1.2.Member Alias Detail Entry

**Table 5: Member Alias Detail Entry**

Member Alias Detail Entry (MADE)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	MADE	R
2	reporter	Reporter ID	The unique identifier assigned to the reporter by CAT.	R
3	ID	Text (20)	The CRD number of the firm for which the entry is being provided, or the ID for the entity generated by	R

Member Alias Detail Entry (MADE)				
#	Field Name	Data Type	Description	Include Key
			the reporter. Must also appear in an MDE event.	
4	memberAlias	Member Alias	Member Alias of the member for the MADE submission. Must also appear in an MDE event for the corresponding ID.	R
5	ats	Boolean	Indicates that the memberAlias is an ATS.	C
6	name	Text (128)	The doing-business-as (DBA) name of the ATS; required when ats is true. OR The name of the entity; required when the status of the corresponding MDE is 'Other'.	R

The following example shows a member dictionary for exchange Exch2 where one of the aliases represents an ATS. Note that the ID and memberAlias in the MADE record matches the data provided in the MDE record.

```
{
  "type": "MDE",
  "reporter": "Exch2",
  "ID": "7654321",
  "status": "Active"
  "memberAliases": [ "ATSA", "FRMA", "FRMA1", "FRMA:U01", "FRMA:U02" ]
}
{
  "type": "MADE",
  "reporter": "Exch2",
  "ID": "7654321",
  "memberAlias": "ATSA",
  "ats": true
  "name": "ATS Alpha"
}
```

## 2.2. Equity Symbols

FINRA CAT maintains a symbol master for CAT reportable equity securities.<sup>3</sup>

### 2.2.1. CAT Symbol Master

The CAT Equity Securities Symbol Master is published on the CAT NMS website at

<https://www.catnmsplan.com/reference-data>, for use by Industry Members in reporting. FINRA CAT

---

<sup>3</sup> The symbol master is maintained based on a data feed provided by FINRA independently from FINRA's reporting obligation as a CAT Plan Participant.

publishes a Start-of-Day (SOD) file by 6:00 a.m. ET daily, an End of Day (EOD) file by 6:00 p.m. ET, and intraday updates approximately every two hours during the business day. Information including file descriptions, file layouts, and retrieval instructions can also be found on that page. Additionally, the data is available to the Plan Participants via the CAT Query Tools.

### **2.3. Corporate Actions**

FINRA CAT provides details for equity corporate actions impacting equities <sup>4</sup> and options <sup>5</sup>.

### **2.4. Options Dictionary**

Naming conventions for options can vary among exchanges and trading firms. To reduce confusion and simplify reporting, CAT allows reporters to submit options reports using a unique ID of type Text(40), as defined by the reporter, for each option. However, each reporter must upload a dictionary every day for which it reports option quote/order events. The dictionary is valid only for events reported on the same business day.

The options dictionary shall include simple option entries and complex option entries, to cover all options utilized in any report submitted to CAT by that reporter on a given date. This file is composed of a series of dictionary entries for each option, with the Option ID that will be used by the reporter for all option reports done on that day.

Each Option ID defined in the dictionary must be unique for that reporter on that day, across all simple and complex options. As for reportable order events, Options Dictionary entries can be uploaded throughout the day. When uploaded files are processed, option dictionary files are processed before any order event files for the same uploaded timeframe. Entries can be added dynamically throughout the day.

---

<sup>4</sup> Corporate Actions for listed equities are received via a data feed provided by FINRA independently from FINRA's reporting obligation as a CAT Plan Participant.

<sup>5</sup> Corporate Actions for listed options are retrieved from the Options Clearing Corporation (OCC).

Note that this is not the product definition, but a universal way to reference an options product for the purposes of reporting order events to CAT.

While the Options Dictionary is necessary to process plan participant data, the Processor uses Options Clearing Corporation (OCC) files to generate the Start of Day and End of Day Options Symbol Master files available to support reporting by Industry Members. In the event an exchange supports options products that are not available in the OCC data set (e.g., FLEXPCT products), CAT requests that the exchange submit those products to CAT by 6:00 p.m. ET on T+0, for inclusion in the End of Day Options files for industry member reporting.

The options dictionary is uploaded as a file of newline delimited JSON objects.

#### 2.4.1.Option Series Dictionary Entry

The dictionary mapping for an option series (i.e., flex or simple) will contain the information provided in Table 6: Simple Option Series Dictionary Entry, which allows options events to be reported using the Option ID reported in the dictionary entry.

**Table 6: Simple Option Series Dictionary Entry**

Simple Option Series Dictionary Entry (OSDE)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OSDE	R
2	reporter	Reporter ID	The unique identifier assigned to the reporter by CAT	R
3	optionID	Text (40)	The unique ID assigned to this option by this reporter. No other simple/complex/flex option should receive the same ID. All reports from this reporter will use this ID to reference a particular option product	R
4	kind	Choice	Specifies if an option is a simple, complex, flex, or percentage denominated flex option. For the value FLEXPCT, the strike price and order prices of the option are in percentages.  See Data Dictionary: <code>kind</code>	R
5	optionsSymbol	Text (14)	The option class or symbol for the series (as known by OCC)	R
6	primaryDeliverable	Symbol	The symbol for the primary deliverable component of the option, provided in the symbology of the listing	R

Simple Option Series Dictionary Entry (OSDE)				
#	Field Name	Data Type	Description	Include Key
			exchange or a valid alias.	
7	underlyingType	Choice	This field specifies whether a simple option series has an equity or index as its underlying. The underlying type mapping is consistent with the same mapping used at OCC (e.g., ETF is treated as Equity and WCO is treated as Index).  See Data Dictionary: <code>underlyingType</code>	R
8	expirationDate	Date	The date that the contract will expire	R
9	strikePrice	Numeric (10,8)	The dollar and decimal value of the strike price. If option kind = FLEXPCT, this will be the percentage	R
10	putCall	Choice	Specifies if this simple option or option leg is a put or call.  See Data Dictionary: <code>putCall</code>	R
11	exerciseStyle	Choice	Specifies the exercise style of the Option Series  See Data Dictionary: <code>exerciseStyle</code>	R
12	settlement	Choice	Specifies the settlement of the option  See Data Dictionary: <code>settlement</code>	R
13	testSeriesFlag	Boolean	Indicates that the entry represents a test symbol. Events submitted for a test symbol are excluded from linkage processing.	C

For example, the following dictionary entry would be for the January 19, 2018 150.0 Put for BRK class B.

Note that the primary deliverable is reported in NYSE symbology because BRK.B is listed on NYSE.

```
{
  "type": "OSDE",
  "reporter": "MYID",
  "optionID": "12345",
  "kind": "Standard",
  "optionsSymbol": "BRKB",
  "primaryDeliverable": "BRK.B",
  "underlyingType": "Equity",
  "expirationDate": 20180119,
  "strikePrice": 150.00,
  "putCall": "Put",
  "exerciseStyle": "American",
  "settlement": "PM"
}
```

### 2.4.2.Option Symbol Changes

Changes to symbols stemming from corporate actions can be handled by reporters using Dictionary Entries. Each options exchange should ensure that on the effective date for a corporate action, its Dictionary Entries accurately reflect option symbols with the appropriate numerical suffix when applicable, and it includes any new option symbols created as the result of the corporate action. A detailed corporate action example follows:

Stock ABCD undergoes a 2 for 1 stock split on June 1, 2018. All strike prices are halved, the deliverable remains 100 and the symbol is unchanged. On August 1, 2018 stock ABCD spins off company EFGH, 10 shares per 100 ABCD owned. On the market opening at ex-date all open interest in ABCD corp. is moved to symbol ABCD1 delivering 100 shares of ABCD and 10 shares of EFGH. Option symbol  $ABCD1 = 100 \text{ ABCD} + 10 \text{ EFGH}$ . Subsequently, ABCD and EFGH shares are each listed in the underlying cash market and their prices are used in the valuation of options ABCD1 respectively. The options exchanges list new option contracts for each underlying that deliver 100 shares using symbols ABCD and EFGH (assuming listing criteria is met). Options symbols ABCD and EFGH begin trading (independently) and each delivers 100 shares of the corresponding stock upon exercise. On November 1, 2018 ABCD undergoes a 3 for 2 stock split. Option contracts in ABCD and ABCD1 are affected. Contracts in ABCD become ABCD2 delivering 150 shares of underlying stock ABCD. Option symbol  $ABCD2 = 150 \text{ ABCD}$ . Contracts in ABCD1 remain ABCD1 and deliver 150 shares ABCD and 10 shares EFGH. Option symbol  $ABCD1 = 150 \text{ ABCD} + 10 \text{ EFGH}$ . The exchange will again list a new ABCD delivering 100 shares of ABCD stock upon exercise.

Considering the example above, the two entries below demonstrate the values before and after the first corporate action event:

Stock ABCD undergoes a 2 for 1 stock split on June 1, 2018. All strike prices are halved, the deliverable remains 100 and the symbol is unchanged.

Before 2:1 Stock Split on June 1, 2018

```

"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Standard",
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 45.00,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}

```

#### After 2:1 Stock Split on June 1, 2018

```

{
"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Standard",
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 22.50,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}

```

The next entries demonstrate the impact of the second corporate action event – the spinoff on August 1, 2018.

On August 1, 2018 stock ABCD spins off company EFGH, 10 shares per 100 ABCD owned.

On the market opening at ex-date all open interest in ABCD corp. is moved to symbol ABCD1 delivering 100 shares of ABCD and 10 shares of EFGH. Option symbol ABCD1 = 100 ABCD + 10 EFGH. Subsequently, ABCD and EFGH shares are each listed in the underlying cash market and their prices are used in the valuation of options ABCD1 respectively. The options exchanges list new option contracts for each underlying that deliver 100 shares using symbols ABCD and EFGH (assuming listing criteria is met). Options symbols ABCD and EFGH begin trading (independently) and each delivers 100 shares of the corresponding stock upon exercise.

Before Spinoff - Note that at this time, EFGH is still part of ABCD.

```
{
"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Standard",
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 45.00,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
```

After Spinoff – three Dictionary Entries would now be reported as the result of this corporate action:

```
{
"type": "OSDE",
"reporter": "MYID",
"optionID": "4322",
"kind": "Non-Standard",
"optionsSymbol": "ABCD1",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 22.50,
"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
{
"type": "OSDE",
"reporter": "MYID",
"optionID": "99123",
"kind": "Standard",
"optionsSymbol": "EFGH",
"primaryDeliverable": "EFGH",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 5.00,
"type": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}
{
"type": "OSDE",
"reporter": "MYID",
"optionID": 99124,
"kind": "Standard",
"optionsSymbol": "ABCD",
"primaryDeliverable": "ABCD",
"underlyingType": "Equity",
"expirationDate": 20181221,
"strikePrice": 17.50,
"putCall": "Call",

```

```

"exerciseStyle": "American",
"settlement": "PM"
}

```

The pre- and post-Spinoff JSON Dictionary Entries shown above are also shown in table format below.

**Table 7: Pre- and Post-Spinoff JSON Dictionary Entries**

Field Name	Pre-Spinoff Value	Post-Spinoff		
		Entry #1 Value	Entry #2 Value	Entry #3 Value
Exchange ID	CBOE	CBOE	CBOE	CBOE
Option ID	4322	4322	99123 (new unique id)	99124 (new unique id)
Option Kind	Standard	Non-standard	Standard	Standard
Underlying Type	Equity	Equity	Equity	Equity
Primary Deliverable	ABCD	ABCD	EFGH	ABCD
Option Symbol	ABCD or ABCD181221C00022500  <i>Note: EFGH is still part of parent company ABCD</i>	ABCD1 or ABCD181221C00022500  <i>Note: Delivery components of ABCD1 include 10 shares of EFGH. CAT will know this since ABCD1 is the symbol used by OCC.</i>	EFGH or EFGH81221C00005000  <i>Note: This a new standard option as of Aug 1, 2018 which delivers 100 shares of the new standalone company EFGH. Investors will price the underlying and the options accordingly.</i>	ABCD or ABCD181221C00017000  <i>Note: This is a new standard option as of Aug 1 2018, which delivers 100 shares of the parent company ABCD that remains after EFGH was spun off. Investors will price the underlying and the options accordingly.</i>
Expiration Date	20181221	20181221	20181221	20181221
Option Put/Call Code	C	C	C	C
Strike Price	22.50	22.50	5.00	17.50
Exercise	American	American	American	American

Field Name	Pre-Spinoff Value	Post-Spinoff		
		Entry #1 Value	Entry #2 Value	Entry #3 Value
Style				
Settlement	PM	PM	PM	PM

A final example demonstrates the impact of the third corporate action event – the stock split on November 1, 2018.

On November 1, 2018 ABCD undergoes a 3 for 2 stock split. Option contracts in ABCD and ABCD1 are affected. Contracts in ABCD become ABCD2 delivering 150 shares of underlying stock ABCD. Option symbol ABCD2 = 150 ABCD. Contracts in ABCD1 remain ABCD1 and deliver 150 shares ABCD and 10 shares EFGH. Option symbol ABCD1 = 150 ABCD + 10 EFGH. The exchange will again list a new ABCD delivering 100 shares of ABCD stock upon exercise.

Before 3:2 Stock Split -- ABCD delivers 100 shares of ABCD. ABCD1 options deliver 100 shares of ABCD + 10 shares EFGH.

```
{
  "type": "OSDE",
  "reporter": "MYID",
  "optionID": "4322",
  "kind": "Non-Standard",
  "optionsSymbol": "ABCD1",
  "primaryDeliverable": "ABCD",
  "underlyingType": "Equity",
  "expirationDate": 20181221,
  "strikePrice": 22.50,
  "putCall": "Call",
  "exerciseStyle": "American",
  "settlement": "PM"
}
{
  "type": "OSDE",
  "reporter": "MYID",
  "optionID": "99124",
  "kind": "Standard",
  "optionsSymbol": "ABCD",
  "primaryDeliverable": "ABCD",
  "underlyingType": "Equity",
  "expirationDate": 20181221,
  "strikePrice": 22.50,
```

```

"putCall": "Call",
"exerciseStyle": "American",
"settlement": "PM"
}

```

After 3:2 Stock Split - ABCD becomes ABCD2 and delivers 150 shares of ABCD. Symbol ABCD1

remains, though now delivers 150 shares ABCD and 10 shares EFGH. The exchange lists new, standard ABCD options that deliver 100 shares of ABCD.

```

{
  "type": "OSDE",
  "reporter": "MYID",
  "optionID": "4322",
  "kind": "Non-Standard",
  "optionsSymbol": "ABCD1",
  "primaryDeliverable": "ABCD",
  "underlyingType": "Equity",
  "expirationDate": 20181221,
  "strikePrice": 22.50,
  "putCall": "Call",
  "exerciseStyle": "American",
  "settlement": "PM"
}
{
  "type": "OSDE",
  "reporter": "MYID",
  "optionID": "99124",
  "kind": "Non-Standard",
  "optionsSymbol": "ABCD2",
  "primaryDeliverable": "ABCD",
  "underlyingType": "Equity",
  "expirationDate": 20181221,
  "strikePrice": 22.50,
  "putCall": "Call",
  "exerciseStyle": "American",
  "settlement": "PM"
}
{
  "type": "OSDE",

  "optionID": 100501,
  "kind": "Standard",
  "optionsSymbol": "ABCD",
  "primaryDeliverable": "ABCD",
  "underlyingType": "Equity",
  "expirationDate": 20181221,
  "strikePrice": 15.00,
  "putCall": "Call",
  "exerciseStyle": "American",
  "settlement": "PM"
}

```

### 2.4.3.Complex Option Dictionary Entry

The dictionary mapping for a complex option will contain the information presented in the table below.

Each complex option can contain multiple legs, where each leg is either an option leg or a stock leg

(stock leg will generically refer to equity/exchange-traded fund "ETF").

**Table 8: Complex Option Dictionary Entries**

Complex Option Dictionary Entry (CODE)					
#	Field Name		Data Type	Description	Include Key
1	type		Message Type	CODE	R
2	reporter		Reporter ID	The unique identifier assigned to the reporter by CAT	R
3	optionID		Text (40)	The unique ID assigned to this option by this reporter. No other simple/complex/flex option should receive the same ID. All reports from this reporter will use this ID to reference a particular option product	R
4	kind		Choice	Specifies if an option is a simple, complex, flex, or percentage denominated flex option.  For this message type, the kind will always be “Complex”.  See Data Dictionary: <code>kind</code>	R
5	groupID		Text (40)	An identifier supplied by the user/reporter, to be associated with this entry. The value of the field is not checked by CAT, but it will be stored, and can be used to search for dictionary entries that have the same value	O
6	legs	legType	Choice	Defines the type of leg.  See Data Dictionary: <code>legType</code>	R
		side	Choice	The side of the order:  See Data Dictionary: <code>side</code>	R
		ratio	Unsigned	The ratio quantity for this leg, relative to the other legs. For option legs, the ratios must already be reduced to the smallest units possible	R
		optionID	Text (40)	The ID of the option - <b>for option legs only</b> . Note that the Option ID for the leg must have already been uploaded before using it in the definition of a complex option. Furthermore, the combination of Option ID / Side must be unique among all legs	C
		symbol	Symbol	The symbol of the equity, in the symbology of the listing exchange - <b>for equity legs only</b> . The same	C

Complex Option Dictionary Entry (CODE)					
#	Field Name		Data Type	Description	Include Key
				symbol must not appear in more than one leg. Multiple symbol legs are only allowed for index options only	
7	testSeriesFlag		Boolean	Indicates that the entry represents a test symbol. Events submitted for a test symbol are excluded from linkage processing.	C

The Option ID must be unique. Duplicate dictionary entries are ignored. Entries that have the same Option ID, but different details are rejected. Any entry which defines the opposite side of an existing entry will be rejected. For example, a complex option dictionary entry to Buy one (1) contract of option 1234 and Sell two (2) contracts of option 4321 is considered to be the "opposite side" of an entry to Sell one (1) contract of option 1234 and Buy two (2) contracts of 4321. Thus, if both were submitted the second would be rejected.

### **JSON Example**

```
{
  "type": "CODE",
  "reporter": "MYID",
  "kind": "Complex",
  "optionID": "98765",
  "legs": [
    {
      "legType": "Option",
      "side": "Buy",
      "ratio": 1,
      "optionID": "121345"
    },
    {
      "legType": "Equity",
      "side": "Buy",
      "ratio": 100,
      "symbol": "ABCD"
    }
  ]
}
```

### **JSON Example of reject**

```
{
  "type": "CODE", "reporter": "MYID", "kind": "Complex",
  "optionID": "98765",
  "legs": [
```

```

    { "legType": "Option", "side": "Buy",
      "ratio": 1, "optionID": "121345"
    },
    { "legType": "Option", "side": "Sell",
      "ratio": 2, "optionID": "99999"
    }
  ]
}
{
  "type": "CODE", "reporter": "MYID", "kind": "Complex",
  "optionID": "56789",
  "legs": [
    { "legType": "Option", "side": "Sell",
      "ratio": 1, "optionID": "121345"
    },
    { "legType": "Option", "side": "Buy",
      "ratio": 2, "optionID": "99999"
    }
  ]
}

```

## 2.5. Market Maker Information

Each Equity SRO must submit to CAT a directory of information that lists industry member with which it has a reporting relationship and where the member makes a market in one or more equity symbols. Each Market Maker Dictionary entry identifies a specific industry member, symbol, market maker type, status and status time. The Market Maker may make a market in one or more symbols.

The Market Maker dictionary is loaded each day, and the data values only apply to that trading day. The Market Makers, their assigned Symbols, Market Maker Type, and Status may change on subsequent trading days.

The Market Maker Dictionary will be uploaded as a file of newline-delimited JSON objects, one object per Market Maker entry. The Market Maker dictionary must be uploaded to CAT no later than T+1 at 4:00 a.m. ET.

**Table 9: Market Maker Dictionary Entry**

Market Maker Dictionary Entry (MMDE)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	MMDE	R

Market Maker Dictionary Entry (MMDE)				
#	Field Name	Data Type	Description	Include Key
2	reporter	Reporter ID	The unique identifier assigned to the reporter by CAT	R
3	marketMaker	Member Alias	Identifier assigned to a member by the SRO as provided in the Member Dictionary	R
4	symbol	Symbol	Equity Symbol in listing market format, in which the Market Maker is registered on the exchange	R
5	marketMakerType	Market Maker Type	A list of exchange defined values for the Equity Market Maker distinguishing between types or designations of market makers.  See Data Dictionary: <code>marketMakerType</code>	R
6	marketMakerStatus	Choice	The status of the member/symbol for the reporting date. For details, see the Data Dictionary entry for Status  See Data Dictionary: <code>marketMakerStatus</code>	R
7	statusTime	Timestamp	Time of change in market maker's status.  If one record for a member alias and symbol combination is provided, it is assumed to be active for the entire day. For market making initiations not at the open, provide the start time.	R
8	definedMMDEData	Name/Value Pair	A list of key/value pairs, providing machine parseable exchange specific regulatory context data for the Equity Market Maker. The attributes are not defined in the spec, and can be any values as long as they conform to the format for a list of name/value pairs as defined under the Fundamental Data Types section of this document.	O

The following example shows a Market Maker for exchange Exch1 where the first entry represents an industry member with one active symbol and another inactive.

```
{
  "type": "MMDE",
  "reporter": "Exch1",
  "marketMaker": "ABCD",
  "symbol": "PZ",
  "marketMakerType": "MM",
  "status": "Active",
  "statusTime": "20200714022015.123456789"
}
{
  "type": "MMDE",
  "reporter": "Exch1",
```

```
"marketMaker": "ABCD",  
"symbol": "PX",  
"marketMakerType": "MM",  
"status": "Inactive",  
"statusTime": "20200714022216.123456789"  
}
```

### 3. Special Data Elements and Common Events

This section describes data elements that are common to most order events, including timestamps, sequence numbers, symbols, material terms of an order, and elements used during the CAT process of creating order lifecycles.

Events that are universal, or common, are also described in this section.

#### 3.1. Timestamps and Sequence Numbers

All timestamps are required to be reported in the greatest granularity in use by the reporter's trading platform, up to nanoseconds. While the timestamp generally allows the system to properly sequence events within the lifecycle of an order event, it is possible for multiple events to have the same timestamp, especially if the granularity of the reported timestamp is insufficient. In these cases, the system cannot confidently sequence the events by timestamp alone. When it is possible for multiple events --- from the same reporter, on the same day <sup>6</sup>, in the same symbol --- to have the same timestamp, a sequence number must also be provided for each event.

The sequence number is required to be strictly increasing, and must guarantee proper sequencing of events in the order in which they originally occurred. The sequence number may be globally unique, in which case it provides sequencing unilaterally; however, this is not required. The sequence number does not sequence events across multiple reporters.

The system only uses the sequence number if two or more events have the same timestamp. If the timestamp alone provides the ability to determine the proper order of the events, the sequence number does not need to be reported.

---

<sup>6</sup> For purposes of 24-hour trading, a "day" is considered to be a single cycle date. See the definition of `cycleDate` in Appendix F:

Data Dictionary for additional details.

### **3.1.1. Sequence Number Subsystems**

The purpose of the sequence number is to allow regulators to sequence multiple events that have the same timestamp. However, reports for the same reporter/date/symbol may originate from multiple systems, and it may be difficult to coordinate a sequence number that is unique among all subsystems.

In such cases, a sequence number subsystem (`seqNumSub`) can be optionally reported along with the sequence number. This value can be examined to better determine ordering characteristics of the events that have the same timestamp value.

### **3.1.2. Time of Order Receipt**

The time of order receipt is the time at which an exchange Participant assigns an Order-ID to an incoming message.

## **3.2. Symbology**

When reporting events for equities, the symbol must be reported in the symbology of the listing exchange or using an alternate symbology identified in the symbol master as described in Section 2.2.

Any reporter who reports options events must submit an option dictionary to CAT. All options are identified using the Option ID, as provided to CAT in the reporter's option dictionary.

## **3.3. NBBO**

The NBBO is provided with each relevant order event (i.e., when available). This is the NBBO from the perspective of the reporter at the time of the event, but not including the effect that the event would have on the NBBO. For example, if the NBBO were 100@10.10 x 100@10.15, and a new order arrived at the exchange to BUY 100@10.10, the reported NBBO would be 100@10.10 x 100@10.15, even though the immediate effect of the order would be to change the best bid to 200@10.10.

Note that the bid/ask prices are required, but the quantities being bid or offered are optional.

There exist some special cases where the NBBO is unavailable or nonexistent. In those cases, the NBBO values should be reported with a zero price and zero quantity. An entry with both the price and quantity of

zero will indicate that the data was either unavailable or not applicable for that particular event. Note that the values can't just be reported as unavailable because it is hard to acquire them. They must truly be unavailable or not applicable to that particular event. NBBO prices are not required for leg-level events of complex orders and zero may be provided in lieu of a quote price.

### **3.4. Order Linkage and Lifecycle**

When all members have submitted their reports to CAT for a given trading day, CAT will link all reportable events to create a complete lifecycle of each order. A key part of being able to connect the orders is recognizing and connecting the daisy chain of orders across all CAT reporters. In order to accomplish this, both the reporter routing an order away and the reporter accepting the order must report the exact same details about the order.

Of particular interest to reporting participants, the data elements important to creating cross-reporter order linkages are: Exchange ID, Date, Symbol/Option, Routing Party, Routed Order ID, and Session ID.

When an order is routed to an exchange, each communication protocol specifies a way to uniquely identify that order (e.g., FIX protocol calls it ClOrdId, OUCH calls it Order Token). However, the uniqueness guarantees differ from protocol to protocol. Some exchanges may assign a unique Member Alias for each account, and require uniqueness based on the account ID and order ID alone. Others may issue special identifiers for each API session that the member uses to connect into the exchange. Since there is no universally accepted method, CAT uses a combination of several different attributes that provide flexibility in ensuring globally unique order IDs across all known supported protocols.

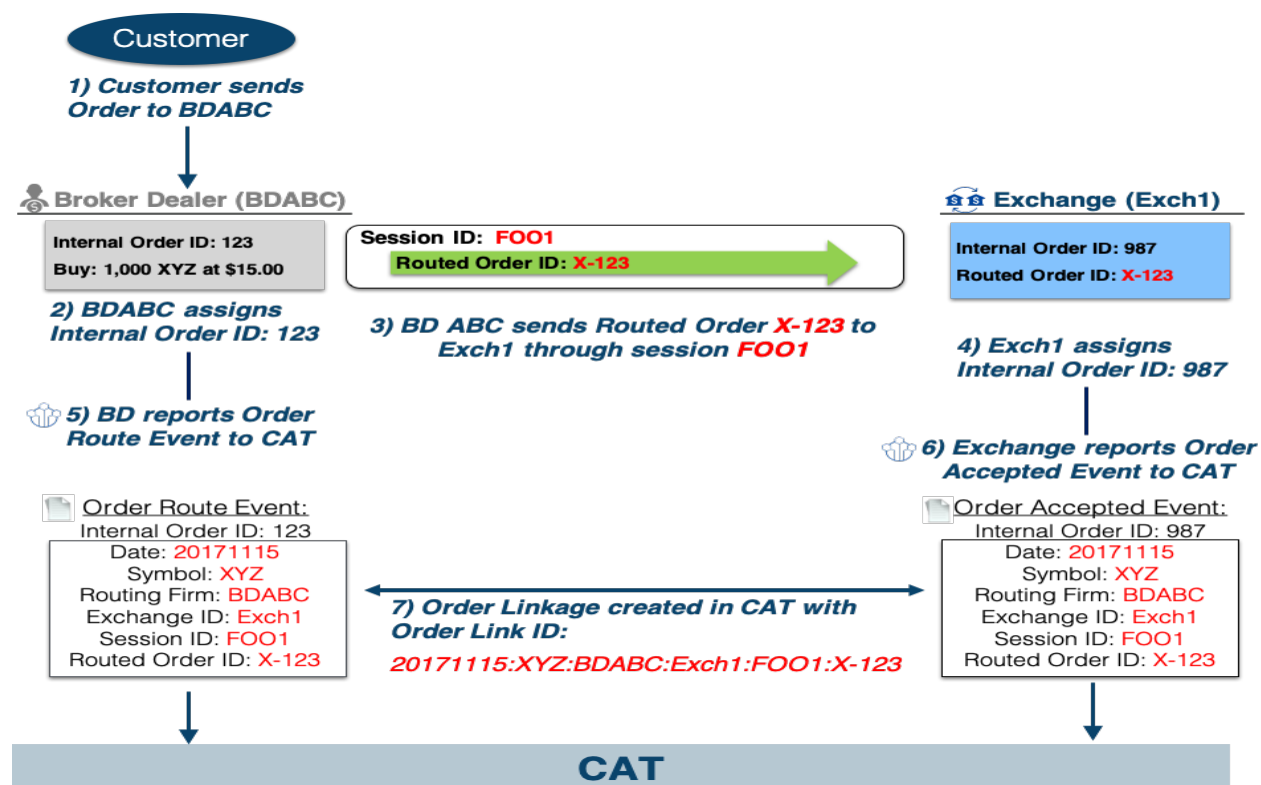

Both the routing firm — once industry member reporting has commenced — and the exchange will submit information to CAT in their Order Route and Order Accepted reports. Note that exchange and industry member Routed Order ID, Routing Party, and Session ID must exactly match between in order for CAT to accomplish the linkage process.

The Routed Order ID is the unique order identifier sent in the API message going from the routing entity to the destination entity.

The Routing Party is a text string that the exchange has assigned to the firm routing the order. Complexity arises when a member is assigned multiple values by the exchange. The determination as to which value is used by both parties depends on protocol-specific information. The text string must be a Member Alias of seven (7) or fewer characters. It can be any string, so long as both the sender of the order and the exchange agree on using the same string for their orders.

The Session ID is also exchange-assigned, usually a unique login account, an actual protocol session name, IP/port combination, or some other means of identifying a particular API session. The Session ID identifies the specific session used to route the order. Even in cases where there is only one session in use between reporters, the same non-empty value must be reported in the session field by both parties.

CAT, in cooperation with each exchange, shall determine how the Routing Party, Routed Order ID, and Session ID are derived for each API supported by the exchange. This guidance will be documented and published on the CAT website.

## Figure 2: Order Linkage and Lifecycle

### 3.5. Material Terms of an Order

The material terms of an order include but are not limited to price, quantity, side, order type, open/close indicator (for options), time in force, and special handling instructions. Each order event includes fields for each of these.

However, each exchange offers significant distinguishing features and instructions to describe how orders are to be handled. These differences are mainly captured in the possible values for the order type and any special handling instructions. The CAT system is generally agnostic to these values, and their primary utility is in how they are interpreted and used in surveillance activities.

In order to provide utility in using the reported data for surveillance purposes, both the reporters and the users must have well known definitions of the data being reported. In addition, without specific definitions, the submitted data cannot be checked for integrity in those fields that comprise the material terms of an order. Thus, every possible value for each field must be explicitly defined both in this specification and the separate specification document for industry members<sup>7</sup>. Every value that could possibly be reported must be well-defined in the technical specifications. CAT maintains the technical specifications for both the participants and industry members to reflect changes to order types and/or handling instructions over time. Each exchange must provide guidance to CAT on how these values are determined for each of their system interfaces, with lead time sufficient to allow CAT to update the specifications for both participants and industry members.

#### 3.5.1. Order Types

The Order Type for each order must be assigned with exactly one value from a predefined set of choices. These choices are documented in the data dictionary entry for Order Type (see Appendix F). CAT, in

---

<sup>7</sup> Industry Members must also report the material terms of the order on their route reports

cooperation with each exchange, has defined a list of acceptable values for this field, however additional order types may be added to accommodate future market needs.

The CAT website contains guidance on how these choices can be determined for each exchange API.

### **3.5.2. Order Handling Instructions**

The Handling Instructions field defines special instructions as to how the order should be handled by the exchange. Neither SEC Rule 613, nor the CAT NMS Plan dictate the special handling instructions that must be supported. Furthermore, each exchange may use different names and values to describe how orders are handled, and there can be numerous customized special handling instructions. While the CAT processor must be able to support any instructions which are required to be reported, mandating specific instructions is beyond the scope of the CAT processor as that information is only known by the exchanges and the appropriate surveillance and regulatory entities. Thus, the allowed values for this field support a wide array of special handling instructions. Order Handling Instructions' values must be documented in the data dictionary of this technical specification, and guidance must be provided to CAT by reporters for how these values can be determined based on each exchange API. Guidance will be subsequently posted on the CAT website.

The Handling Instructions field can specify as many special handling instructions as apply for that order (or be empty if no such instructions apply). Thus, the handling instructions field will be a list of name/value pair.

Note that the full intent of the order is reportable to CAT. At a minimum, every term and/or instruction for an order that is communicated to the exchange must be reported to CAT. It can be reported as part of the standard set of material terms, or via one of the defined name/value pairs as defined in the Handling Instructions section of the Data Dictionary. Reporters cannot choose which order instructions to report: they must report every instruction applicable to each order.

Note that the Order Handling Instructions field is marked as 'conditionally required' in the event definitions, because its existence is not enforced by the system. If the order does not have any characteristics that are reportable to CAT, then the field does not have to be provided. However, if there

are any explicit or implied handling instructions for the order, then this effectively becomes a required field, as all instructions must be reported.

For example, assume two hypothetical handling instructions: AON and WDS=<percent>; where AON means all-or-none and WDS means a discretion price is allowed to be less than or equal to some percentage of the spread. If an order were to be placed as all-or-none, with a discretion of up to 50 percent of the spread, then the Order Handling Instructions field would contain "AON|WDS=50" as its value.

This approach provides flexibility for exchanges, enabling them to represent a wide array of handling instructions, while also enabling CAT to validate submitted data and providing regulators a defined structure for interpretation of the data.

### 3.6. Optional, Required, and Conditional Fields

Subsequent sections describe event types and their fields. Each field will be notated with the abbreviation R, O, C, or r to represent whether it is required, optional, conditional, or required conditionally. This codification will be present in the last column of each table describing an event.

**Table 10: Optional, Required and Conditional Fields**

Type	Abbreviation	Description
Optional	O	Optional for the event, may be included at the discretion of the reporter
Conditional	C	Conditional fields may be required depending on the contents of the event. For example: in the note event, quoteID and orderID are conditional fields. If the note event is on a quote, then quoteID is required, if the note event is on an order, then orderID is required
Required	R	Required for the event, must always be included. For example, the field "type" is always required.
Required Conditionally	r	This is a special category of fields that currently applies to options only. Specifically, fields marked as 'r' are required if the event applies to a simple option order, but they are conditional if the event applies to an option order that is part of a complex order

## 3.7. Common Events

### 3.7.1.Note Event

The Note Event is a generic event that accommodates reporting for events that are not defined with explicit events. For example, there could be certain events that occur in the process of handling an order on the floor of an exchange that may be desired to be included in the trail of events for a particular order, but don't fit into an explicitly defined reportable event. In another example, there could be a certain process that the order goes through as part of its handling that does not constitute a change in terms of the order, but may be beneficial as part of the order's audit trail.

The Note event requires either an Order ID or a Quote ID (but not both), so that the notation can be appropriately linked by CAT to the associated order/quote. If the note relates to a stock order, then both orderID and symbol are required. If the note relates to an option order/quote then both optionID and orderID/quoteID are required.

**Table 11: Note Event**

Note (NOTE)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	NOTE	R
2	reporter	Reporter ID	The identifier for the reporter that generated the note	R
3	eventTimestamp	Timestamp	The date/time of the event being noted	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The symbol of order; for a stock order	C
7	optionID	Text (40)	The ID of the option; for an option order/quote	C
8	quoteID	Text (40)	The ID of the quote on which the note is being placed, only applicable if the note is related to a quote	C

Note (NOTE)				
#	Field Name	Data Type	Description	Include Key
9	orderID	Text (40)	The ID of the order on which the note is being placed, only applicable if the note is related to an order	C
10	noteType	Choice	One of several predefined types of notation events, providing a way to classify or categorize notations.  See Data Dictionary: <code>noteType</code>	R
11	definedNoteData	Name Value Pairs	A list of key/value pairs, providing machine parseable data for the notation.  See Data Dictionary: <code>definedNoteData</code>	O
12	undefinedNoteData	Name Value Pairs	A list of key/value pairs, providing machine parseable data for the notation. The attributes are not defined in the spec, and can be any values as long as they conform to the format for a list of name/value pairs as defined under the Fundamental Data Types section of this document.	O
13	note	Text (255)	A free-form text field to describe the notation for the event	O
14	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

The Note Type and Defined Note Data fields are well-defined and must conform to the permitted values as described in this specification. The Undefined Note Data can accommodate any attributes, as long as the field conforms to the format for a list of name/value pairs.

Thus, Note Events, while generic in nature, can be parsed and evaluated by both humans and computer programs.

Linkage Keys for **NOTE**:

**Order Key:** date, reporter, symbol, orderID

**Order Key:** date, reporter, optionID, orderID

**Quote Key:** date, reporter, optionID, quoteID

### 3.7.2. Self-Help Declarations

“Self-help” declarations allow market participants to disregard the protected quotations of trading centers that are experiencing systems problems such as failure, material delay, or malfunction.

Participants must report to CAT any self-help declarations they make. If a self-help declaration is carried over to the next day, it must be reported again on that day. The following data is required to be reported for Self-Help declarations:

**Table 12: Self-Help Declaration**

Self-Help Declaration (SHD)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	SHD	R
2	reporter	Reporter ID	Identifier of reporter declaring self-help	R
3	declaredTimestamp	Timestamp	Date and time self-help was declared	C
4	revokedTimestamp	Timestamp	Date and time self-help was revoked. Self-help declarations must be reported each day. If self-help is not revoked by the end of the day, this field may be left unreported or can be set to the closing time. However, another self-help event must be reported for the next day	C
5	awayExchange	Exchange ID	Exchange affected by self-help event	R

Self-Help Declaration (SHD)				
#	Field Name	Data Type	Description	Include Key
6	comments	Text (255)	Comments related to self-help event	O
7	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

Both the declared and revoked timestamps can be reported in one single event by including both declaredTimestamp and revokedTimestamp. Alternatively, the declaration and revocation can be reported independently by just including the relevant timestamp in separate events.

### 3.7.3. Supplemental Trade Event

Each trade event (stock and option) contains some information which may not be readily available when generating the trade event. Thus, an independent event can be submitted to augment the information in the trade event. These events can be submitted in the same file as other events or in a separate file.

These events will not be recorded as separate events in CAT. Rather, the information in these events will be merged with the appropriate trade event to provide data that may have been missing in the original trade event. Currently, only the saleCondition can be reported in this way. Supplemental Trade Events must be received within the four day processing window (e.g., by T+4 at 8:00 a.m. ET) in order to update the trade event.

This event is used for stock and option trades. If the trade references a stock, then the symbol field must be provided. If the trade references an option, then the optionID field must be provided.

The description uses "trade" in a general manner. If the event references a trade, the tradeID field is required. If the event references a fill, the fillID and side are required.

**Table 13: Supplemental Trade Event**

Supplemental Trade Event (STE)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	STE	R
2	exchange	Exchange ID	The ID of the exchange where the trade took place	R
3	tradeID	Text (40)	The tradeID from the original trade event	C
4	fillID	Text (40)	The fillID from the original fill event	C
5	optionID	Text (40)	The ID of the option being traded	C
6	symbol	Symbol	The symbol for the stock being traded	C
7	side	Choice	Side of the executed trade (required when fillID is used)  See Data Dictionary: <a href="#">side</a>	C
8	saleCondition	Text (8)	Conditions under which trade was executed	R
9	cycleDate	Date	Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.  An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.  The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)	C

Linkage Keys for **STE**:

**Trade Key:** date, exchange, symbol, tradeID

**Trade Key:** date, exchange, optionID, tradeID

**Fill Key:** date, exchange, symbol, fillID

**Fill Key:** date, exchange, optionID, fillID

### 3.7.4.Reject Message Event

*This event may be submitted in the Test Environment beginning on November 14, 2022 and in the Production Environment beginning on December 5, 2022.*

The Reject Message Event is reported when an exchange rejects a message, for example, when an exchange received a message that could not be accepted by the receiving system. This event is not intended for malformed messages. It is intended for well-formed messages that fail validation and are assigned a reject **reason by the receiver**. See JSON example below:

```
{
  "type": "RME",
  "exchange": "EXCH1",
  "symbol": "SYM",
  "eventTimestamp": "20221110T120000.000000",
  "sequenceNumber": 58,
  "seqNumSub": "random",
  "exchangeInternalID": "123456",
  "routingParty": "ABCD",
  "routedOrderID": "orderID",
  "session": "ssn1",
  "routedOriginalOrderID": "12345678",
  "rejectReason": 52,
  "rejectContext": [{"exampleContext": "random"}],
  "member": "Mem01",
  "cycleDate": "20221110"
}
```

A single event structure is defined for both equities and options, and it applies to both order-related and quote-related messages.

**Table 14: Reject Message Event**

Reject Message Event (RME)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	RME	R
2	exchange	Exchange ID	The ID for the exchange which received the rejected message.	R
3	symbol	Symbol	<p>Symbol for the stock being traded.</p> <p>Required for equity messages, including equity orders; stock legs of multi-leg orders; and stock legs for cross orders. Must match the symbol on the Industry Member's route event.</p> <p>Required for all stock-related events unless the submitted value was missing or unreadable.</p> <p>For simple option messages with a single underlying equity, the stock symbol should be provided unless the submitted value was missing or unreadable.</p>	C
4	optionID	Text (40)	<p>The ID of the option being traded.</p> <p>Required for all rejections related to a simple option unless the submitted value was missing or unreadable.</p> <p>Required for all rejections related to a complex option unless the submitted value was not yet defined for the strategy, missing or unreadable.</p>	C
5	eventTimestamp	Timestamp	The date/time of reject event.	R
6	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps.	C
7	seqNumSub	Text (10)	<p>A sequence number subsystem identifier assigned to the system that rejected the message.</p> <p>Required if the process or processes rejecting messages are different from the process assigning eventTimestamp values and sequenceNumber values to other events.</p>	C
8	exchangeInternalID	Text (40)	<p>The internal ID assigned to the order or quote by the exchange.</p> <p>Required if the message is related to an existing order (such as a quantity reduction), and the nature of the rejection allows the exchange to match the rejected message to the existing order.</p>	C
9	routingParty	Text (20)	The ID string used to identify the entity that routed the rejected message to the exchange. Must match	C

### Reject Message Event (RME)

#	Field Name	Data Type	Description	Include Key
			the senderIMID on the Industry Member's route event.  Required unless the submitted value was missing or unreadable.	
10	routedOrderID	Text (40)	The order ID that the firm used in the API message when they sent the rejected message to the exchange (e.g., in FIX it would be ClOrdId, in OUCH it would be Order Token).  Must match the routedOrderID value from the Industry Member's route event.  Required unless the submitted value was missing or unreadable.	C
11	session	Text (40)	The ID assigned to the specific session that the routing member used to route the rejected message to the exchange.  Must match the session value from the Industry Member's route event.  Required unless the submitted value was missing or unreadable.	C
12	routedOriginalOrderID	Text (40)	The ID for the order being modified, as sent by the routing broker in the original route message, or the most recent modify message (in FIX OrigClOrdID, in OUCH Existing Order Token).  Required if the message can be connected to an order that exists within the system.	C
13	rejectReason	Choice	Code representing the reason why the order was rejected. Codes are exchange-specific. See Data Dictionary for the list of allowed values.	R
14	rejectContext	Name/Value Pairs	A list of key/value pairs, providing machine parseable data for the notation. The attributes are not defined in the spec, and can be any values as long as they conform to the format for a list of name/value pairs.  Any additional information can be provided in this field. For example, the entire rejected message in Tag=Value format.	O
15	member	Member Alias	The identifier for the member firm that is responsible for the order.	C
16	cycleDate	Date	Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US	C

Reject Message Event (RME)				
#	Field Name	Data Type	Description	Include Key
			<p>Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	

The Processor will attempt forward linkage of the Industry Member routes for all Equities and Simple Options Orders containing routeRejectedFlag populated as “true” with their corresponding Plan Participant Reject Message Events (RME). If all Lifecycle Keys are present (as defined below), a link will be made. If all Lifecycle Keys are not present, no link will be made. Reject Messages Events that fail to link will not generate feedback; nor will they be included on report card statistics.

Lifecycle Keys for this event:

- Equities
  - **Route Link Key:** date, symbol, routingParty, routedOrderID, session, exchange
- Simple Options Orders:
  - **Route Link Key:** date, optionID, routingParty, routedOrderID, session, exchange

## 4. Events for Stock Exchanges

Within this Technical Specification, events for stock exchanges, options exchanges, and the trade reporting facilities are documented in separate sections. This section describes reportable events for stock exchanges.

**Table 15: Events for Stock Exchanges**

Sec	Event	Message Type	Description
4.1	Order Accepted	EOA	An Exchange receives and accepts a routed order
4.2	Order Route	EOR	An Exchange routes an order through a routing broker dealer
4.3	Internal Order Route	EIR	An exchange routes an order to another internal subsystem
4.4	Order Modified	EOM	The material terms of an order have been changed
4.5	Order Adjusted	EOJ	A select set of material terms of an order have been changed
4.6	Order Canceled	EOC	An Exchange cancels an order in part or in whole
4.7	Order Trade	EOT	All trades are reported to CAT as two-sided transactions with a single event
4.8	Order Fill	EOF	When a routed order executes, the Exchange reports the fill with the order and the routing firm
4.9	Order Cancel Route	ECR	An exchange initiates a cancel request on an order that it previously routed away.
4.10	Order Modify Route	EMR	An exchange initiates a modify or cancel/replace request on an order it previously routed away
4.11	Order Restatement	EORS	An order that persists across multiple business days is restated each day before any other activity is reported for that symbol
4.12	Trade Break	ETB	A trade is broken
4.13	Trade Correction	ETC	A trade is corrected

## 4.1. Order Accepted Event

When an exchange receives and accepts a routed order, an Order Accepted event is reported to CAT. If the order is rejected (i.e., not received and successfully processed by the matching engine), then an event is not reported to CAT.

Some systems will outright reject messages if they are malformed or contain a duplicate order ID. Other systems will silently ignore certain malformed messages (e.g., the OUCH protocol specifically states that new orders containing duplicate order tokens are silently ignored). However, all current systems will send some sort of positive acknowledgement when an order has been finally accepted into the system. Some systems will send an acknowledgement from the gateway upon receipt of the request, but the order could still possibly be rejected instead of accepted by the matching engine. Such protocols have a prescribed way of notifying the sender whether or not their order was actually accepted.

The basic rule is that orders rejected by the gateway are not reportable, but any order reaching the matching engine is reportable.

Note that for the order accepted event, the firm that sends the order to the exchange will be referred to as the routing firm. In the next event, order route event (section 4.2), the routing broker dealer will also be referred to as the routing firm.

The Order ID that is used in orders must be globally unique when combined with the date, exchange, symbol and general side, where the general side is either Buy or Sell.

**Table 16: Order Accepted**

Equity Order Accepted (EOA)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EOA	R
2	exchange	Exchange ID	The ID for the exchange which has accepted this order	R
3	eventTimestamp	Timestamp	The date/time of order receipt	R

### Equity Order Accepted (EOA)

#	Field Name	Data Type	Description	Include Key
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	routingParty	Text (8)	The ID string used to identify the entity that routed this order to the exchange	R
9	routedOrderID	Text (40)	The order ID that the firm used in the API message when they sent the order to the exchange (e.g., in FIX it would be ClOrdId, in OUCH it would be Order Token)	R
10	session	Text (40)	The ID assigned to the specific session that the routing member used to route the order to the exchange	R
11	side	Choice	The side of the order: See entry for "side" in the Data Dictionary for acceptable values	R
12	price	Price	The limit price of the order, if applicable. This must be provided when orderType indicates a limit order.	C
13	quantity	Unsigned	The order quantity	R
14	displayQty	Unsigned	The displayed quantity for this order	R
15	displayPrice	Price	The displayed price for this order. This must be provided when displayQty is greater than zero.	C
16	workingPrice	Price	The working price of the order at the time it was accepted. Note that Modified events must be reported to CAT anytime the working price changes.	C
17	orderType	Choice	The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types	R
18	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
19	capacity	Choice	See entry for "capacity" in the Data Dictionary for acceptable values	R

Equity Order Accepted (EOA)				
#	Field Name	Data Type	Description	Include Key
20	handlingInstructions	Name/Value Pairs	Defines the handling instructions, as described in Data Dictionary for Handling Instructions	C
21	orderAttributes	Name/Value Pairs	Defines reportable attributes of an order, that are not necessarily handling instructions	C
22	member	Member Alias	The identifier for the member firm that is responsible for the order	R
23	nbbPrice	Price	The NBBO at the moment the order was accepted. Prices are required. Quantities are optional	R
24	nbbQty	Unsigned		O
25	nboPrice	Price		R
26	nboQty	Unsigned		O

Linkage Keys for **EOA**:

**Order Key:** date, exchange, symbol, orderID

**Route Link Key:** date, symbol, routingParty, routedOrderID, session, exchange

**Cross Order Key:** date, exchange, orderID, pairedOrderID (if populated in order attributes name value pair)

## 4.2. Order Route Event

The following Order Route event is used to report when an exchange routes an order through a routing broker dealer.

When an order is routed, some exchanges create a derived order (with a different order ID), to represent the order being routed away. Others just route the order (or part of the order) straight to the routing broker without changing the Order ID. In either case, CAT must be able to link the internal order on the exchange with the internal order at the routing BD. Thus, both the report from the exchange and the report from the routing BD must have the same identifiers for the routed order. This is very similar to the process described earlier related to the Accepted event.

Note that for an order route event, the routing broker is referred to as the routing firm.

The Order Route event reported by the exchange needs three key pieces of information: the Routing Firm receiving the routed order, the Session ID through which the order is being routed, and the Routed Order ID, which is the order ID sent to the routing firm.

The Routing Firm must be represented by an entry in the exchange's member dictionary (though not necessarily a member of the exchange). Furthermore, as explained in the linkage section, both the exchange and the Routing Firm must know which Member Alias is to be reported to CAT because both will have to report the same Member Alias (the exchange in their Route event, and the firm in their Accepted event). Either both sides must use a constant value, or there must be some way to derive the value being used (via session configurations or in the message itself).

If the exchange creates a derived order, and passes that order ID to the firm via its API, then the Routed Order ID will be the order ID of the derived order. If, however, there is no derived order and the exchange passes its own internal order ID to the routing broker, then the internal order ID will also be assigned as the Routed Order ID. In this case, both the order ID and the routed order ID are populated with the same value.

**Table 17: Order Route**

Equity Order Route (EOR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EOR	R
2	exchange	Exchange ID	The ID for the exchange which is routing this order	R
3	eventTimestamp	Timestamp	The date/time at which the order was routed	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R

### Equity Order Route (EOR)

#	Field Name	Data Type	Description	Include Key
8	routingParty	Text (8)	The ID string used to identify the entity receiving this routed order. This value must match the value reported by the routing broker in their Order Accepted report	R
9	routedOrderID	Text (40)	The ID assigned to this order by the exchange when submitting the order to the routing firm. This value must match the value reported by the routing broker in their Order Accepted report	R
10	session	Text (40)	The ID assigned to the specific session used when sending the order from the exchange to the routing firm.	R
11	side	Choice	The side of the order: See entry for "side" in the Data Dictionary for acceptable values	R
12	price	Price	The limit price of the order, if applicable. This must be provided when orderType indicates a limit order.	C
13	quantity	Unsigned	The order quantity	R
14	displayQty	Unsigned	The displayed quantity for this order	R
15	orderType	Choice	The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types	R
16	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
17	capacity	Choice	See entry for "capacity" in the Data Dictionary for acceptable values	R
18	handlingInstructions	Name/Value Pairs	Defines the handling instructions, as described in Data Dictionary for Handling Instructions	C
19	result	Choice	The result of the route request (e.g. acknowledged, rejected, or no response). See the Data Dictionary for the list of allowed values	O
20	resultTimestamp	Timestamp	The date/time the result of the request was received, required if the result is ACK (acknowledged) or REJ (rejected)	O
21	member	Member Alias	The identifier for the member firm that is responsible for the order	R
22	nbbPrice	Price	The NBBO at the moment the order was routed. Prices are required. Quantities are optional	R
23	nbbQty	Unsigned		O

Equity Order Route (EOR)				
#	Field Name	Data Type	Description	Include Key
24	nboPrice	Price		R
25	nboQty	Unsigned		O

Linkage Keys for **EOR**:

**Order Key:** date, exchange, symbol, orderID

**Route Link Key:** date, symbol, exchange, routedOrderID, routingParty

### 4.3. Internal Order Route Event

In some cases, an exchange may have multiple internal subsystems involved in handling orders. In such cases, an order may be accepted by one internal system, and then routed to one or more internal systems for processing. Routes within an exchange are not required to be reported to CAT. However, there are cases where it is difficult for an exchange to report the entire status of an order to CAT when its internal processing is handled on multiple systems. Specifically, ensuring that the events contain the same order identifiers would require substantial post processing.

Thus, an internal route event may be reported to CAT, indicating that an order is being passed from one internal system to another. This will allow CAT to link events that are related to the same order within an exchange, even if the exchange has changed the identifiers on the order as it moves between internal systems.

**Table 18: Internal Order Route**

Equity Internal Order Route (EIR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EIR	R
2	exchange	Exchange ID	The ID for the exchange which is routing this order.	R
3	eventTimestamp	Timestamp	The date/time at which the order was routed.	R

### Equity Internal Order Route (EIR)

#	Field Name	Data Type	Description	Include Key
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps.	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	routingParty	Text (8)	The ID string used to identify the internal subsystem that is receiving this routed order. This value must match the value reported by the receiving subsystem in the <code>routingParty</code> field of their Order Accepted report	R
9	routedOrderID	Text (40)	The ID assigned to this order by the exchange when submitting the order to the subsystem. This value must match the value reported by the receiving subsystem in the <code>routedOrderID</code> field of their Order Accepted report	R
10	session	Text (40)	The ID assigned to the specific session used when sending the order from the sending subsystem to the receiving subsystem. This value must match the value reported by the receiving subsystem in the <code>session</code> field of their Order Accepted report	R
11	side	Choice	The side of the order: See entry for "side" in the Data Dictionary for acceptable values	R
12	price	Price	The limit price of the order, if applicable. This must be provided when <code>orderType</code> indicates a limit order.	C
13	quantity	Unsigned	The order quantity	R
14	displayQty	Unsigned	The displayed quantity for this order	R
15	orderType	Choice	The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types	R
16	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
17	capacity	Choice	See entry for "capacity" in the Data Dictionary for acceptable values	R
18	handlingInstructions	Name/Value Pairs	Defines the handling instructions, as described in Data Dictionary for Handling Instructions	C

Equity Internal Order Route (EIR)				
#	Field Name	Data Type	Description	Include Key
19	result	Choice	The result of the route request (e.g. acknowledged, rejected, or no response). See the Data Dictionary for the list of allowed values	O
20	resultTimestamp	Timestamp	The date/time the result of the request was received, required if the result is ACK (acknowledged) or REJ (rejected)	O
21	member	Member Alias	The identifier for the member firm that is responsible for the order	R

Linkage Keys for **EIR**:

**Order Key:** date, exchange, symbol, orderID

**Route Link Key:** date, symbol, exchange, routedOrderID, session, routingParty

#### 4.4. Order Modified Event

An event must be sent to CAT to report any customer modification to the order. Additionally, an event must be sent to CAT to report any changes to the order due to an exchange action, including updates related to changes in market conditions.

Events that should be reported include, but are not limited to:

- Any customer update that passes validation and is successfully processed by the trading system
- Changes to the available quantity of the order, such as liquidity returning from an away market unexecuted
- Changes to the working price, display price, or display quantity
- Changes to the executability of an order, such as when a regular-hours order arrived prior to the opening time and it is now the opening time or when an order expires and no explicit cancellation is provided

This event supports all possible modifications to an equity order. The full state of the order should be reported, including fields that did not change as a result of the modification.

**Table 19: Order Modified**

Equity Order Modified (EOM)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EOM	R
2	exchange	Exchange ID	The identifier for the exchange which has modified this order	R
3	eventTimestamp	Timestamp	The date/time at which the modification was received or originated	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	originalOrderID	Text (40)	The internal order ID before the modify / replacement created a new order ID. If the order kept its ID through the modification, then this value need not be included	C
9	initiator	Choice	Indicates who initiated the order modification: See entry for "initiator" in the Data Dictionary for acceptable values	R
10	nbbPrice	Price	The NBBO at the moment the order was modified. Prices are required. Quantities are optional	R
11	nbbQty	Unsigned		O
12	nboPrice	Price		R
13	nboQty	Unsigned		O
14	price	Price	<p>The limit price of the order, if applicable. This must be provided when orderType indicates a limit order.</p> <p>Note that this is only for reporting limit price modifications. Automated changes to prices (e.g., PEG orders) would be tracked by reporting a difference in the working price. See the PEG example in section 7.5 for exact details</p>	C

### Equity Order Modified (EOM)

#	Field Name	Data Type	Description	Include Key
15	quantity	Unsigned	When the initiator field is set to Firm or Market Maker, the order quantity.  When the initiator field is set to Exchange, the total quantity available on the local book at the conclusion of the modification.	R
16	displayQty	Unsigned	The displayed quantity for this order	R
17	displayPrice	Price	The displayed price for this order. This must be provided when displayQty is greater than zero.	C
18	workingPrice	Price	The working price of the order	C
19	leavesQty	Unsigned	The quantity left open after the modification has occurred.	R
20	orderType	Choice	The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types.	R
21	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
22	capacity	Choice	See entry for Capacity in the Data Dictionary for acceptable values	R
23	handlingInstructions	Name/Value Pairs	Defines the handling instructions, as described in Data Dictionary for Handling Instructions.	C
24	orderAttributes	Name/Value Pairs	Defines reportable attributes of an order, that are not necessarily handling instructions.	C
25	member	Member Alias	The identifier for the member firm that is responsible for the order	R
26	routedOrderID	Text (40)	For customer-driven changes to the order, the ID assigned to this order by the routing firm when submitting the modification to the exchange.  For the return of unexecuted liquidity previously routed away, optionally provide the exchange-assigned ID used to route the order away.  Except as noted above, not required for exchange-driven modifications.  This must be provided when initiator is 'Firm' or 'MarketMaker'.	C

Equity Order Modified (EOM)				
#	Field Name	Data Type	Description	Include Key
27	routingParty	Text(8)	<p>For customer-driven changes to the order, the ID string used to identify the entity that routed this order modification to the exchange.</p> <p>For the return of unexecuted liquidity previously routed away, optionally provide the exchange-assigned ID string used to route the order away. Should match the value of the EOR event routingParty with the same routedOrderID.</p> <p>Except as noted above, not required for exchange-driven modifications.</p> <p>This must be provided when initiator is 'Firm' or 'MarketMaker'.</p>	C
28	session	Text(40)	<p>For customer-driven changes to the order, the ID assigned to the specific session that the routing member used to route the order to the exchange.</p> <p>For the return of unexecuted liquidity previously routed away, optionally provide the exchange-assigned ID used to route the order away. Should match the value of the EOR event session with the same routedOrderID.</p> <p>Except as noted above, not required for exchange-driven modifications.</p> <p>This must be provided when initiator is 'Firm' or 'MarketMaker'.</p>	C
29	side	Choice	<p>The side of the order: See entry for "side" in the Data Dictionary for acceptable values. Should be provided for firm or market maker updates to an order. Should be reported even if it has not changed from the prior version of the order.</p> <p>This must be provided when initiator is 'Firm' or 'MarketMaker'.</p>	C

Linkage Keys for **EOM**:

**Order Key:** date, exchange, symbol, orderID

**Previous Order Key:** date, exchange, symbol, originalOrderID

**Route Link Key:** date, symbol, exchange, routedOrderID, routingParty, session

**Cross Order Key:** date, exchange, orderID, pairedOrderID (if pairedOrderID is populated in order attributes name value pair)

## 4.5. Order Adjusted Event

An event must be sent to CAT to report any customer modification to the order. Additionally, an event must be sent to CAT to report any changes to the order due to an exchange action, including updates related to changes in market conditions.

Unlike the EOM, which supports changes to any reportable attribute, the EOJ event supports only changes to the side, price, quantity, working price, display price, and display quantity. Side adjustments are only allowed for same-side changes (e.g., changes between short and long sell).

All other order instructions are assumed to be unchanged.

**Table 20: Order Adjusted**

Equity Order Adjusted (EOJ)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EOJ	R
2	exchange	Exchange ID	The identifier for the exchange which has modified this order	R
3	eventTimestamp	Timestamp	The date/time at which the modification was received or originated	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	originalOrderID	Text (40)	The internal order ID before the modify / replacement created a new order ID. If the order kept its ID through the modification, then this value need not be included	C
9	initiator	Choice	Indicates who initiated the order modification: See entry for "initiator" in the Data Dictionary for acceptable values	R

### Equity Order Adjusted (EOJ)

#	Field Name	Data Type	Description	Include Key
10	side	Choice	The side of the order: See entry for "side" in the Data Dictionary for acceptable values. Should be provided for firm or market maker updates to an order. Should be provided for all firm updates to the order even if it hasn't changed from the previous version of the order.  This must be provided when initiator is 'Firm' or 'MarketMaker'.	C
11	price	Price	The limit price of the order, if it changed. This must be provided when orderType indicates a limit order.	C
12	displayPrice	Price	The displayed price for this order. This must be provided when displayQty is greater than zero.	C
13	workingPrice	Price	The working price of the order	C
14	quantity	Unsigned	When the initiator field is set to Firm or Market Maker, the order quantity.  When the initiator field is set to Exchange, the total quantity available on the local book at the conclusion of the modification.  This must be provided when initiator is 'Firm' or 'MarketMaker'.	C
15	displayQty	Unsigned	The displayed quantity for this order. This must be provided when displayPrice is provided.	C
16	leavesQty	Unsigned	The quantity left open after the modification has occurred.	C
17	member	Member Alias	The identifier for the member firm that is responsible for the order	R
18	nbbPrice	Price	The NBBO at the moment the order was modified. Prices are required. Quantities are optional.	R
19	nbbQty	Unsigned		O
20	nboPrice	Price		R
21	nboQty	Unsigned		O

Equity Order Adjusted (EOJ)				
#	Field Name	Data Type	Description	Include Key
22	routedOrderID	Text (40)	<p>For customer-driven changes to the order, the ID assigned to this order by the routing firm when submitting the modification to the exchange</p> <p>For the return of unexecuted liquidity previously routed away, optionally provide the exchange-assigned ID used to route the order away</p> <p>Except as noted above, not required for exchange-driven modifications</p> <p>This must be provided when initiator is 'Firm' or 'MarketMaker'.</p>	C
23	routingParty	Text(8)	<p>For customer-driven changes to the order, the ID string used to identify the entity that routed this order modification to the exchange.</p> <p>For the return of unexecuted liquidity previously routed away, optionally provide the exchange-assigned ID string used to route the order away. Should match the value of the EOR event routingParty with the same routedOrderID.</p> <p>Except as noted above, not required for exchange-driven modifications.</p> <p>This must be provided when initiator is 'Firm' or 'MarketMaker'.</p>	C
24	session	Text(40)	<p>For customer-driven changes to the order, the ID assigned to the specific session that the routing member used to route the order to the exchange.</p> <p>For the return of unexecuted liquidity previously routed away, optionally provide the exchange-assigned ID used to route the order away. Should match the value of the EOR event session with the same routedOrderID.</p> <p>Except as noted above, not required for exchange-driven modifications.</p> <p>This must be provided when initiator is 'Firm' or 'MarketMaker'.</p>	C

Linkage Keys for **EOJ**:

**Order Key:** date, exchange, symbol, orderID

**Previous Order Key:** date, exchange, symbol, originalOrderID

**Route Link Key:** date, symbol, exchange, routedOrderID, routingParty, session

**Cross Order Key:** date, exchange, orderID, pairedOrderID (if pairedOrderID is populated in order attributes name value pair)

## 4.6. Order Canceled Event

When an exchange cancels an order, in part or in whole, the event must be reported to CAT. Note that an explicit Canceled Event is required for every order that is canceled, even orders that have implicit "execute or cancel" instructions like IOC orders.

A Canceled event should be used anytime any part of an order is canceled. For example, an order can be partially reduced either with a cancel message or a modify (cancel/replace) message. If an actual cancel is processed by the exchange, a Canceled event would be reported. If a modify and/or cancel/replace was sent to the exchange, a Modified event would be reported. This keeps the reported event in line with the original intent.

Some protocols only allow full cancels; partial cancels must be accomplished via a cancel/replace. In such cases, partial cancels would always be reported as Modified events.

**Table 21: Order Canceled**

Equity Order Canceled (EOC)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EOC	R
2	exchange	Exchange ID	The ID for the exchange which has canceled this order.	R
3	eventTimestamp	Timestamp	The date/time at which the cancellation was received or originated.	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier.	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	cancelQty	Unsigned	The quantity being canceled.	R

Equity Order Canceled (EOC)				
#	Field Name	Data Type	Description	Include Key
9	leavesQty	Unsigned	The quantity left open after the cancel event (zero for a full cancel)	R
10	initiator	Choice	Indicates who initiated the order cancellation: See entry for "initiator" in the Data Dictionary for acceptable values	R
11	cancelReason	Choice	Code representing the reason why the order was canceled. The actual value of the code is exchange specific. See Data Dictionary for the list of allowed values	O
12	member	Member Alias	The identifier for the member firm that is responsible for the order	R

Linkage Keys for **EOC**:

**Order Key:** date, exchange, symbol, orderID

#### 4.7. Order Trade Event

All trade events are reported to CAT as two-sided transactions, with a single event.

Each order trade event is represented with the following details. The details in the table Table 23: Order Trade Side Details must be populated for each side of the trade.

**Table 22: Order Trade Events**

Equity Order Trade (EOT)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EOT	R
2	exchange	Exchange ID	The ID for the exchange on which the trade took place	R
3	eventTimestamp	Timestamp	The date/time of execution	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C

Equity Order Trade (EOT)				
#	Field Name	Data Type	Description	Include Key
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	tradeID	Text (40)	This ID will be used when a specific trade needs to be identified, for example in trade break and correction reports. The combination of date, exchange, symbol, and tradeID must be globally unique	R
8	quantity	Unsigned	Quantity of the trade	R
9	price	Price	Price of the trade	R
10	saleCondition	Text (8)	Conditions under which trade was executed	C
11	executionCodes	Name/Value Pairs	Describes any execution codes, acceptable values are described in Data Dictionary. These codes apply to both sides of the trade	C
12	buyDetails	Order Trade Side Details	See Table 23: Order Trade Side Details	R
13	sellDetails	Order Trade Side Details	See Table 23: Order Trade Side Details	R
14	nbbPrice	Price	The national best bid price at the moment the trade occurred	R
15	nbbQty	Unsigned	The national best bid quantity at the moment the trade occurred	O
16	nboPrice	Price	The national best offer price at the moment the trade occurred	R
17	nboQty	Unsigned	The national best offer quantity at the moment the trade occurred	O

**Table 23: Order Trade Side Details**

Equity Order Trade: Side Details				
#	Field Name	Data Type	Description	Include Key
12.n.1 / 13.n.1	side	Choice	The side of the order: See entry for "side" in the Data Dictionary for acceptable values. Not required if there is not order for the side as indicated by the NOBUYID/NOSELLID instruction.  This must be provided if orderID is provided.	C

Equity Order Trade: Side Details				
#	Field Name	Data Type	Description	Include Key
12.n.2 / 13.n.2	leavesQty	Unsigned	The quantity remaining unfilled after this trade event. Not required if there is no order for the side as indicated by the NOBUYID/NOSELLID instruction.  Not required when used in a trade correction	C
12.n.3 / 13.n.3	orderId	Text (40)	The internal order ID for this side of the trade.  This must be provided when, and only when, there is not a NOBUYID/NOSELLID instruction. This must be blank if the NOBUYID/NOSELLID instruction exists.	C
12.n.4 / 13.n.4	capacity	Choice	See entry for Capacity in the Data Dictionary for acceptable values.  Not required if there is no order for the side as indicated by the NOBUYID/NOSELLID instruction.  This must be provided if orderId is provided.	C
12.n.5 / 13.n.5	clearingNumber	Text (20)	DTCC clearing number for this side of the trade.  Not required if there is no order for the side as indicated by the NOBUYID/NOSELLID instruction.  This must be provided if orderId is provided.	C
12.n.6 / 13.n.6	executionCodes	Name/Value Pairs	Describes any execution codes, as described in Data Dictionary for Execution Codes. These codes would only apply only to this side of the trade	C
12.n.7 / 13.n.7	liquidityCode	Choice	Specifies if this side of the trade was adding or removing liquidity. See entry for liquidityCode in the Data Dictionary for permitted values.  Not required if there is no order for the side as indicated by the NOBUYID/NOSELLID instruction.	C
12.n.8 / 13.n.8	member	Member Alias	The identifier for the member firm that is responsible for the order on this side of the trade.  Not required if there is no order for the side as indicated by the NOBUYID/NOSELLID instruction.  This must be provided if orderId is provided.	C
12.n.9 / 13.n.9	routedOrderID	Text (40)	For events representing an away trade, the exchange-assigned ID used to route the order away.	O

Linkage Keys for **EOT**:

**Order Key:** date, exchange, symbol, buyDetails.orderID

**Order Key:** date, exchange, symbol, sellDetails.orderID

**Trade Key:** date, exchange, symbol, tradeID

**Route Link Key:** date, symbol, exchange, buyDetails.routedOrderID

**Route Link Key:** date, symbol, exchange, sellDetails.routedOrderID

#### 4.8. Order Fill Event

When a routed order executes, the routing firm acquires the position. The exchange will report the fill with the order on one side, and the routing firm on the other side.

**Table 24: Order Fill Event**

Equity Order Fill (EOF)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EOF	R
2	exchange	Exchange ID	The ID of the exchange reporting the fill to CAT	R
3	eventTimestamp	Timestamp	The date/time when the fill was processed by the exchange	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	fillID	Text (40)	A unique identifier for the transaction. The combination of reporter, date, symbol, side, and fillID should be unique	R
7	symbol	Symbol	The symbol of the stock being filled	R
8	quantity	Unsigned	Quantity of the fill	R
9	price	Price	Price of the fill	R
10	leavesQty	Unsigned	The quantity remaining unfilled after this fill event	R
11	saleCondition	Text (8)	Conditions under which trade was executed	C
12	orderID	Text (40)	The internal ID of the order	R
13	side	Choice	Side of the executed trade: for example Buy, Sell or Short. See the entry 'side' in data dictionary for the list of accepted values	R
14	clearingNumber	Text (20)	DTCC clearing number for this side of the trade	R

Equity Order Fill (EOF)				
#	Field Name	Data Type	Description	Include Key
15	contraClearingNumber	Text (20)	DTCC clearing number for contra side of the trade	O
16	executionCodes	Name / Value Pairs	Optional. Can include zero or more execution codes, as described in Data Dictionary for Execution Codes. These codes would only apply only to this side of the trade	C
17	routingParty	Text (8)	The ID string used to identify the entity that received this routed order. This value will be the same as in the Order Route event for the order being filled	R
18	routedOrderID	Text (40)	The same Order ID that was used when the order was routed away - and will be on the execution report from the routing BD	R
19	session	Text (40)	The Session ID of the session on which the order was routed to the BD, and will be the same session on which the execution came back from the BD	R
20	capacity	Choice	See entry for Capacity in the Data Dictionary for acceptable values	R
21	member	Member Alias	The identifier for the member firm that is responsible for the order being filled	R

Linkage Keys for **EOF**:

**Order Key:** date, exchange, symbol, orderID

**Fill Key:** date, exchange, symbol, fillID

**Route Link Key:** date, symbol, exchange, routedOrderID, session, routingParty

#### 4.9. Order Cancel Route Event

When an exchange initiates a cancel request on an order it has previously routed away, it must report its intent to cancel, using a Cancel Route Event.

**Table 25: Order Cancel Route**

Equity Order Cancel Route (ECR)				
#	Field Name	Data Type	Description	Include Key

Equity Order Cancel Route (ECR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	ECR	R
2	exchange	Exchange ID	The ID for the exchange canceling the routed order	R
3	eventTimestamp	Timestamp	The date/time when the cancel request was sent to the routing firm	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	routingParty	Text (8)	The ID string used to identify the entity that received this routed order. This value will be the same as in the Order Route event for the order being canceled	R
9	routedOrderID	Text (40)	The routed ID for the order being canceled - must also match the routedOrderID in the original Order Route message for this order	R
10	session	Text (40)	The session ID on which the cancel request is being made - must also match the session in the original Order Route message for this order	R
11	desiredLeavesQty	Unsigned	The desired number of shares remaining in the order after the cancel request has been issued. A value of zero indicates a full cancel	R
12	result	Choice	The result of the cancel request (e.g. acknowledged, rejected, or no response). See the Data Dictionary for the list of allowed values	O
13	resultTimestamp	Timestamp	The date/time the result of cancel request was received, required if the result is ACK (acknowledged) or REJ (rejected)	O
14	member	Member Alias	The identifier for the member firm that is responsible for the order	R

Linkage Keys for **ECR**:

**Order Key:** date, exchange, symbol, orderID

**Route Link Key:** date, symbol, exchange, routedOrderID, routingParty

## 4.10. Order Modify Route Event

When an exchange initiates a modify or cancel/replace request on an order it has previously routed away, it must report its intent to modify the order, using a Modify Route Event.

If the request does not change the routed order ID, then both routedOrderID and routedOriginalOrderID must be the same.

**Table 26: Order Modify Route**

Equity Order Modify Route (EMR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EMR	R
2	exchange	Exchange ID	The ID for the exchange modifying the routed order	R
3	eventTimestamp	Timestamp	The date/time when the exchange made the modify request	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	routingParty	Text (8)	The ID string used to identify the entity that received this routed order. This value will be the same as in the Order Route event for the order being modified	R
9	routedOrderID	Text (40)	The new routed ID for the order, which will be used to refer to the routed order after the modification (in FIX, ClOrdID - in OUCH, Replacement Order Token)	R
10	routedOriginalOrderID	Text (40)	The ID for the order being modified, as sent to the routing broker in the original route message, or the most recent modify message (in FIX OrigClOrdID, in OUCH Existing Order Token)	R
11	session	Text (40)	The ID assigned to the session used to send the modify request from the routing broker to the exchange - must also match the session in the original Order Route message for this order	R

Equity Order Modify Route (EMR)				
#	Field Name	Data Type	Description	Include Key
12	price	Price	The limit price of the order, if applicable. This must be provided when orderType indicates a limit order.	C
13	quantity	Unsigned	The order quantity	R
14	displayQty	Unsigned	The displayed quantity for this order	R
15	orderType	Choice	The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types.	R
16	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values.	R
17	capacity	Choice	See entry for Capacity in the Data Dictionary for the full list of acceptable values	R
18	handlingInstructions	Name/Value Pairs	Can include zero or more handling instructions, as described in Data Dictionary for Handling Instructions	C
19	result	Choice	The result of the modify request (e.g. acknowledged, rejected, or no response). See the Data Dictionary for the list of allowed values	O
20	resultTimestamp	Timestamp	The date/time the result of modify request was received, required if the result is ACK (acknowledged) or REJ (rejected)	O
21	member	Member Alias	The identifier for the member firm that is responsible for the order	R
22	nbbPrice	Price	The national best bid price at the moment the trade occurred	R
23	nbbQty	Unsigned	The national best bid quantity at the moment the trade occurred	O
24	nboPrice	Price	The national best offer price at the moment the trade occurred	R
25	nboQty	Unsigned	The national best offer quantity at the moment the trade occurred	O

Linkage Keys for **EMR**:

**Order Key:** date, exchange, symbol, orderID

**Route Link Key:** date, symbol, exchange, routedOrderID, routingParty

**Previous Route Link Key:** date, symbol, exchange, routedOriginalOrderID, routingParty

#### 4.11. Order Restatement Event

Orders that persist across business days (e.g., GTC orders) must be restated each day before any other activity is reported for that symbol. The restatement is an explicit confirmation that the order is still active in the reporter's order book, and also provides an opportunity to use per-day unique order IDs for all orders.

The attributes of the order will be restated in terms of the order's current state, after any corporate actions have been processed (e.g., if a 2:1 split occurred, the quantity and price would reflect the resulting change).

**Table 27: Order Restatement**

Equity Order Restatement (EORS)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EORS	R
2	exchange	Exchange ID	The ID for the exchange which is restating this order	R
3	eventTimestamp	Timestamp	The date/time when the order was restated by the exchange	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	originalOrderDate	Date	The most recent trading day for which the order was active. Note that this may not be the date when the order was originally accepted. If the order has been active for multiple trading days, this field must reference the previous trading day when the order was active	R
9	originalOrderID	Text (40)	The most recent internal order ID that was assigned to the order before this restatement event. If the order ID has not changed, then orderID and originalOrderID must be equivalent. Note this requirement is different from modification events	R

Equity Order Restatement (EORS)				
#	Field Name	Data Type	Description	Include Key
10	side	Choice	The side of the order (e.g., Buy, Sell, Short, etc.). See entry for "side" in the Data Dictionary for acceptable values	R
11	price	Price	The limit price of the order, if applicable. This must be provided when orderType indicates a limit order.	C
12	quantity	Unsigned	The order quantity, as adjusted for a corporate action, if applicable	R
13	displayQty	Unsigned	The displayed quantity for this order	R
14	displayPrice	Price	The displayed price for this order. This must be provided when displayQty is greater than zero.	C
15	workingPrice	Price	The working price of the order	C
16	leavesQty	Unsigned	The quantity of the order that remains open	R
17	orderType	Choice	The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types	R
18	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values.	R
19	capacity	Choice	See entry for Capacity in the Data Dictionary for acceptable values	R
20	handlingInstructions	Name/Value Pairs	Defines the handling instructions, as described in Data Dictionary for Handling Instructions	C
21	orderAttributes	Name/Value Pairs	Defines reportable attributes of an order that are not necessarily handling instructions	C
22	member	Member Alias	The identifier for the member firm that is responsible for the order	R

Linkage Keys for **EORS**:

**Order Key:** date, exchange, symbol, orderID

**Previous Order Key:** originalOrderDate, exchange, symbol, originalOrderID

#### 4.12. Trade Break Event

When a trade is broken, an event is reported to CAT with the appropriate information. Note that CAT adds the event to the history of the order. The broken trade is not removed from the history, as it is something that actually happened and should be recorded.

**Table 28: Order Trade Break**

Equity Order Trade Break (ETB)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	ETB	R
2	exchange	Exchange ID	The ID for the exchange on which the trade took place	R
3	eventTimestamp	Timestamp	The date/time of the break event	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, as reported on the original trade that is being broken	R
7	tradeDate	Date	The date on which the trade being broken occurred	R
8	tradeID	Text (40)	The ID for the trade that is being broken. This must match a previously reported trade	R
9	quantity	Unsigned	If the full quantity is being broken, then this field can be omitted. Otherwise, this represents the quantity of the original trade that is being broken	O
10	reason	Text (255)	Free format text field, with the reason for the break	O

Linkage Keys for **ETB**:

**Trade Key:** tradeDate, exchange, symbol, tradeID

#### 4.13. Trade Correction Event

If a trade is corrected in any way, a correction event must be reported to CAT with all details of the trade, after having been corrected.

As with trade breaks, CAT will still keep the original trade, adding the correction to the audit trail of the trade being corrected.

**Table 29: Order Trade Correction**

Equity Order Trade Correction (ETC)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	ETC	R
2	exchange	Exchange ID	The ID for the exchange on which the trade took place.	R
3	eventTimestamp	Timestamp	The date/time of correction	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	tradeID	Text (40)	This ID for the trade being corrected	R
8	refTradeID	Text (40)	The trade being referenced. Used to link corrections if trade corrections can assign new identifiers to trades. If included, refTradeID must reference a previously reported trade, or a previously reported trade correction that has a matching tradeID	C
9	quantity	Unsigned	Quantity of the trade.	R
10	price	Price	Price of the trade	R
11	saleCondition	Text (8)	Conditions under which trade was executed	C
12	executionCodes	Name/Value Pairs	Describes any execution codes, acceptable values are described in Data Dictionary. These codes apply to both sides of the trade	C
13	executionTimestamp	Timestamp	The date/time of the execution, applicable only when the execution time was corrected	O
14	buyDetails	Order Trade Side Details	See Table 23: Order Trade Side Details	O
15	sellDetails	Order Trade Side Details	See Table 23: Order Trade Side Details	O
16	reason	Text (255)	Free format text field, with the reason for the correction	O

Linkage Keys for **ETC**:

**Order Key:** date, exchange, symbol, buyDetails.orderID

**Order Key:** date, exchange, symbol, sellDetails.orderID

**Route Link Key:** date, symbol, exchange, buyDetails.routedOrderID

**Route Link Key:** date, symbol, exchange, sellDetails.routedOrderID

**Trade Key:** date, exchange, symbol, tradeID

**Previous Trade Key:** date, exchange, symbol, refTradeID

#### 4.14. Lifecycle Keys

The lifecycle keys for each event are summarized in the following table.

**Table 30: Equity Event Lifecycle Keys**

Section	Event	Lifecycle Keys
4.1	Order Accepted	<b>Order Key:</b> date, exchange, symbol, orderID <b>Route Link Key:</b> date, symbol, routingParty, routedOrderID, session, exchange <b>Cross Order Key:</b> date, exchange, orderID, pairedOrderID (if pairedOrderID is populated in order attributes name value pair)
4.2	Order Route	<b>Order Key:</b> date, exchange, symbol, orderID <b>Route Link Key:</b> date, symbol, exchange, routedOrderID, routingParty
4.3	Internal Order Route	<b>Order Key:</b> date, exchange, symbol, orderID <b>Route Link Key:</b> date, symbol, exchange, routedOrderID, session, routingParty
4.4	Order Modified	<b>Order Key:</b> date, exchange, symbol, orderID <b>Previous Order Key:</b> date, exchange, symbol, originalOrderID <b>Route Link Key:</b> date, symbol, exchange, routedOrderID, session, routingParty <b>Cross Order Key:</b> date, exchange, orderID, pairedOrderID (if pairedOrderID is populated in order attributes name value pair)

Section	Event	Lifecycle Keys
4.5	Order Adjusted	<b>Order Key:</b> date, exchange, symbol, orderID <b>Previous Order Key:</b> date, exchange, symbol, originalOrderID <b>Route Link Key:</b> date, symbol, exchange, routedOrderID, session, routingParty <b>Cross Order Key:</b> date, exchange, orderID, pairedOrderID (if pairedOrderID is populated in order attributes name value pair)
4.6	Order Canceled	<b>Order Key:</b> date, exchange, symbol, orderID
4.7	Order Trade	<b>Order Key:</b> date, exchange, symbol, buyDetails.orderID <b>Order Key:</b> date, exchange, symbol, sellDetails.orderID <b>Trade Key:</b> date, exchange, symbol, tradeID <b>Route Link Key:</b> date, symbol, exchange, buyDetails.orderID <b>Route Link Key:</b> date, symbol, exchange, sellDetails.orderID
4.8	Order Fill	<b>Order Key:</b> date, exchange, symbol, orderID <b>Route Link Key:</b> date, symbol, exchange, routedOrderID, session, routingParty <b>Fill Key:</b> date, exchange, symbol, fillID
4.9	Order Cancel Route	<b>Order Key:</b> date, exchange, symbol, orderID <b>Route Link Key:</b> date, symbol, exchange, routedOrderID, routingParty
4.10	Order Modify Route	<b>Order Key:</b> date, exchange, symbol, orderID <b>Route Link Key:</b> date, symbol, exchange, routedOrderID, routingParty <b>Previous Route Link Key:</b> date, symbol, exchange, routedOriginalOrderID,, routingParty
4.11	Order Restatement	<b>Order Key:</b> date, exchange, symbol, orderID <b>Previous Order Key:</b> originalOrderDate, exchange, symbol, originalOrderID
4.12	Trade Break	<b>Trade Key:</b> tradeDate, exchange, symbol, tradeID
4.13	Trade Correction	<b>Order Key:</b> date, exchange, symbol, buyDetails.orderID <b>Order Key:</b> date, exchange, symbol, sellDetails.orderID <b>Route Link Key:</b> date, symbol, exchange, buyDetails.routedOrderID <b>Route Link Key:</b> date, symbol, exchange, sellDetails.routedOrderID <b>Trade Key:</b> date, exchange, symbol, tradeID

## 5. Events for Options Exchanges

These events are specific for options exchanges.

**Table 31: Events for Options Exchanges**

Section	Event	Message Type	Description
5.1.1	Quote	OQ	A new quote or a quote replacement for a single option
5.1.2	Complex Quote	OCQ	A new quote or a quote replacement for a complex option
5.1.3	Quote Cancel	OQC	Report when a quote is canceled
5.2.1.1	Simple Option Order Accepted	OOA	Represents either a stand-alone option series order, or one leg of a complex parent order accepted by an exchange
5.2.1.2	Complex Option Order Accepted	OCOA	Represents a complex option order accepted by an exchange
5.2.1.3	Stock Leg Order	OSL	Stock legs are reported individually, with a link to the parent complex order
5.2.2.1	Option Order Modified	OOM	Modification of a simple option order or an option leg order
5.2.2.2	Complex Option Order Modified	OCOM	Modification of a complex option order
5.2.2.3	Stock Leg Modified	OSLM	Modification of a stock leg of a complex option order
5.2.2.4	Option Order Adjusted	OOJ	Adjustment of a simple option order or an option leg order
5.2.2.5	Complex Option Order Adjusted	OCOJ	Adjustment of a complex option order
5.2.2.6	Stock Leg Adjusted	OSLJ	Adjustment of a stock leg of a complex option order
5.2.3	Option Order Canceled	OOC	Cancellation of a simple option order or a complex option order
5.2.4.2	Option Route	OOR	Routing all or part of a simple option order, routing two stock legs to be crossed, or routing a stock leg for execution
5.2.4.3	Complex Option Route	OCOR	Routing of a complex order to an external destination.
5.2.4.4	Internal Option Route	OIR	Internal route of an option or a leg of a complex option
5.2.4.5	Internal Complex Option Route	OCIR	Internal route of a complex option
5.2.4.6	Modify Option Route	OOMR	Modification or cancel/replace request on an option or stock leg order previously routed away,

Section	Event	Message Type	Description
5.2.4.7	Option Cancel Route	OOCR	Cancel request on an order that has been previously routed away
5.2.5.1	Simple Option Trade	OT	Two-sided trade report for simple options and option legs
5.2.5.2	Stock Leg Fill	OSLF	One-sided fill of a routed stock leg order
5.2.6	Post Trade Allocation	OPTA	In the event of a modified, canceled, or replaced post trade Allocation, the final allocation is reported to CAT.
5.3	Option Order Restatement	OORS	Restatement for options orders that persist across business days (e.g., GTC orders)
5.4	Option Trade Break	OTB	When a trade is broken
5.5	Option Trade Correction	OTC	When a trade is corrected in any way
5.6.1	Option Floor Participant	OFP	A floor participant routes a simple option order to a matching engine.
5.6.2	Complex Option Floor Participant	OCFP	A floor participant routes a complex option order to a matching engine.
5.6.3	Option Return to Floor Participant	ORFP	The matching engine returns an order to a Floor Participant.

## 5.1. Market Maker Quotes

Quotes issued by market makers (MMs) to options exchanges must be reported to CAT. This section will describe the types of attributes that are used to model quote events, and the types of quote events that should be reported to CAT. CAT supports both one-sided and two-sided quotes.

While some exchanges create quotes and orders the same way, CAT considers them distinct from a reporting perspective, and they must be reported distinctly. First, MMs are exempt from reporting their quotes to CAT (Section 6.4(d)(iii) of the CAT NMS Plan). Instead, the exchange is fully responsible for submitting the quotes they receive from MMs. Second, the MMs must inform the exchange of the time that they sent each quote, so the exchange can report it to CAT along with the quote. Third, quotes require fewer data elements than orders.

Each quote must have a unique Quote ID. Specifically, when a trade occurs with a MM quote on one side, the Quote ID in the trade will identify the exact quote. The combination of Exchange ID, Date, Option ID, and Quote ID should be globally unique.

Furthermore, each quote update must also have a unique Quote ID which is different from the Quote ID for the quote being updated. If the exchange only supports a single quote per MM, the event can be so noted, and the Quote ID for the quote that is being replaced is not necessary. Otherwise, the update must also include the Quote ID for the quote that is being updated/replaced by the new quote.

The exchange must guarantee uniqueness of quote IDs throughout the day.

There are three types of quote events in CAT:

**Quote Event:** Used to report a new quote or a quote replacement. When a quote is replaced, the Original Quote ID will identify the quote being replaced, and the Quote ID will provide the new ID for the updated and replaced quote (or note in the event that the market maker can only have one quote active at any given time).

**Complex Quote Event:** Used to report a new quote or quote replacement of a complex option (i.e., a predefined set of legs submitted as a CODE event in the exchange's Option Dictionary). A Complex Quote event includes all legs in ratio as defined in the CODE record, with the "bid" side representing the legs "As Directed" in the CODE record (buying all legs where the *side* field is specified as 'Buy' and selling all legs where the *side* field is specified as 'Sell' for the quantity in specified in the *ratio* field), and the "ask" side representing the legs in the "Opposite" direction as defined in the CODE record. Complex Quote events do not support equity legs.

**Quote Cancel:** Reported when a quote or complex quote is canceled.

For block quotes, each quote in the block would be reported to CAT as a separate quote, with a separate unique Quote ID. In such a case, the quote Sent Timestamp would be the same for each quote from the same block because they were all sent at the same time by the MM. However, the combination of Event Timestamp and Event Sequence Number must be unique for each quote.

Similarly, when a bulk cancel is requested, a separate quote cancel event is required for each quote that is canceled by such a request.

On some exchanges, quotes are allowed to be sent before the trading system is ready to process them. For example, there may be an established protocol where the API documents that quotes sent before a particular time are ignored. Or, a protocol may send a "Now Accepting Quotes" message to market makers, and any quotes sent before that time are ignored. In such cases, those ignored quotes are not processed, so they should not be reported to CAT.

Note that all pre-open quotes are still reportable to CAT. This exception is explicitly for those cases where the exchange allows quotes to be sent before they are officially accepted - but those quotes are neither processed, nor entered into the book, nor accepted for participating in the opening nor any other trading session.

Once the system has started accepting quotes (either because a set time has arrived, or it has sent out a message indicating that quotes are now being accepted), then all quotes must be reported. CAT does not have rules in place for when exchanges start accepting quotes, but it seems that all exchanges start accepting quotes at least five minutes before the start of trading.

For example, in the following diagram, an exchange ignores quotes until they send their "Now Accepting Quotes" message. Thereafter all quotes are processed and reported to CAT.

**Figure 3: Accepted Quotes Processing**

Similarly, if a quote is rejected and neither accepted nor booked, then the quote should not be reported to CAT.

### 5.1.1.Quote Event

The following data elements are to be reported with all quote events. For two-sided quotes, all bid/ask/price/qty values are required. For one-sided quotes, both the price and quantity fields are required, but only for one side.

**Table 32: Quote Events**

Option Quote (OQ)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OQ	R
2	exchange	Exchange ID	The identifier for the exchange that received this quote	R
3	eventTimestamp	Timestamp	The date/time when the quote was received by the exchange	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	marketMaker	Member Alias	The Member Alias assigned by the SRO to identify the market maker issuing the quote. In the case where a market maker has multiple users (e.g., acronyms used to differentiate users within the same MM), there would be a separate Member Alias given to each user or sub-account	R
7	sentTimestamp	Timestamp	The date/time when the market maker sent the quote to the exchange.  Must be populated unless quote record was generated by an exchange system and was not received systematically from a Market Maker.	C
8	optionID	Text (40)	The ID previously assigned to this option in the reporter's option dictionary	R
9	quoteID	Text (40)	When onlyOneQuote=True, the unique identifier assigned to this quote by the exchange. If an askQuoteID value is also provided, then this value will only be applied to the bid side of the quote.  When onlyOneQuote=False, the unique identifier assigned to the bid. To provide a unique identifier for an ask, use the askQuoteID field.  When onlyOneQuote=False, this field must be populated when bidPrice is populated.	C

Option Quote (OQ)				
#	Field Name	Data Type	Description	Include Key
10	onlyOneQuote	Boolean	True if the system allows only one quote per OptionID for this market maker; false otherwise	R
11	originalQuoteID	Text (40)	When onlyOneQuote=False, this field must be populated when the bid from this record replaces a previously submitted bid. This field must not be provided for a bid that does not replace a previous bid, and it should never be populated for an ask. When onlyOneQuote=True, no value is necessary for this field.	C
12	bidPrice	Price	The price being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names).  When onlyOneQuote=False, this field must be populated when quoteID is populated.  At least one of bidPrice and askPrice must be provided.	C
13	bidQty	Unsigned	The quantity being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names)	C
14	askPrice	Price	The price being asked for the option.  When onlyOneQuote=False, this field must be populated when askQuoteID is populated.  At least one of bidPrice and askPrice must be provided.	C
15	askQty	Unsigned	The quantity being asked for the option	C
16	bidDisplayPrice	Price	The display price being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names)	C
17	bidDisplayQty	Unsigned	The display quantity being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names)	C
18	askDisplayPrice	Price	The display price being asked for the option	C
19	askDisplayQty	Unsigned	The display quantity being asked for the option	C
20	cycleDate	Date	Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.  An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date	C

Option Quote (OQ)				
#	Field Name	Data Type	Description	Include Key
			<p>including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	
21	askQuoteID	Text (40)	<p>When onlyOneQuote=True, the unique identifier assigned to the ask by the exchange. If this field is populated, then the quoteID value will only be applied to the bid.</p> <p>When onlyOneQuote=False, the unique identifier assigned to the ask. To provide a unique identifier for a bid, use the quoteID field.</p> <p>If this field is populated, then the askPrice must also be populated.</p>	C
22	originalAskQuoteID	Text (40)	<p>When onlyOneQuote=False, this field must be populated when the ask from this record replaces a previously submitted ask. This field must not be provided for an ask that does not replace a previous ask, and it should never be populated for a bid. When onlyOneQuote=True no value is necessary for this field.</p>	C
23	initiator	Choice	Specifies who initiated the quote: the market maker or exchange	O

Linkage Keys for OQ: (Quote Linkage Retired Effective April 1st 2025)

Quote Key: date, exchange, optionID, quoteID, askQuoteID

Previous Quote Key: date, exchange, optionID, originalQuoteID, originalAskQuoteID

### 5.1.2.Complex Quote Event

The following data elements are to be reported with all complex quote events. For two-sided quotes, all bid/ask/price/qty values are required. For one-sided quotes, both the price and quantity fields are required, but only for one side.

**Table 33: Complex Quote Events**

Complex Quote (OCQ)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OCQ	R
2	exchange	Exchange ID	The identifier for the exchange that received this quote	R
3	eventTimestamp	Timestamp	The date/time when the quote was received by the exchange	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	marketMaker	Member Alias	The Member Alias assigned by the SRO to identify the market maker issuing the quote. In the case where a market maker has multiple users (e.g., acronyms used to differentiate users within the same MM), there would be a separate Member Alias given to each user or sub-account	R
7	sentTimestamp	Timestamp	The date/time when the market maker sent the quote to the exchange.  Must be populated unless quote record was generated by an exchange system and was not received systematically from a Market Maker.	C
8	optionID	Text (40)	The ID previously assigned to this complex option in the reporter's option dictionary (CODE event)	R
9	quoteID	Text (40)	When onlyOneQuote=True, the unique identifier assigned to this quote by the exchange. If an askQuoteID value is also provided, then this value will only be applied to the bid side of the quote.  When onlyOneQuote=False, the unique identifier assigned to the bid. To provide a unique identifier for an ask, use the askQuoteID field.  When onlyOneQuote=False, this field must be populated when bidPrice is populated.	C
10	onlyOneQuote	Boolean	True if the system allows only one quote per OptionID for this market maker; false otherwise	R
11	originalQuoteID	Text (40)	When onlyOneQuote=False, this field must be populated when the bid from this record replaces a previously submitted bid. This field must not be provided for a bid that does not replace a previous bid, and it should never be populated for an ask. When onlyOneQuote=True, no value is necessary for this field.	C

### Complex Quote (OCQ)

#	Field Name	Data Type	Description	Include Key
12	bidPrice	Price	<p>The price being bid for the complex option as defined in the reporter's option dictionary CODE event.</p> <p>When onlyOneQuote=False, this field must be populated when quoteID is populated.</p> <p>Price may be positive, negative or zero and is specified as a net debit or net credit price for all legs.</p> <p>At least one of bidPrice and askPrice must be provided.</p>	C
13	bidQty	Unsigned	<p>The number of units of the complex strategy as defined in the reporter's option dictionary CODE event. This is not necessarily the number of contracts for each leg.</p>	C
14	askPrice	Price	<p>The price being asked for the complex option in the opposite direction as defined in the reporter's option dictionary CODE event. Meaning that legs specified as "Buy" would be sold, and legs specified as "Sell" would be bought.</p> <p>Price may be positive, negative or zero and is specified as a net debit or net credit price for all legs. When onlyOneQuote=False, this field must be populated when askQuoteID is populated.</p> <p>At least one of bidPrice and askPrice must be provided.</p>	C
15	askQty	Unsigned	<p>The number of units of the complex strategy in the opposite direction as defined in the reporter's option dictionary CODE event. This is not necessarily the number of contracts for each leg.</p>	C
16	bidDisplayPrice	Price	<p>The display price being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names)</p>	C
17	bidDisplayQty	Unsigned	<p>The display quantity being bid for the option (can be zero in two-sided quote which supports spread quotes in low prices names)</p>	C
18	askDisplayPrice	Price	<p>The display price being asked for the option</p>	C
19	askDisplayQty	Unsigned	<p>The display quantity being asked for the option</p>	C
20	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date</p>	C

Complex Quote (OCQ)				
#	Field Name	Data Type	Description	Include Key
			<p>including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	
21	askQuoteID	Text (40)	<p>When onlyOneQuote=True, the unique identifier assigned to the ask by the exchange. If this field is populated, then the quoteID value will only be applied to the bid.</p> <p>When onlyOneQuote=False, the unique identifier assigned to the ask. To provide a unique identifier for a bid, use the quoteID field.</p> <p>If this field is populated, then the askPrice must also be populated.</p>	C
22	originalAskQuoteID	Text (40)	<p>When onlyOneQuote=False, this field must be populated when the ask from this record replaces a previously submitted ask. This field must not be provided for an ask that does not replace a previous ask, and it should never be populated for a bid. When onlyOneQuote=True no value is necessary for this field.</p>	C
23	initiator	Choice	Specifies who initiated the quote: the market maker or exchange	O

Linkage Keys for **OCQ**:

**Complex Quote Key:** date, exchange, optionID, quoteID, askQuoteID

**Previous Complex Quote Key:** date, exchange, optionID, originalQuoteID, originalAskQuoteID

Note: FINRA CAT does not perform linkage on Quote events effective April 1, 2025.

### 5.1.3.Quote Cancel Event

A quote cancel event is used to report the cancelation of an option quote or a complex quote.

The following data elements are required for quote cancel events.

**Table 34: Quote Cancel Events**

Option Quote Cancel (OQC)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OQC	R
2	exchange	Exchange ID	The identifier for the exchange processing the quote cancel	R
3	eventTimestamp	Timestamp	The date/time when the quote cancel occurred	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	marketMaker	Member Alias	The Member Alias assigned by the SRO to identify the market maker issuing the quote cancel. In the case where a market maker has multiple users (e.g., acronyms used to differentiate users within the same MM), there would be a separate Member Alias given to each user or sub-account	R
7	sentTimestamp	Timestamp	The date/time when the market maker sent the quote cancel to the exchange. This field is only required if the cancel initiator is the market maker	C
8	optionID	Text (40)	The ID previously assigned to this option in the reporter's option dictionary	R
9	quoteID	Text (40)	The unique identifier assigned to this quote to be canceled by the exchange. This field can be omitted if onlyOneQuote is true  If onlyOneQuote=False, then this field will only be used to cancel bids. To cancel an ask, provide the relevant identifier in the askQuoteID field.	C
10	onlyOneQuote	Boolean	True if the system allows only one quote for this market maker; false otherwise	R
11	initiator	Choice	Specifies who initiated the cancel: the market maker or exchange	R
12	cancelReason	Choice	This code represents the reason why the quote was canceled. The actual value of the code is exchange specific. See Data Dictionary for the list of allowed values	O
13	cycleDate	Date	Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global	C

Option Quote Cancel (OQC)				
#	Field Name	Data Type	Description	Include Key
			<p>trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	
14	askQuoteID	Text (40)	<p>The unique identifier assigned to cancel the ask to be canceled by the exchange. This field can be omitted if onlyOneQuote is true.</p> <p>If onlyOneQuote=False, then this field will only be used to cancel asks. To cancel a bid, provide the relevant identifier in the quoteID field.</p>	C

Linkage Keys for OQC: (Quote Linakge Retired Effective April 1st 2025)

Quote Key: date, exchange, optionID, quoteID, askQuoteID

## 5.2. Options Orders

Order events for options are reported as either simple or complex. Simple option orders are orders for a single option series (including flex options). Complex option orders contain two or more simple option orders, or at least one each of a simple option order and equity order.

For CAT, an order for a complex option will be reported at the parent complex level, and additional orders will be reported if/when orders are created for each leg. Some exchanges create leg order reporting events as soon as the parent is created, and other exchanges create leg order reporting events only when an execution is created. CAT supports both reporting scenarios. In the latter case, when no leg executions occur, it is possible that no leg-level order events are generated.

Each options order routed to (and then accepted by) an exchange must be reported to CAT. Options orders that are routed to an exchange and then rejected by the exchange are not reportable by the exchange. When an exchange accepts an options order, it must report either a single Option Order Accepted event, or a single Complex Option Order Accepted event followed by one Accepted event for each leg of the complex option.

For manual/floor trades, this will be the identifier for the physical broker. For quotes, it will be an alias for the market maker behind the quote. For system trades, it will be an alias for the system handling that order.

### 5.2.1.Order Accepted Events

#### 5.2.1.1. Simple Option Order Accepted Event

A simple option order can represent either a stand-alone option series, or one leg of a complex parent order. If the order represents a leg of a complex order, then the field Complex Order ID will be set to the Order ID of the parent complex order. If necessary, the event timestamp and sequence number could be the same as those in the parent complex order.

Fields marked with a lower-case 'r' are required if the event represents a normal option order, and they are conditional if the event represents a leg of a complex order.

**Table 35: Simple Option Order Accepted Event**

Simple Option Order Accepted (OOA)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OOA	R
2	exchange	Exchange ID	The identifier for the exchange which has received this order	R
3	eventTimestamp	Timestamp	The date/time of order receipt	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C

### Simple Option Order Accepted (OOA)

#	Field Name	Data Type	Description	Include Key
6	optionID	Text (40)	The ID previously assigned to this option in the reporter's option dictionary	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	routingParty	Text (8)	The ID string used to identify the entity that sent this routed order.  This must be provided for simple options (i.e. complexOrderID is null). Leave unset if the option is a leg of a complex order.	C
9	routedOrderID	Text (40)	The ID assigned to this order by the client when submitting the order to the exchange.  This must be provided for simple options (i.e. complexOrderID is null). Leave unset if the option is a leg of a complex order.	C
10	session	Text (40)	The name of the session used to send the order from the routing member firm to the exchange.  This must be provided for simple options (i.e. complexOrderID is null). Leave unset if the option is a leg of a complex order	C
11	side	Choice	The side of the order: See entry for "side" in the Data Dictionary for acceptable values	R
12	price	Price	The limit price of the order, if applicable. This must be provided when orderType indicates a limit order.	C
13	quantity	Unsigned	The order quantity	r
14	displayQty	Unsigned	The displayed quantity for this order	r
15	displayPrice	Price	The displayed price for this order. This must be provided on simple option orders (i.e. complexOrderID is null) when displayQty is greater than zero.	C
16	workingPrice	Price	The working price of the order at the time it was accepted. Note that Modified events must be reported to CAT anytime the working price changes	C
17	openCloseIndicator	Choice	the position of the order: either Open, Close, or Unspecified	R
18	orderType	Choice	The order type is one of several possible pre-defined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types.	R

### Simple Option Order Accepted (OOA)

#	Field Name	Data Type	Description	Include Key
19	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	r
20	handlingInstructions	Name / Value Pairs	The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details	C
21	orderAttributes	Name/Value Pairs	Defines reportable attributes of an order, that are not necessarily handling instructions	C
22	exchOriginCode	Choice	Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values	r
23	coverage	Choice	Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values	r
24	executingFirm	Alphanumeric(8)	The OCC number of the executing/give-up firm	r
25	cmtaFirm	Alphanumeric(8)	The OCC number of the CMTA firm (only valid for CMTA trades)	C
26	member	Member Alias	The identifier for the member firm that is responsible for the order	R
27	mktMkrSubAccount	Text (20)	The sub-account for the market maker, only valid when Origin Code is Market Maker	C
28	nbbPrice	Price	The NBBO at the moment just before accepting this order.	R
29	nbbQty	Unsigned		O
30	nboPrice	Price		R
31	nboQty	Unsigned		O
32	complexOrderID	Text (40)	The Order ID for the parent complex order, if this order represents a leg of a complex order.  This must be provided if the order represents a leg of a complex order.	C
33	complexOptionID	Text (40)	The optionID for the parent complex order, if this order represents a leg of a complex order. Not reported if the complex order's orderID is globally unique	C
34	cycleDate	Date	Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In	C

Simple Option Order Accepted (OOA)				
#	Field Name	Data Type	Description	Include Key
			<p>global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>

**Complex Order Key:** date, exchange, [complexOptionID,] complexOrderID

#### 5.2.1.2. Complex Option Order Accepted Event

Each complex option order routed to (and accepted by) an exchange must be reported to CAT. CAT allows each leg of a complex order to be reported separately, thus the parent order is relatively small with most order details reported on behalf of each leg. If possible, exchanges should report leg events for all complex orders whether or not the complex order executes. Leg events must be reported for all legs for all executed complex orders.

The number of legs, and description of each leg is encapsulated in the dictionary entry for the Option ID. In addition to the Complex Order Accepted event, at least one Option Order Accepted event must be submitted for each leg of a complex order (Stock Leg Order Accepted for non-option legs).

Some systems allow individual legs to carry specific instructions. Thus, order type information is relevant on a per-leg basis, and not reported for the complex parent itself. Furthermore, some exchange don't ever create leg orders within the trading system. Instead they create synthetic leg order events for CAT reporting purposes at the time of execution. For these exchanges, the execution triggers the leg level order accept events, so for complex orders that are canceled without executions there will not be any leg order events. Thus, the model supports both processes, where leg orders can be created upon initial acceptance and at the point of execution.

When a leg order is created, each leg must have a unique internal Order ID. Some reporters already create such derived order representations, so these IDs are easy to acquire. Others do not assign identifiers to legs. However, all reporters will be expected to report individual order events for each leg that is executed. One suggested method for creating unique leg Order IDs is to use the Order ID of the parent complex order, combined with the leg number (its ordering in the complex option definition). Another is to combine the Complex Order ID with the Option ID and Side of that leg.

Qualified Contingent Cross orders are not exposed to other market participants, and require special handling on some exchanges. In certain cases, these orders may only be processed as individual leg orders and no Complex Option Order Accepted event is reported.

Note that the following fields are conditional in this event. If they are present, then they do not have to appear in the individual order events for option legs, unless the value for a leg would be different from the value in the complex order. In other words, these field values apply to all option legs, unless the option leg contains a different value. If these fields are missing, then the data must be present in each option leg.

**Route Link Key:** date, optionID, routingParty, routedOrderID, session, exchange

#### 5.2.1.3. Stock Leg Order Event

Similar to option legs, stock legs are reported individually, with a link to the parent complex order. If necessary, the event timestamp and sequence number could be the same as those in the parent complex order.

See the explanation about leg Order IDs in the section on complex orders. The same process applies to Order IDs for stock legs.

**Table 37: Stock Leg Event**

Option Stock Leg (OSL)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OSL	R

### 5.2.2.Order Modified Events

An event must be sent to CAT to report any customer modification to the order. Additionally, an event must be sent to CAT to report any changes to the order due to an exchange action, including updates related to changes in market conditions.

Events that should be reported include, but are not limited to:

- Any customer update that passes validation and is successfully processed by the trading system
- Changes to the available quantity of the order, such as liquidity returning from an away market unexecuted
- Changes to the working price, display price, or display quantity
- Changes to the executability of an order, such as when a regular-hours order arrived prior to the opening time and it is now the opening time or when an order expires but no explicit cancellation is provided

### 5.2.2.1. Option Order Modified Event

This event supports all possible modifications to a simple option order and the legs of multi-leg orders.

The full state of the order should be reported, including fields that did not change as a result of the modification.

**Table 38: Option Order Modified Event**

Option Order Modified (OOM)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OOM	R
2	exchange	Exchange ID	The identifier for the exchange which has received this order	R

**Complex Order Key:** date, exchange, [complexOptionID,] complexOrderID

#### 5.2.2.2. Complex Option Order Modified Event

If the price or quantity changes on a complex order, a complex option order modified event needs to be submitted to CAT. If a change to the parent complex order causes attributes in the leg orders to change, then Order Modified events must be reported for each affected leg. Note that this only applies if a leg order actually exists at the time of the modification to the complex order. For exchanges that create leg orders at execution, only the complex order needs to be modified. However, if a change in net price to the complex order causes the price of the leg orders to change, changes to the leg order prices are not reportable to CAT.

If the internal order ID of the complex order changes, then modified reports must be generated for every leg that exists at the time of the modification, referencing the new order ID of the parent complex order.

The full state of the modified order must be reported, including fields that did not change value as a result of the modification.

**Table 39: Complex Option Order Modified Event**

Complex Option Order Modified (OCOM)				
#	Field Name	Data Type	Description	Include Key

**Order Key:** date, exchange, optionID, orderID

**Cross Order Key:** date, exchange, orderID, pairedOrderID (if pairedOrderID is populated in order attributes name value pair)

**Route Link Key:** date, optionID, routedOrderID, exchange, routingParty, session

**Previous Order Key:** date, exchange, optionID, originalOrderID

#### 5.2.2.3. Stock Leg Modified Event

When a stock leg is modified, an event must be reported to CAT with the modified data elements. The full state of the modified order must be reported, including fields that did not change value as a result of the modification.

**Table 40: Stock Leg Modified Event**

Option Stock Leg Modified				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OSLM	R
2	exchange	Exchange ID	The identifier for the exchange which has accepted this order	R
3	eventTimestamp	Timestamp	The date/time at which the modification was received or originated	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text(10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	originalOrderID	Text (40)	The internal order ID that used to be assigned to this order until this modification happened. If the order kept its ID through the modification, then this value need not be included	C
9	initiator	Choice	Indicates who initiated the order modification: See entry for "initiator" in the Data Dictionary for acceptable values	R
10	nbbPrice	Price	The NBBO at the moment the stock leg was	R

### Option Stock Leg Modified

#	Field Name	Data Type	Description	Include Key
11	nbbQty	Unsigned	modified.	O
12	nboPrice	Price		R
13	nboQty	Unsigned		O
14	complexOrderID	Text (40)	The Order ID for the parent complex order. If the ID for the complex order also changed, then this would be the new Order ID for the complex order.  This must be provided if the order represents a leg of a complex order.	R
15	complexOptionID	Text (40)	The optionID for the parent complex order. Not reported if the complex order's orderID is globally unique	C
16	price	Price	the limit price of the order, if applicable	C
17	displayPrice	Price	The displayed price for this order (required if displayQty is nonzero)	C
18	quantity	Unsigned	The order quantity	R
19	leavesQty	Unsigned	The number of shares left open after the modification has occurred	R
20	displayQty	Unsigned	The displayed quantity for this order	R
21	orderType	Choice	The order type is one of several possible pre-defined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types	R
22	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
23	handlingInstructions	Name / Value Pairs	The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details	C
24	orderAttributes	Name/Value Pairs	Defines reportable attributes of an order that are not necessarily handling instructions	C
25	clearingFirm	Text (10)	Firm receiving the stock execution	O
26	member	Member Alias	The identifier for the member firm that is responsible for the order. This is the same member as in the complex order	R
27	cycleDate	Date	Set equal to the US business date upon which the	C

Option Stock Leg Modified				
#	Field Name	Data Type	Description	Include Key
			<p>daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>

**Complex Order Key:** date, exchange, [complexOptionID,] complexOrderID

#### 5.2.2.5. Complex Option Order Adjusted Event

When a complex option is modified in such a way that only impacts the price and/or quantity, an instance of this event can be reported in place of the Complex Option Order Modified event.

The only types of modifications that are allowed to be reported with this event are changes to the price or quantity of the order.

For changes in quantity, both quantity and leavesQty are required (i.e., either both are reported or neither are reported).

**Table 42: Complex Option Order Adjusted Event**

Complex Option Order Adjusted (OCOJ)				
#	Field Name	Data Type	Description	Include Key

**Complex Order Key:** date, exchange, [complexOptionID,] complexOrderIDOptions

### 5.2.3. Order Canceled Event

An order canceled event is used to report a cancelation of a simple option order or a complex option order. For complex options orders, if leg-level orders have been opened before a canceled event, then canceled events must be reported for each of the leg orders as well.

CAT also supports partial cancels. Partial canceled events for complex orders follow the same rule, if there are open leg-level orders before a canceled event, partial canceled events must also be reported for each of the legs.

Note that the order canceled events contains both the fields optionID and symbol. Both of these fields are conditional. If the order canceled event is for a stock leg order corresponding to a complex option order, then the symbol field is mandatory. If the order canceled event is for a simple option order, a complex option order, or an option leg order of a complex order, then the field optionID is mandatory.

**Table 44: Option Order Canceled**

Option Order Canceled (OOC)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OOC	R
2	exchange	Exchange ID	The ID for the exchange reporting the order canceled	R
3	eventTimestamp	Timestamp	The date/time at which the cancellation was received or originated	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	optionID	Text (40)	The ID previously assigned to this option in the reporter's option dictionary. Used if this cancel is for a simple option order or complex option order.  Either optionID or symbol, but not both, must be provided.	C
7	symbol	Symbol	The stock symbol in the symbology of the listing exchange, or the reporter's symbology mapping as appropriate. Used only if this cancel is for the stock leg of a complex option order.  Either optionID or symbol, but not both, must be provided.	C
8	orderID	Text (40)	The internal order ID assigned to the order by the exchange. If a leg is being canceled, the orderID will represent the leg order being canceled	R
9	cancelQty	Unsigned	The quantity being canceled	R
10	leavesQty	Unsigned	The quantity left open after the cancel event (zero for	R

Option Order Canceled (OOC)				
#	Field Name	Data Type	Description	Include Key
			a full cancel)	
11	initiator	Choice	Indicates who initiated the order cancellation: See entry for "initiator" in the Data Dictionary for acceptable values	R
12	cancelReason	Choice	Code representing the reason why the order was canceled. The actual value of the code is exchange specific. See Data Dictionary for the list of allowed values	O
13	member	Member Alias	The identifier for the member firm that is responsible for the order	R
14	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. **Order Key:** date, exchange, optionID, orderID

**Order Key:** date, exchange, symbol, orderID

#### 5.2.4.Routing Orders

##### 5.2.4.1. Internal Routing and Floor Activity

Internal routes on the exchange are different from internal routes in a Broker Dealer. In particular, internal routes at a broker dealer are required to be reported to CAT, but internal routes at an exchange are not.

However, there are cases where knowing the system or process of where an order executed is useful, for example when orders are routed through various internal systems on the floor. These processes differ between exchanges and the use cases are incredibly diverse. Furthermore, there is no guidance in the CAT requirements as to what is or is not supposed to be reported in these cases, so we need to be flexible in allowing a diverse set of items to be reported. These somewhat reportable data elements arrive in two forms.

First, an order may be executed with some additional information that was not available when it was placed (e.g., as part of an auction, or through some floor trading workstation). Thus, there is an element available on Trade Events (Execution Codes), which provides a way to add special exchange specific codes to an execution. The Execution Codes is a name/value pair field (like order Handling Instructions) and can provide additional execution information, like where a trade may have been executed on the floor, or supplemental execution/clearing information.

Additionally, the Note Event (reference Section 3.7.1), which contains either an Order ID or a Quote ID to link the note to a specific order or quote can be used to add specific instructions related to the order.

Some systems are composed of multiple subsystems, each having their own reporting and order identification requirements. In such cases, it may be extremely difficult or time consuming to coerce events into a single set of unique order IDs and reporting. Thus, an internal route event is also provided for reporting an order as it progresses between internal subsystems, and possibly changes internal order ID.

#### **5.2.4.2. Option Route Event**

External routes from an options exchange come in three basic forms: routing all or part of a simple option series order to an away market, routing two stock legs to be crossed, and routing a stock leg for execution. All of these events require certain pieces of information to enable linkage creation that can track the entire order lifecycle.

The following Option Route Event is used to report when an exchange routes a simple option order, or any leg of a complex option order.

**Table 45: Option Route Event**

Option Order Route (OOR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OOR	R
2	exchange	Exchange ID	The identifier for the exchange which is routing the order away	R
3	eventTimestamp	Timestamp	The date/time at which the order was routed	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol of the stock leg being routed away - only for routing stock legs.  Either optionID or symbol, but not both, must be provided.	C
7	optionID	Text (40)	The ID of the option being routed away.  Either optionID or symbol, but not both, must be provided.	C
8	orderID	Text (40)	The internal order ID of the order being routed away	R
9	routingParty	Text (8)	The ID string used to identify the entity that is receiving this routed order	R
10	routedOrderID	Text (40)	The ID of the routed order, as represented in the order message sent to the routing broker	R
11	session	Text (40)	The ID of the session used to send the order to the routing broker	R
12	side	Choice	The side of the order: See entry for "Side" in the Data Dictionary for acceptable values	R
13	price	Price	The price of the order, if applicable. This must be provided when orderType indicates a limit order.	C
14	quantity	Unsigned	The order quantity	R
15	displayQty	Unsigned	The displayed quantity for this order	R
16	orderType	Choice	The order type is one of several possible pre-defined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types	R

Option Order Route (OOR)				
#	Field Name	Data Type	Description	Include Key
17	coverage	Choice	Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values	R
18	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
19	handlingInstructions	Name / Value Pairs	The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details	C
20	result	Choice	The result of the route request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR - No Response) See the data dictionary for a list of permissible values	O
21	resultTimestamp	Timestamp	The date/time when the exchange received the result of the route request. This timestamp is not required if the value for the result field is No Response	O
22	nbbPrice	Price	The NBBO at the moment just before routing this order	R
23	nbbQty	Unsigned		O
24	nboPrice	Price		R
25	nboQty	Unsigned		O
26	complexOrderID	Text (40)	The Order ID for the parent complex order, if this order represents a leg of a complex order. This must be provided if the order represents a leg of a complex order.	C
27	complexOptionID	Text (40)	The optionID for the parent complex order, if this order represents a leg of a complex order. Not reported if the complex order's orderID is globally unique	C
28	member	Member Alias	The identifier for the member firm that is responsible for the order	R
29	cycleDate	Date	Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.  An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an	C

Option Order Route (OOR)				
#	Field Name	Data Type	Description	Include Key
			<p>event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>

**Complex Order Key:** date, exchange, [complexOptionID,] complexOrderID

#### 5.2.4.3. Complex Option Route Event

This is used to report when an exchange routes a complex option order to an external destination (e.g. an exchange receives a complex order from a firm and forwards it to a Floor Broker). Note that most exchanges do not route complex orders externally; this event only applies for exchanges that do.

**Table 46: Complex Option Route Event**

Complex Option Order Route (OCOR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OCOR	R
2	exchange	Exchange ID	The ID for the exchange which is routing this order.	R
3	eventTimestamp	Timestamp	The date/time at which the order was routed.	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps.	C

### Complex Option Order Route (OCOR)

#	Field Name	Data Type	Description	Include Key
5	seqNumSub	Text (10)	A sequence number subsystem identifier.	C
6	optionID	Text (40)	The ID of the option being routed away.	R
7	orderID	Text (40)	The internal order ID of the order being routed away.	R
8	routingParty	Text (8)	The ID string used to identify the entity that is receiving this routed order.	R
9	routedOrderID	Text (40)	The ID of the routed order, as represented in the order message sent to the routing broker.	R
10	session	Text (40)	The ID of the session used to send the order to the destination.	R
11	side	Choice	The side of the order, for a complex order the values for side can be either "AsDirected" or "Opposite", see entry for "Side" in the Data Dictionary for acceptable values	R
12	price	Price	The net price of the order, which may be negative.	C
13	quantity	Unsigned	The order quantity.	R
14	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values.	R
15	handlingInstructions	Name / Value Pairs	The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details.	C
16	result	Choice	The result of the route request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR - No Response) See the data dictionary for a list of permissible values.	O
17	resultTimestamp	Timestamp	The date/time when the exchange received the result of the route request. This timestamp is not required if the value for the result field is No Response.	O
18	isGloballyUnique	Boolean	If reported with a value of true, then the orderID is globally unique across all optionIDs for this exchange/date. This means that no other complex order can have the same orderID. Furthermore, leg events for this complex order must be reported with just the complexOrderID and not the complexOptionID.	O
19	coverage	Choice	Specifies whether the order is covered or uncovered. This field may also be filled in as	C

Complex Option Order Route (OCOR)				
#	Field Name	Data Type	Description	Include Key
			unspecified. See the data dictionary for a list of acceptable values.	
20	member	Member Alias	The identifier for the member firm that is responsible for the order.	R
21	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

Linkage Keys for **OCOR**:

**Order Key:** date, exchange, optionID, orderID (if isGloballyUnique is false)

**Route Link Key:** date, exchange, routingParty, routedOrderID

#### 5.2.4.4. Internal Option Route Event

This event provides a means by which options (and legs of complex options) can be routed between internal systems.

**Table 47: Internal Option Route Event**

Internal Option Route (OIR)				
#	Field Name	Data Type	Description	Include Key

Internal Option Route (OIR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OIR	R
2	exchange	Exchange ID	The ID for the exchange which is routing this order	R
3	eventTimestamp	Timestamp	The date/time at which the order was routed	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol of the stock leg being routed away - only for routing stock legs.  Either optionID or symbol, but not both, must be provided.	C
7	optionID	Text (40)	The ID of the option being routed away.  Either optionID or symbol, but not both, must be provided.	C
8	orderID	Text (40)	The internal order ID of the order being routed away	R
9	routingParty	Text (8)	The ID string used to identify the internal subsystem that is receiving this routed order. This value must match the value reported by the receiving subsystem in the <code>routingParty</code> field of their Order Accepted report	R
10	routedOrderID	Text (40)	The ID assigned to this order by the exchange when submitting the order to the subsystem. This value must match the value reported by the receiving subsystem in the <code>routedOrderID</code> field of their Order Accepted report	R
11	session	Text (40)	The ID assigned to the specific session used when sending the order from the sending subsystem to the receiving subsystem. This value must match the value reported by the receiving subsystem in the <code>session</code> field of their Order Accepted report	R
12	side	Choice	The side of the order: See entry for "Side" in the Data Dictionary for acceptable values	R
13	price	Price	The price of the order, if applicable. This must be provided when orderType indicates a limit order.	C
14	quantity	Unsigned	The order quantity	R
15	displayQty	Unsigned	The displayed quantity for this order	R

### Internal Option Route (OIR)

#	Field Name	Data Type	Description	Include Key
16	orderType	Choice	The order type is one of several possible pre-defined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types	R
17	coverage	Choice	Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values	R
18	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
19	handlingInstructions	Name / Value Pairs	The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details.	C
20	result	Choice	The result of the route request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR - No Response) See the data dictionary for a list of permissible values	O
21	resultTimestamp	Timestamp	The date/time when the exchange received the result of the route request. This timestamp is not required if the value for the result field is No Response	O
22	complexOrderID	Text (40)	The Order ID for the parent complex order, if this order represents a leg of a complex order. This must be provided if the order represents a leg of a complex order.	C
23	complexOptionID	Text (40)	The optionID for the parent complex order, if this order represents a leg of a complex order. Not reported if the complex order's orderID is globally unique	C
24	member	Member Alias	The identifier for the member firm that is responsible for the order	R
25	cycleDate	Date	Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.  An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an	C

			<p>event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	

Linkage Keys for **OIR**:

**Order Key:** date, exchange, optionID, orderID

**Order Key:** date, exchange, symbol, orderID

**Route Link Key:** date, optionID, routingParty, routedOrderID, session, exchange

**Route Link Key:** date, symbol, routingParty, routedOrderID, session, exchange

**Complex Order Key:** date, exchange, [complexOptionID,] complexOrderID

#### 5.2.4.5. Internal Complex Option Route Event

While complex orders are not routed between exchanges, they may be routed internally. This event provides a means by which complex options can be routed between internal systems.

**Table 48: Internal Complex Option Route Event**

Internal Complex Option Route (OCIR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OCIR	R
2	exchange	Exchange ID	The ID for the exchange which is routing this order	R
3	eventTimestamp	Timestamp	The date/time at which the order was routed	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C

### Internal Complex Option Route (OCIR)

#	Field Name	Data Type	Description	Include Key
6	optionID	Text (40)	The ID of the option being routed away	R
7	orderID	Text (40)	The internal order ID of the order being routed away	R
8	routingParty	Text (8)	The ID string used to identify the internal subsystem that is receiving this routed order. This value must match the value reported by the receiving subsystem in the <code>routingParty</code> field of their Order Accepted report	R
9	routedOrderID	Text (40)	The ID assigned to this order by the exchange when submitting the order to the subsystem. This value must match the value reported by the receiving subsystem in the <code>routedOrderID</code> field of their Order Accepted report	R
10	session	Text (40)	The ID assigned to the specific session used when sending the order from the sending subsystem to the receiving subsystem. This value must match the value reported by the receiving subsystem in the <code>session</code> field of their Order Accepted report	R
11	side	Choice	The side of the order, for a complex order the values for side can be either "AsDirected" or "Opposite", see entry for "Side" in the Data Dictionary for acceptable values	R
12	price	Price	The net price of the order, which may be negative.	C
13	quantity	Unsigned	The order quantity	R
14	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
15	handlingInstructions	Name / Value Pairs	The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details	C
16	orderAttributes	Name/Value Pairs	Defines reportable attributes of an order that are not necessarily handling instructions	C
17	isGloballyUnique	Boolean	If reported with a value of true, then the orderID is globally unique across all optionIDs for this exchange/date. This means that no other complex order can have the same orderID. Furthermore, leg events for this complex order must be reported with just the complexOrderID and not the complexOptionID	O
18	exchOriginCode	Choice	Exchange defined code designating the origin of the order, see data dictionary for list of acceptable	C

Internal Complex Option Route (OCIR)				
#	Field Name	Data Type	Description	Include Key
			values	
19	coverage	Choice	Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values	C
20	executingFirm	Alphanumeric(8)	The OCC number of the executing/give-up firm	C
21	cmtaFirm	Alphanumeric(8)	The OCC number of the CMTA firm (only valid for CMTA trades)	C
22	mktMkrSubAccount	Text (20)	The sub-account for the market maker, only valid when Origin Code is Market Maker	C
23	member	Member Alias	The identifier for the member firm that is responsible for the order	R
24	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

Linkage Keys for **OCIR**:

**Order Key:** date, exchange, optionID, orderID

**Route Link Key:** date, optionID, routingParty, routedOrderID, session, exchange

#### 5.2.4.6. Modify Option Route Event

When an exchange initiates a modify or cancel/replace request on an option or stock leg order it has previously routed away, it must report its intent to modify the order, using a Modify Option Route Event.

If the request does not change the routed order ID, then both routedOrderID and routedOriginalOrderID must be the same.

Note that the Modify Option Route event contains both the fields optionID and symbol. Both of these fields are conditional. If the Modify Option Route event is for a stock leg order, then the symbol field is mandatory and optionID field is not necessary. If the Modify Option Route event is for a simple option order, or an option leg order of a complex order, then the field optionID is mandatory.

**Table 49: Modify Option Route Event**

Modify Option Route (OOMR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OOMR	R
2	exchange	Exchange ID	The ID for the exchange modifying the routed order	R
3	eventTimestamp	Timestamp	The date/time when the exchange made the modify request	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias.  Either optionID or symbol, but not both, must be provided.	C
7	optionID	Text (40)	The ID of the option being routed away.  Either optionID or symbol, but not both, must be provided.	C
8	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
9	routingParty	Text (8)	The ID string used to identify the entity that received this routed order	R

### Modify Option Route (OOMR)

#	Field Name	Data Type	Description	Include Key
10	routedOrderID	Text (40)	The new routed ID for the order, which will be used to refer to the routed order after the modification (in FIX, ClOrdID - in OUCH, Replacement Order Token)	R
11	routedOriginalOrderID	Text (40)	The routed ID for the order being modified, as sent to the routing broker in the original route message, or the most recent modify message (in FIX OrigClOrdID, in OUCH Existing Order Token)	R
12	session	Text (40)	The ID assigned to the session used to send the modify request from the exchange to the routing broker- must also match the session in the original Order Route message for this order	R
13	price	Price	The limit price of the order, if applicable. This must be provided when orderType indicates a limit order.	C
14	quantity	Unsigned	The order quantity	R
15	displayQty	Unsigned	The displayed quantity for this order	R
16	orderType	Choice	The type of order being submitted (e.g., market, limit). See the corresponding entry in the Data Dictionary for more details about order types	R
17	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
18	handlingInstructions	Name/Value Pairs	Can include zero or more handling instructions, as described in Data Dictionary for Handling Instructions	C
19	coverage	Choice	Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values	R
20	result	Choice	The result of the modify request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR - No Response) See the data dictionary for a list of permissible values	O
21	resultTimestamp	Timestamp	The date/time when the exchange received the result of the modify request. This timestamp is not required if the value for the result field is No Response	O
22	nbbPrice	Price	The national best bid price at the moment the trade occurred	R
23	nbbQty	Unsigned	The national best bid quantity at the moment the	O

Modify Option Route (OOMR)				
#	Field Name	Data Type	Description	Include Key
			trade occurred	
24	nboPrice	Price	The national best offer price at the moment the trade occurred	R
25	nboQty	Unsigned	The national best offer quantity at the moment the trade occurred	O
26	member	Member Alias	The identifier for the member firm that is responsible for the order	R
27	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

Linkage Keys for **OOMR**:

**Order Key:** date, exchange, optionID, orderID

**Order Key:** date, exchange, symbol, orderID

**Route Link Key:** date, optionID, routingParty, routedOrderID, exchange

**Route Link Key:** date, symbol, routingParty, routedOrderID, exchange

**Previous Route Link Key:** date, optionID, routingParty, routedOriginalOrderID, exchange

**Previous Route Link Key:** date, symbol, routingParty, routedOriginalOrderID, exchange

#### 5.2.4.7. Option Cancel Route Event

When an exchange initiates a cancel request on an order that has been previously routed away, it must report the intent to cancel, using an Option Cancel Route Event.

Note that the Option Cancel Route event contains both the fields `optionID` and `symbol`. Both of these fields are conditional. If the Option Cancel Route event is for a stock leg order, then the `symbol` field is mandatory and `optionID` field is not necessary. If the Option Cancel Route event is for a simple option order, or an option leg order of a complex order, then the field `optionID` is mandatory.

**Table 50: Option Cancel Route Event**

Option Cancel Route (OOCR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OOCR	R
2	exchange	Exchange ID	The ID for the exchange canceling the routed order	R
3	eventTimestamp	Timestamp	The date/time when the cancel request was sent to the routing firm	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias.  Either <code>optionID</code> or <code>symbol</code> , but not both, must be provided.	C
7	optionID	Text (40)	The ID of the option being routed away.  Either <code>optionID</code> or <code>symbol</code> , but not both, must be provided.	C
8	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
9	routingParty	Text (8)	The ID string used to identify the entity that received this routed order. This value will match the value on the Route event for the order being canceled	R
10	routedOrderID	Text (40)	The routed ID for the order being canceled - must also match the <code>routedOrderID</code> in the original Order Route message for this order	R

Option Cancel Route (OOCR)				
#	Field Name	Data Type	Description	Include Key
11	session	Text (40)	The session ID on which the cancel request is being made - must also match the session in the original Order Route message for this order	R
12	desiredLeavesQty	Unsigned	The desired number of shares remaining in the order after the cancel request has been issued. A value of zero indicates a full cancel	R
13	result	Choice	The result of the cancel request. (A request can be ACK - Acknowledged, REJ - Rejected, or NR - No Response) See the data dictionary for a list of permissible values	O
14	resultTimestamp	Timestamp	The date/time when the exchange received the result of the cancel request. This timestamp is not required if the value for the result field is No Response	O
15	member	Member Alias	The identifier for the member firm that is responsible for the order	R
16	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

Linkage Keys for **OOCR**:

**Order Key:** date, exchange, optionID, orderID

**Order Key:** date, exchange, symbol, orderID

**Route Link Key:** date, optionID, routingParty, routedOrderID, exchange

**Route Link Key:** date, symbol, routingParty, routedOrderID, exchange

### 5.2.5.Trades and Fills

All trades on an options exchange involving options are reported as two sided trades, with appropriate clearing information for each side. In the case where an order is routed away, the trade is still reported as a two-sided trade, but without an order on one side (that side will just have clearing information).

Trades off-exchange for non-option legs are reported as one-sided pass through fill events. Note the difference between a trade which the exchange transacted and a fill which the exchange is passing on. Both events are reportable, but they will be reported in different ways. The former as a two-sided trade, and the latter as either a one-sided fill.

#### 5.2.5.1. Simple Option Trade Event

Simple option trade events are two-sided trade reports, providing details about both sides of the trade for an option. The same event is used for both simple options trades and trades for each leg of a complex option.

This section will deal only with simple option trades, the following section will demonstrate how the same event type will be used to report trades at the leg level of complex options.

#### Option Trade Event

Each option trade contains the following data elements.

**Table 51: Option Trade Event**

Option Trade (OT)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OT	R
2	exchange	Exchange ID	The ID of the participant reporting the trade event to CAT	R
3	eventTimestamp	Timestamp	The date/time of execution	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C

Option Trade (OT)				
#	Field Name	Data Type	Description	Include Key
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	tradeID	Text (40)	This ID will be used when a specific trade needs to be identified, for example in trade break and correction reports. The combination of date, exchange, optionID, and tradeID must be globally unique	R
7	optionID	Text (40)	The ID of the option being traded	R
8	quantity	Unsigned	Quantity of the trade	R
9	price	Price	Price of the trade	R
10	nbbPrice	Price	The NBBO for this particular option series at the moment the event takes place	R
11	nbbQty	Unsigned		O
12	nboPrice	Price		R
13	nboQty	Unsigned		O
14	saleCondition	Text (8)	Conditions under which trade was executed	C
15	executionCodes	Name / Value Pairs	Adds special exchange specific codes to an execution. Zero or more codes can be entered to provide additional execution information, like where a trade may have been executed on the floor. These codes apply to both sides of the trade	C
16	buyDetails	Side Trade Details	Information for the buy side of the trade. Format and element definitions for Buy Details are described in Side Trade Details in Table 52: Side Trade Details	R
17	sellDetails	Side Trade Details	Information for the sell side of the trade. Format and element definitions for Sell Details are described in Side Trade Details in Table 52: Side Trade Details	R
18	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business</p>	C

Option Trade (OT)				
#	Field Name	Data Type	Description	Include Key
			<p>date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	

### **Side Trade Details**

Each side of a trade contains information pertinent to the order and/or quote that contributed to the trade.

The Side Trade Details captures those data elements.

**Table 52: Side Trade Details**

Side Trade Details				
#	Field Name	Data Type	Description	Include Key
16.n.1 / 17.n.1	side	Choice	The side of the executed trade: See entry for "Side" in the Data Dictionary for acceptable values	R
16.n.2 / 17.n.2	leavesQty	Unsigned	The quantity remaining unfilled after this trade event. Not required when used in a trade correction	C
16.n.3 / 17.n.3	openCloseIndicator	Choice	Indicates the position of the trade, applicable only when this side is an order	C
16.n.4 / 17.n.4	quoteID	Text (40)	The ID of the quote, only applicable only when this side of the execution is a market maker quote	C
16.n.5 / 17.n.5	orderID	Text (40)	The ID of the order, only applicable only when this side of the execution is an order	C
16.n.6 / 17.n.6	executingFirm	Alphanumeric (8)	The OCC number of the executing firm	R
16.n.7 / 17.n.7	floorBroker	Member Alias	The Member Alias of the floor broker handling the trade, if the trade is handled on the floor	C
16.n.8 / 17.n.8	cmtaFirm	Alphanumeric (8)	The OCC number of the CMTA firm (only valid for CMTA trades)	C

Side Trade Details				
#	Field Name	Data Type	Description	Include Key
16.n.9 / 17.n.9	mktMkrSubAccount	Text (20)	The sub-account for the market maker, only valid when Origin Code is Market Maker	C
16.n.10 / 17.n.10	exchOriginCode	Choice	Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values	R
16.n.11 / 17.n.11	liquidityCode	Choice	Specifies if this side of the trade was adding or removing liquidity. See entry for liquidityCode in the Data Dictionary for permitted values	O
16.n.12 / 17.n.12	executionCodes	Name/Value Pairs	Describes any execution codes, as described in Data Dictionary for Execution Codes. These codes would only apply only to this side of the trade	C
16.n.13 / 17.n.13	member	Member Alias	The identifier for the member firm that is responsible for the order	R
16.n.14 / 17.n.14	routedOrderID	Text (40)	For events representing an away trade, the exchange-assigned ID used to route the order away.	O

In some cases, an option trade may occur with neither a quoteID nor an orderID for one or both sides of the trade. In these cases, the quoteID/orderID can be omitted. However, the executionCodes must include NOBUYID and/or NOSELLID as appropriate.

For trades that result from Complex Quote (OCQ) events, the *executionCodes* field must include 'complexOptionID' name/value pair populated with the optionID of the complex option (CODE record) provided on the OCQ event.

Linkage Keys for **OT**:

**Order Key:** date, exchange, optionID, buyDetails.orderID

**Order Key:** date, exchange, optionID, sellDetails.orderID

**Quote Key:** date, exchange, optionID, buyDetails.quoteID

**Quote Key:** date, exchange, optionID, sellDetails.quoteID

**Complex Quote Key:** date, exchange, complexOptionID, buyDetails.quoteID

**Complex Quote Key:** date, exchange, complexOptionID, sellDetails.quoteID

**Route Link Key:** date, symbol, exchange, buyDetails.routedOrderID

**Route Link Key:** date, symbol, exchange, sellDetails.routedOrderID

**Trade Key:** date, exchange, optionID, tradeID

**Exchange/Firm Trade Key:** date, exchange, optionID, MOOTLINK, side

#### 5.2.5.2. Stock Leg Fill Event

When a stock leg executes, it always executes at an away venue, which will report both sides of the trade. The options exchange, while possibly knowing both orders that crossed, did not actually perform the transaction. Thus, all transactions involving stock legs are reported as one-sided pass-along fills of the order, and contain the following data elements.

**Table 53: Stock Leg Fill Event**

Option Stock Leg Fill (OSLF)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OSLF	R
2	exchange	Exchange ID	The ID of the exchange reporting the fill to CAT	R
3	eventTimestamp	Timestamp	The date/time when the fill was processed by the exchange	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	fillID	Text (40)	An identifier for the fill, unique per reporter/trade date. This ID should uniquely identify any fill for the given exchange, date, and symbol	R
7	symbol	Symbol	The symbol of the stock being filled	R
8	quantity	Unsigned	Quantity of the fill	R
9	price	Price	Price of the fill	R
10	saleCondition	Text (8)	Conditions under which trade was executed	C
11	executionCodes	Name / Value Pairs	Adds special exchange specific codes to an execution. Zero or more codes can be entered to	C

Option Stock Leg Fill (OSLF)				
#	Field Name	Data Type	Description	Include Key
			provide additional execution information, like where a trade may have been executed on the floor	
12	side	Choice	The side of the executed trade: See entry for "Side" in the Data Dictionary for acceptable values	R
13	leavesQty	Unsigned	The quantity remaining unfilled after this fill event	R
14	orderID	Text (40)	The ID of the stock leg order	R
15	clearingFirm	Text (10)	The Member Alias of the clearing firm	O
16	clearingNumber	Text (20)	DTCC clearing number for this side of the trade	O
17	member	Member Alias	The identifier for the member firm that is responsible for the order. This is the same member as in the complex order	R
18	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

Linkage Keys for **OSLF**:

**Order Key:** date, exchange, symbol, orderID

**Fill Key:** date, exchange, symbol, fillID

### 5.2.6. Post Trade Allocation Event

In the event of a modified, canceled, or replaced post trade Allocation, only the final allocation should be reported to CAT.

The fields quoteID and orderID must reference the quote/order from the original trade that is being allocated. If the trade has neither a quoteID nor an orderID, then this event will include neither IDs as well (this implies that the executionCodes field from the original trade message contains either NOBUYID or NOSELLID).

**Table 54: Post Trade Allocation Event**

Post Trade Allocation				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OPTA	R
2	exchange	Exchange ID	The ID of the exchange reporting the fill to CAT	R
3	eventTimestamp	Timestamp	The date/time when the allocation happened	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	optionID	Text (40)	The ID of the option being traded	R
7	tradeID	Text (40)	The ID for the trade that is being reallocated. This must match a previously reported trade	R
8	orderID	Text (40)	Order ID being allocated, only applicable when the allocation is related to an order. Both orderID and quoteID cannot be provided.	C
9	quoteID	Text (40)	The ID of the quote, only applicable when the allocation is related to a market maker quote. Both orderID and quoteID cannot be provided.	C
10	quantity	Unsigned	Quantity being allocated	R
11	price	Price	Price of the allocation	R
12	side	Choice	The side of the executed trade: See entry for "Side" in the Data Dictionary for acceptable values	R

Post Trade Allocation				
#	Field Name	Data Type	Description	Include Key
13	receivingFirm	Alphanumeric (8)	The OCC number of the receiving firm	R
14	cmtaFirm	Alphanumeric (8)	The OCC number of the CMTA firm (only valid for CMTA trades)	C
15	openCloseIndicator	Choice	The position of the order: either Open, Close, or Unspecified	O
16	exchOriginCode	Choice	Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values	O
17	mktMkrSubAccount	Text (20)	The sub-account for the market maker, only meaningful if exchOriginCode rolls up to Market Maker	O
18	reason	Text (255)	Free format text fields, describing why allocation was done	O
19	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

Linkage Keys for **OPTA**:

**Order Key:** date, exchange, optionID, orderID

**Quote Key:** date, exchange, optionID, quoteID

**Trade Key:** date, exchange, optionID, tradeID

### 5.3. Option Order Restatement Event

Options orders that persist across business days (e.g., GTC orders) must be restated each day before any other activity is reported for that symbol. The restatement is an explicit confirmation that the order is still active in the reporter's order book, and also provides an opportunity to use per-day unique order IDs for all orders.

The attributes of the order will be restated in terms of the order's current state, after any corporate actions have been processed. Pursuant to each exchange's rule book, some corporate action types dictate that persisted orders will be canceled or converted. If converted, the order restatement field values should reflect the adjusted values on the effective date (e.g., if a 2:1 split occurred, the quantity and price would reflect the resulting change).

The following fields will not be included if restating a complex option order, but are otherwise required: openCloseIndicator, orderType, exchOriginCode, coverage, executingFirm.

**Table 55: Option Order Restatement Event**

Option Order Restatement (OORS)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OORS	R
2	exchange	Exchange ID	The identifier for the exchange which has received this order	R
3	eventTimestamp	Timestamp	The date/time when the order was restated	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	optionID	Text (40)	The ID previously assigned to this option in the reporter's option dictionary	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange	R
8	originalOrderDate	Date	The most recent trading day for which the order was active. Note that this may not be the date when the order was originally accepted. If the order has been active for multiple trading days, this field	R

### Option Order Restatement (OORS)

#	Field Name	Data Type	Description	Include Key
			must reference the previous trading day when the order was active	
9	originalOrderID	Text (40)	The most recent internal order ID that was assigned to the order before the Restatement Event. If the orderID has not changed, then orderID and originalOrderID must be equivalent. Note this requirement is different from modification events	R
10	side	Choice	The side of the order: See entry for "Side" in the Data Dictionary for acceptable values	R
11	price	Price	The limit price of the order, if applicable. Adjusted following corporate action, if applicable	C
12	quantity	Unsigned	The order quantity, as adjusted for a corporate action, if applicable	R
13	displayQty	Unsigned	The display quantity, as adjusted for a corporate action, if applicable	R
14	displayPrice	Price	The displayed price for this order (required if displayQty is greater than zero)	C
15	workingPrice	Price	The working price of the order	C
16	leavesQty	Unsigned	The quantity of the order that remains open, as adjusted for a corporate action, if applicable	C
17	openCloseIndicator	Choice	the position of the order: either Open, Close, or Unspecified	C
18	orderType	Choice	The order type is one of several possible pre-defined order types. There are a few general order type codes, and several codes unique for each exchange. See the corresponding entry in the Data Dictionary for more details about order types	C
19	timeInForce	Choice	The Time-in-Force for the order (e.g., DAY, IOC, GTC). See the Data Dictionary for a complex list of acceptable values	R
20	handlingInstructions	Name / Value Pairs	The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details	C
21	orderAttributes	Name/Value Pairs	Defines reportable attributes of an order, that are not necessarily handling instructions	C
22	exchOriginCode	Choice	Exchange defined code designating the origin of the order, see data dictionary for list of acceptable values	C

Option Order Restatement (OORS)				
#	Field Name	Data Type	Description	Include Key
23	coverage	Choice	Specifies whether the order is covered or uncovered. This field may also be filled in as unspecified. See the data dictionary for a list of acceptable values	C
24	executingFirm	Alphanumeric(8)	The OCC number of the executing/give-up firm	C
25	cmtaFirm	Alphanumeric(8)	The OCC number of the CMTA firm (only valid for CMTA trades)	C
26	member	Member Alias	The identifier for the member firm that is responsible for the order	R
27	mktMkrSubAccount	Text (20)	The sub-account for the market maker, only valid when Origin Code is Market Maker	C
28	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

Linkage Keys for **OORS**:

**Order Key:** date, exchange, optionID, orderID

**Previous Order Key:** originalOrderDate, exchange, optionID, originalOrderID

## 5.4. Option Trade Break Event

When a trade is broken, an event is reported to CAT with the appropriate information. Note that CAT adds the event to the history of the order. The broken trade is not removed from the history, as it is something that actually happened and should be recorded.

**Table 56: Option Trade Break Event**

Option Trade Break (OTB)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OTB	R
2	exchange	Exchange ID	The ID for the exchange on which the trade took place	R
3	eventTimestamp	Timestamp	The date/time of the break event	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	optionID	Text (40)	The ID previously assigned to this option in the reporter's option dictionary	R
7	tradeDate	Date	The date on which the trade being broken occurred	R
8	tradeID	Text (40)	The ID for the trade that is being broken. This must match a previously reported trade	R
9	quantity	Unsigned	If the full quantity is being broken, then this field can be omitted. Otherwise, this represents the quantity of the original trade that is being broken	O
10	reason	Text (255)	Free format text field, with the reason for the break	O
11	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur</p>	C

Option Trade Break (OTB)				
#	Field Name	Data Type	Description	Include Key
			<p>on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	

Linkage Keys for **OTB**:

**Trade Key:** date, exchange, optionID, tradeID

**Previous Trade Key:** date, exchange, optionID, refTradeID

## 5.5. Option Trade Correction Event

If a trade is corrected in any way, a correction event must be reported to CAT with all details of the trade, after having been corrected. This event must capture the entire state of the trade after having been corrected.

As with trade breaks, CAT will still keep the original trade, adding the correction to the audit trail of the trade being corrected.

**Table 57: Option Trade Correction Event**

Option Trade Correction (OTC)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OTC	R
2	exchange	Exchange ID	The ID of the participant reporting the trade event to CAT	R
3	eventTimestamp	Timestamp	The date/time when the trade correction occurred	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C

### Option Trade Correction (OTC)

#	Field Name	Data Type	Description	Include Key
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	tradeID	Text (40)	An identifier for the trade being corrected	R
7	refTradeID	Text (40)	The trade being referenced. Used to link corrections if trade corrections can assign new identifiers to trades. If included, refTradeID must reference a previously reported trade, or a previously reported trade correction that has a matching tradeID	C
8	optionID	Text (40)	The ID of the option being traded	R
9	quantity	Unsigned	Quantity of the trade	R
10	price	Price	Price of the trade	R
11	saleCondition	Text (8)	Conditions under which trade was executed	C
12	executionCodes	Name / Value Pairs	Adds special exchange specific codes to an execution. Zero or more codes can be entered to provide additional execution information, like where a trade may have been executed on the floor. These codes apply to both sides of the trade	C
13	executionTimestamp	Timestamp	The date/time of the execution, applicable only when the execution time was corrected	O
14	reason	Text (255)	Free format text field, describing the reason why the correction was made	O
15	buyDetails	Side Trade Details	Information for the buy side of the trade. Format and element definitions for Buy Details are described in Table 52: Side Trade Details.	O
16	sellDetails	Side Trade Details	Information for the buy side of the trade. Format and element definitions for Sell Details are described in Table 52: Side Trade Details	O
17	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business</p>	C

Option Trade Correction (OTC)				
#	Field Name	Data Type	Description	Include Key
			<p>date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	

Linkage Keys for **OTC**:

**Order Key:** date, exchange, optionID, buyDetails.orderID

**Order Key:** date, exchange, optionID, sellDetails.orderID

**Route Link Key:** date, optionID, exchange, buyDetails.routedOrderID

**Route Link Key:** date, optionID, exchange, sellDetails.routedOrderID

**Quote Key:** date, exchange, optionID, buyDetails.quoteID

**Quote Key:** date, exchange, optionID, sellDetails.quoteID

**Trade Key:** date, exchange, optionID, tradeID

**Trade Key:** date, exchange, optionID, refTradeID

**Previous Trade Key:** date, exchange, optionID, refTradeID

## 5.6. Option Floor Broker Events

The options floor participant event captures instances when an order routed by the matching engine to a floor participant is returned to the matching engine. The floor participant has the option to request the return of the order, or to permanently relinquish the order to the matching engine.

### 5.6.1. Floor Participant Event

**Table 58: Floor Participant**

Floor Participant (OFP)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OFP	R

Floor Participant (OFP)				
#	Field Name	Data Type	Description	Include Key
2	exchange	Exchange ID	The ID for the exchange that reported the event.	R
3	eventTimestamp	Timestamp	The date/time the matching engine was checked.	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps.	R
5	seqNumSub	Text (10)	A sequence number subsystem identifier assigned to the system that rejected the message. Required if different systems that reject messages do not share the same message sequencing process.	C
6	optionID	Text (40)	The ID previously assigned to this option in the reporter's option dictionary.	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange.	R
8	routingParty	Text (8)	The ID string used to identify the floor participant who sent this routed order.	R
9	routedOrderID	Text (40)	The ID assigned to this order when the floor participant submits the order to the exchange.	R
10	routedOriginalOrderID	Text (40)	The routedOrderID for the OFP being modified.	C
11	session	Text (40)	The name of the session used to send the order from the floor participant to the matching engine.	R
12	side	Choice	The side of the order: See entry for "side" in the Data Dictionary for acceptable values.	R
13	price	Price	Limit price for the event, which may be different than the limit price for the order.  Required unless the Order Type precludes a price.	C
14	quantity	Unsigned	Quantity of the event. May be different from both the order qty and the leaves qty for the order.	R
15	displayQty	Unsigned	The displayed quantity for this event	R
16	displayPrice	Price	Display price for the event. This must be provided on simple option orders (i.e. complexOrderID is null) when displayQty is greater than zero.	C
17	workingPrice	Price	Working Price of the event.	C
18	orderType	Choice	See the corresponding entry in the Data Dictionary for more details about order types.  Required if the event has a different orderType	C

### Floor Participant (OFP)

#	Field Name	Data Type	Description	Include Key
			from the order.	
19	timeInForce	Choice	Time-in-Force for the event. See the Data Dictionary for a complete list of acceptable values.	R
20	handlingInstructions	Name / Value Pairs	The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details.  Instructions presented here should include instructions added by the Floor Participant, if any.	C
21	orderAttributes	Name/Value Pairs	Defines reportable attributes of an order that are not necessarily handling instructions.  Attributes presented here should include instructions added by the Floor Participant, if any.	C
22	member	Member Alias	The identifier for the member firm that is responsible for the order	R
23	nbbPrice	Price	NBBO at the moment just before the event is accepted by the matching engine.	R
24	nbbQty	Unsigned		O
25	nboPrice	Price		R
26	nboQty	Unsigned		O
27	complexOrderID	Text (40)	The Order ID for the parent complex order, if this event represents a leg of a complex order. This must be provided if the order represents a leg of a complex order.	C
28	complexOptionID	Text (40)	The optionID for the parent complex order, if this event represents a leg of a complex order. Not reported if the complex order's orderID is globally unique	C
29	cycleDate	Date	Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.  An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business	C

Floor Participant (OFP)				
#	Field Name	Data Type	Description	Include Key
			<p>date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	

Linkage Keys for **OFP**:

- **Order Key:** date, exchange, optionID, orderID
- **Cross Order Key:** date, exchange, optionID, orderID, pairedOrderID (if populated in order attributes name value pair)
- **Route Link Key:** date, optionID, routingParty, routedOrderID, session, exchange
- **Complex Order Key:** date, exchange, [complexOptionID,] complexOrderID

#### 5.6.2.Complex Floor Participant Event

**Table 59: Complex Floor Participant Event**

Complex Floor Participant (OCFP)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	OCFP	R
2	exchange	Exchange ID	The ID for the exchange.	R
3	eventTimestamp	Timestamp	The date/time the matching engine was checked.	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps.	R
5	seqNumSub	Text (10)	A sequence number subsystem identifier assigned to the system that rejected the message. Required if different systems that reject messages do not share the same message sequencing process.	C
6	optionID	Text (40)	The ID previously assigned to this option in the reporter's option dictionary	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange.	R
8	routingParty	Text (8)	The ID string used to identify the entity or individual who sent this routed order.	R

### Complex Floor Participant (OCFP)

#	Field Name	Data Type	Description	Include Key
9	routedOrderID	Text (40)	The ID assigned to this order by the routing firm when submitting the order to the exchange	R
10	routedOriginalOrderID	Text (40)	The routed ID for the OCFB being modified.	C
11	session	Text (40)	The name of the session used to send the order from the floor participant to the exchange.	R
12	side	Choice	The side of the order, for a complex order the values for side can be either "AsDirected" or "Opposite", see entry for "Side" in the Data Dictionary for acceptable values.	R
13	price	Price	The net price of the order, which may be negative.	C
14	quantity	Unsigned	Quantity of the event.	R
15	timeInForce	Choice	Time-in-Force for the event. See the Data Dictionary for a complete list of acceptable values.	R
16	handlingInstructions	Name / Value Pairs	<p>The handling instructions field contains one or more instruction codes from the pre-defined list of order handling instructions. See the documentation in the Data Dictionary for more details.</p> <p>Instructions presented here should include instructions added by the Floor Participant, if any.</p>	C
17	orderAttributes	Name/Value Pairs	<p>Defines reportable attributes of an order that are not necessarily handling instructions.</p> <p>Attributes presented here should include instructions added by the Floor Participant, if any.</p>	C
18	member	Member Alias	The identifier for the member firm that is responsible for the order	R
19	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the</p>	C

Complex Floor Participant (OCFP)				
#	Field Name	Data Type	Description	Include Key
			<p>Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	

Linkage Keys for **OCFP**:

- **Order Key:** date, exchange, optionID, orderID
- **Cross Order Key:** date, exchange, optionID, orderID, pairedOrderID (if populated in order attributes name value pair)
- **Route Link Key:** date, optionID, routingParty, routedOrderID, session, exchange
- **Complex Order Key:** date, exchange, [complexOptionID,] complexOrderID

### 5.6.3.Return to Floor Participant Event

**Table 60: Return to Floor Participant**

Return to Floor Participant (ORFP)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	ORFP	R
2	exchange	Exchange ID	The ID for the exchange.	R
3	eventTimestamp	Timestamp	The date/time the matching engine was checked.	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps.	R
5	seqNumSub	Text (10)	A sequence number subsystem identifier assigned to the system that rejected the message. Required if different systems that reject messages do not share the same message sequencing process.	C
6	optionID	Text (40)	The ID previously assigned to this option in the reporter's option dictionary	R
7	orderID	Text (40)	The internal order ID assigned to the order by the exchange. If a leg is being canceled, the orderID will represent the leg order being canceled	R
8	cancelQty	Unsigned	The quantity being canceled	R

Return to Floor Participant (ORFP)				
#	Field Name	Data Type	Description	Include Key
9	leavesQty	Unsigned	The quantity left open after the cancel event (zero for a full cancel)	R
10	initiator	Choice	Indicates who initiated the order cancellation: See entry for "initiator" in the Data Dictionary for acceptable values	R
11	cancelReason	Choice	Code representing the reason why the order was returned to the Floor Participant. The actual value of the code is exchange specific. See Data Dictionary for the list of allowed values	O
12	member	Member Alias	The identifier for the member firm that is responsible for the order	R
13	cycleDate	Date	<p>Set equal to the US business date upon which the daily trading cycle of an event ends. A trading cycle may include more than one trading session. In global trading scenarios, the trading cycle of an order may span multiple dates due to the CAT requirement for representing all event timestamps in Eastern Time as well as the occurrence of US Holidays.</p> <p>An event that occurs on a Global Market where the Eastern Time equivalent is a non-US business date including a holiday or weekend must set the Cycle Date equal to the next US business date. And an event that occurs on a Global Market where the Eastern Time equivalent is a US business date (T) where subsequent events for that event may occur on the next Eastern Time equivalent US business date (T+1) must set the Cycle Date equal to T+1.</p> <p>The Cycle Date must be populated for all orders in an options series for which the trading cycle begin date is prior to the trading cycle end date. The Cycle Date must be between the Event Date and T+1, inclusive. (Where T+1 means Trade Date plus the next Trade Date.)</p>	C

Linkage Keys for **ORFP**:

- **Order Key:** date, exchange, optionID, orderID

## 5.7. Lifecycle Keys

The lifecycle keys for each event are summarized in the following table. The date component of each Lifecycle Key is typically derived from the event timestamp. However, when a cycle date is provided, it will be used as the date component of the Lifecycle Key, allowing events that occur on different calendar dates, but within the same cycle date, to be properly linked.

**Table 61: Section 5 Lifecycle Keys**

Section	Event	Lifecycle Keys
5.1.1	Quote	<b>Quote Key:</b> date, exchange, optionID, quoteID <b>Previous Quote Key:</b> date, exchange, optionID, originalQuoteID
5.1.2	Complex Quote	<b>Complex Quote Key:</b> date, exchange, optionID, quoteID <b>Previous Complex Quote Key:</b> date, exchange, optionID, originalQuoteID
5.1.3	Quote Cancel	<b>Quote Key:</b> date, exchange, optionID, quoteID
5.2.1.1	Simple Option Order Accepted	<b>Order Key:</b> date, exchange, optionID, orderID <b>Cross Order Key:</b> date, exchange, orderID, pairedOrderID (if populated in order attributes name value pair) <b>Route Link Key:</b> date, optionID, routingParty, routedOrderID, session, exchange <b>Complex Order Key:</b> date, exchange, [complexOptionID,] complexOrderID
5.2.1.2	Complex Option Order Accepted	<b>Order Key:</b> date, exchange, [optionID,] orderID <b>Cross Order Key:</b> date, exchange, [optionID,] orderID, pairedOrderID (if populated in order attributes name value pair) <b>Route Link Key:</b> date, optionID, routingParty, routedOrderID, session, exchange
5.2.1.3	Stock Leg Order	<b>Order Key:</b> date, exchange, symbol, orderID <b>Complex Order Key:</b> date, exchange, [complexOptionID,] complexOrderID
5.2.2.1	Option Order Modified	<b>Order Key:</b> date, exchange, optionID, orderID <b>Cross Order Key:</b> date, exchange, orderID, pairedOrderID (if populated in order attributes name value pair) <b>Previous Order Key:</b> date, exchange, optionID, originalOrderID <b>Complex Order Key:</b> date, exchange, [complexOptionID,] complexOrderID <b>Route Link Key:</b> date, optionID, routedOrderID, exchange, routingParty, session
5.2.2.2	Complex Option Order Modified	<b>Order Key:</b> date, exchange, optionID, orderID <b>Cross Order Key:</b> date, exchange, optionID, orderID, pairedOrderID (if populated in order attributes name value pair) <b>Previous Order Key:</b> date, exchange, optionID, originalOrderID <b>Route Link Key:</b> date, optionID, routedOrderID, exchange, routingParty, session
5.2.2.3	Stock Leg Modified	<b>Order Key:</b> date, exchange, symbol, orderID <b>Previous Order Key:</b> date, exchange, symbol, originalOrderID <b>Complex Order Key:</b> date, exchange, [complexOptionID,] complexOrderID
5.2.2.4	Option Order Adjusted	<b>Order Key:</b> date, exchange, optionID, orderID <b>Cross Order Key:</b> date, exchange, optionID, orderID, pairedOrderID (if

6.2.2	Complex Floor Participant	<p><b>Order Key:</b> date, exchange, optionID, orderID</p> <p><b>Cross Order Key:</b> date, exchange, optionID, orderID, pairedOrderID (if populated in order attributes name value pair)</p> <p><b>Route Link Key:</b> date, optionID, routingParty, routedOrderID, session, exchange</p> <p><b>Complex Order Key:</b> date, exchange, [complexOptionID,] complexOrderID</p>
6.2.3	Return to Floor Participant	<p><b>Order Key:</b> date, exchange, optionID, orderID</p>

## 6. FINRA Reporting

### 6.1. TRF/ORF/ADF Transaction Data Event

Transactions in Eligible Securities reported to a FINRA trade reporting facility must be reported to CAT by FINRA.

**Table 62: FINRA TRF/ORF ADF Transaction Data Event**

FINRA TRF/ORF/ADF Transaction Data Event (TRF)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	TRF	R
2	actionType	Choice	Indicates if this is a new event, a FINRA-initiated correction, or a firm-initiated correction. <b>This is a pass-through value and is not used for FINRA CAT processing. Any correction event must be submitted using the standard correction process.</b> See Data Dictionary: <code>actionType</code>	R
3	tradeReportDate	Date	Date the trade report was received by the reporting facility.	R
4	tradeReportTimestamp	Timestamp	Date and time the trade report was received by the reporting facility.	R
5	executionDate	Date	Date the execution occurred.	R
6	executionTimestamp	Timestamp	Date and time the execution occurred.	R
7	contraReportDate	Date	Date the contra party reported the trade.	C
8	contraReportTime	Time	Time the contra party reported the trade.	O
9	contraReportTimestamp	Timestamp	Date and time the contra party reported the trade.	C
10	contraExecutionTimestamp	Timestamp	Date and time the contra party reported that the execution took place.	C
11	assumedExecutionTimestamp	Timestamp	Date and time the trade is assumed to have been executed based on available information.	R
12	acceptTime	Time	Time the trade was accepted by the contra party.	O

**FINRA TRF/ORF/ADF Transaction Data Event (TRF)**

#	Field Name	Data Type	Description	Include Key
13	acceptTimestamp	Timestamp	Date and time the trade was accepted by the contra party.	C
14	declineTime	Time	Time the trade was declined by the contra party.	O
15	declineTimestamp	Timestamp	Date and time the trade was declined by the contra party.	C
16	cancellationTimestamp	Timestamp	Date and time the reporting party cancelled the trade.	C
17	lockedInTradeTimestamp	Timestamp	Date and time the locked-in trade report was received by the reporting facility.	C
18	tradeBreakTimestamp	Timestamp	Date and time the reporting party submitted their break request.	C
19	tradeBrokenTimestamp	Timestamp	Date and time the contra party submitted their break confirmation.	C
20	tradeSettlementDate	Date	Date on which the trade will settle.	C
21	issueSymbolId	Symbol	Character symbol of the traded issue.	R
22	marketCenterId	Choice	Reporting facility to which the trade was reported. See Data Dictionary: <code>marketCenterId</code>	R
23	relatedMarketCenterId	Choice	For the non-tape "riskless" leg of a riskless principal transaction, the facility or market where the first leg of the transaction was reported. See Data Dictionary: <code>relatedMarketCenterId</code>	C
24	reportedSideCode	Choice	Side of the trade (buy/sell/cross) from the perspective of the firm with the reporting obligation. See Data Dictionary: <code>reportedSideCode</code>	R
25	reportingSideMpid	Member Alias	MPID of the firm with the reporting obligation.	R
26	reportingExecutingMpid	Member Alias	MPID of the executing party.	R
27	contraSideReportingMpid	Member Alias	MPID of the contra-side firm that reported the trade.	C
28	contraExecutingMpid	Member Alias	MPID of the contra-side executing party.	C

**FINRA TRF/ORF/ADF Transaction Data Event (TRF)**

#	Field Name	Data Type	Description	Include Key
29	reportingSideClearingNumber	Unsigned	Clearing number of the firm that cleared the trade for the reporting-side firm.	R
30	reportingSideBranchSequenceIdentifier	Text (20)	Branch/sequence number of the reporting-side firm.	C
31	reportingSideCapacityCode	Choice	Capacity of the reporting-side firm.  See Data Dictionary: reportingSideCapacityCode	C
32	reportingSideShortSaleCode	Choice	Identifies a short sale by the executing firm and indicates the type of short.  See Data Dictionary: reportingSideShortSaleCode	C
33	contraSideClearingNumber	Unsigned	Clearing number of the firm that cleared the trade for the contra-side firm.	C
34	contraSideBranchSequenceIdentifier	Text (20)	Branch/sequence number of the contra-side firm.	C
35	contraSideCapacityCode	Choice	Capacity of the contra-side firm.  See Data Dictionary: contraSideCapacityCode	C
36	contraSideShortSaleCode	Choice	Identifies a short sale by the contra firm and indicates the type of short.  See Data Dictionary: contraSideShortSaleCode	C
37	executionQuantity	Unsigned	Number of shares traded.	R
38	executionPrice	Price	Unit price of the trade.	R
39	reportedShareQuantity	Unsigned	Number of shares traded as reported to the SIP.	C
40	reportedUnitPrice	Price	Unit price of the trade as reported to the SIP.	C
41	clearingPrice	Price	Trade price inclusive of commissions. This information is only currently available for reported trades to the Nasdaq TRF.	C
42	publishIndicatorCode	Choice	Identifies if the trade is media reportable or not (could differ from the mediaReportedFlag for odd lot trades).  See Data Dictionary: publishIndicatorCode	R

**FINRA TRF/ORF/ADF Transaction Data Event (TRF)**

#	Field Name	Data Type	Description	Include Key
43	mediaReportedFlag	Choice	Identifies if the trade was media reported or not (could differ from the publishIndicatorCode for odd lot trades).  See Data Dictionary: <code>mediaReportedFlag</code>	R
44	tradeStatusCode	Choice	Final status of the trade at the time it was reported.  See Data Dictionary: <code>tradeStatusCode</code>	C
45	tradeSettlementModifier	Choice	Identifies a Reg NMS Settlement Type Sale Condition Code associated with a trade transaction.  See Data Dictionary: <code>tradeSettlementModifier</code>	C
46	tradeThroughExemptionModifier	Choice	Further classification of the trade with regard to Trade Through Exemption. This is entered by the firm when it reports the trade.  See Data Dictionary: <code>tradeThroughExemptionModifier</code>	C
47	tradeReportingModifier	Choice	Further classification of the trade with regard to Extended Hours/Sequence. This can either be entered by the firm or appended by the system.  See Data Dictionary: <code>tradeReportingModifier</code>	C
48	sroRequiredModifier	Choice	Further classification of the trade with regard to SRO required detail. This can either be entered by the firm or appended by the system.  See Data Dictionary: <code>sroRequiredModifier</code>	C
49	systemAppendedTradeReportingModifierFlag	Choice	Identifies if the Trade Reporting Modifier Code was entered by the reporting firm or appended by the reporting facility.  See Data Dictionary: <code>systemAppendedTradeReportingModifierFlag</code>	R
50	originalModifierCode	Text (4)	Four-byte trade modifier as entered by the firm.	C
51	reversalFlag	Choice	Indicates that the trade report is reversal transaction.  See Data Dictionary: <code>reversalFlag</code>	R

**FINRA TRF/ORF/ADF Transaction Data Event (TRF)**

#	Field Name	Data Type	Description	Include Key
52	carryoverFlag	Choice	Indicates that the trade transaction was carried over (not accepted/declined by the contra firm on T+0) for processing.  See Data Dictionary: <code>carryoverFlag</code>	C
53	tradeThroughExemptFlag	Choice	Indicates that the trade is trade through exempt.  See Data Dictionary: <code>tradeThroughExemptFlag</code>	C
54	contraEntryFlag	Choice	Indicates that the contra party is the only side that reported the trade.  See Data Dictionary: <code>contraEntryFlag</code>	C
55	explicitFeeFlag	Choice	Indicates if a Clearing Price was entered.  See Data Dictionary: <code>explicitFeeFlag</code>	C
56	clearingFlag	Choice	Clearing and matching specifications of the trade transaction.  See Data Dictionary: <code>clearingFlag</code>	R
57	specialTradeCode	Choice	Identifies special and step-out trades.  See Data Dictionary: <code>specialTradeCode</code>	C
58	supervisoryEntryCode	Choice	Indicates if a Market Operations Supervisor entered the trade message on behalf of the reporting side of the trade transaction.  See Data Dictionary: <code>supervisoryEntryCode</code>	C
59	controlNumber	Text (30)	Unique identifier for the reporting side of each trade transaction.	R
60	reportingSideMemoText	Text (30)	Provides a link (via Control Number) to the original trade report, when a subsequent report is submitted to reallocate some of the trade volume to a different capacity. This is a free-form text field; participants can enter any information in this field.	C
61	tradeSourceCode	Choice	Trade Sources.  See Data Dictionary: <code>tradeSourceCode</code>	R
62	contraControlNumber	Text (30)	Control Number for the contra party.	C
63	OEMemoTx	Text (10)	Memo text entered by firm.	C
64	reportTypeCode	Choice	Identifies whether this is a No/Was report.	C

**FINRA TRF/ORF/ADF Transaction Data Event (TRF)**

#	Field Name	Data Type	Description	Include Key
			See Data Dictionary: <code>reportTypeCode</code>	
65	<code>noWasLinkNumber</code>	Text (30)	Link to first No transaction.	C
66	<code>intendedMarketCenter</code>	Choice	Intended Market Center.  See Data Dictionary: <code>intendedMarketCenter</code>	C
67	<code>tradeReferenceNumber</code>	Text (20)	Trade Reference Number	C
68	<code>priceOverrideCode</code>	Choice	Identifies if a price validation test was overridden when the trade was entered into ACT. (When trades are entered into ACT, they are validated for reasonableness against a Price Validation Table. The Price Override widens the validation range).  See Data Dictionary: <code>priceOverrideCode</code>	C
69	<code>asOfFlag</code>	Choice	Indicates as-of trade.  See Data Dictionary: <code>asOfFlag</code>	R
70	<code>lastUpdateDate</code>	Date	Date the record was last updated.	R
71	<code>lastUpdateTime</code>	Timestamp	Date and time the record was last updated.	C
72	<code>lockedInFlag</code>	Choice	Locked-in flag.  See Data Dictionary: <code>lockedInFlag</code>	C
73	<code>noLinkControlNumber</code>	Text (30)	Provides a link (via Control Number) to previous No transaction.	C
74	<code>firmTradeModifierSettlementTypeCode</code>	Choice	User Trade Modifier - Settlement Type (Settlement modifiers).  See Data Dictionary: <code>firmTradeModifierSettlementTypeCode</code>	C
75	<code>firmTradeModifierThroughExemptCode</code>	Choice	Further classification of the trade with regard to Trade Through Exemption. This is entered by the firm when it reports the trade.  See Data Dictionary: <code>firmTradeModifierThroughExemptCode</code>	C
76	<code>firmTradeModifierLateCode</code>	Choice	System Trade Modifier - Time Modifiers (TradeModifier 3 in the FIX Spec).  See Data Dictionary: <code>firmTradeModifierLateCode</code>	C
77	<code>finraTradeModifierSroCod</code>	Choice	System Trade Modifier SRO - Updated by	C

**FINRA TRF/ORF/ADF Transaction Data Event (TRF)**

#	Field Name	Data Type	Description	Include Key
	e		MPP System. See Data Dictionary: finraTradeModifierSroCode	
78	trfTradeModifierSroCode	Choice	User Trade Modifier - SRO - Updated by TRF.  SRO detail sale condition. Required indicator if a trade falls under one of the following transaction types (otherwise the field must not be set).  See Data Dictionary: trfTradeModifierSroCode	C
79	trfTradeModifierLateCode	Choice	System Trade Modifier - Time Modifiers - Updated by TRF.  See Data Dictionary: trfTradeModifierLateCode	C
80	finraTradeModifierLateCode	Choice	System Trade Modifier - Time Modifier - Updated by MPP Engine.  See Data Dictionary: finraTradeModifierLateCode	C
81	reportingObligationFlag	Choice	Identifies if the reporting-side firm had the reporting obligation for the trade under FINRA trade reporting rules.  See Data Dictionary: reportingObligationFlag	C
82	tradeCorrectionClassCode	Choice	Trade Correction Classification.  See Data Dictionary: tradeCorrectionClassCode	C
83	contraReportingObligationFlag	Choice	Identifies if the contra-side firm had the reporting obligation for the trade under FINRA trade reporting rules.  See Data Dictionary: contraReportingObligationFlag	C
84	finraContraControlDate	Date	Control Date corresponding to FINRA Contra Control Number.	C
85	finraContraControlNumber	Text (30)	Control Number used for interaction between TRFs and FINRA; populated only when trade is matched by comparison. Will be unique for a trade report date and market center.	C
86	finraControlDate	Date	Control Date of the current version of the trade.	R

**FINRA TRF/ORF/ADF Transaction Data Event (TRF)**

#	Field Name	Data Type	Description	Include Key
87	finraControlNumber	Text (30)	Control Number of the current version of the trade.	R
88	firstTradeFinraControlDate	Date	Control Date of the first version of the trade.	R
89	firstTradeFinraControlNumber	Text (30)	Control Number of the first version of the trade.	R
90	previousTradeFinraControlDate	Date	FINRA Control Date of the previous version of the trade.	C
91	previousTradeFinraControlNumber	Text (30)	FINRA Control Number of the previous version of the trade.	C
92	positionTransferFlag	Choice	Special processing flag indicating that the transaction is for internal FINRA use only and should not be disseminated.  See Data Dictionary: positionTransferFlag	C
93	trfContraControlNumber	Text (30)	Control Number used for interaction between TRFs and Firms; populated only when trade is matched by comparison. May not be unique for a given day.	C
94	trfControlNumber	Text (30)	Control Number used for interaction between Firms and TRFs. May not be unique for a given day.	C
95	referenceNumber	Text (20)	User-defined trade reference number.	C
96	firmTradeModifierSroCode	Choice	Further classification of the trade with regard to SRO required detail. This can either be entered by the firm or appended by the system.  See Data Dictionary: firmTradeModifierSroCode	C
97	finraTradeModifierThroughExemptTime	Time	System Trade Thru Exempt Modifier Date and Time.	C
98	tradeModifierThroughExemptTime	Time	User Trade Thru Exempt Modifier Time.	O
99	tradeModifierSroTime	Time	Time associated with Prior Reference Price or Stopped Stock trade.	O
100	referenceReportingFacility	Text (6)	Reference Reporting Facility.	C
101	trfProcessingDate	Date	Date FINRA received the record from the	R

**FINRA TRF/ORF/ADF Transaction Data Event (TRF)**

#	Field Name	Data Type	Description	Include Key
			reporting facility.	
102	recordUniqueIdentifier	Text (31)	FINRA-assigned unique identifier for each Reported Trade record.	R
103	recordLoadDate	Date	Date the record was created.	R
104	firstTradeFinraContraControlDate	Date	Control Date of the first trade in a chain of corrections on the contra side trade report.	C
105	firstTradeFinraContraControlNumber	Text (30)	Control Number of the first trade in a chain of corrections on the contra side trade report.	C
106	previousTradeFinraContraControlDate	Date	Control Date of the previous trade in a chain of corrections on the contra side trade report.	C
107	previousTradeFinraContraControlNumber	Text (30)	Control Number of the previous trade in a chain of corrections on the contra side trade report.	C
108	firmOriginalTrfControlNumber	Text (30)	Original Control Number provided by the TRF to the firm.	C
109	reportingSubmittingEntityId	Text (4)	Indicates the entity that initiated the submission. For a FINRA-initiated submission on behalf of the firm, this will be 'FNRA'. Otherwise, for a firm-initiated submission, it will be the firm MPID.  For NC TRF, NQ TRF and NY TRF, this is always NQTC, NQTR or NYTR.  For ADF and ORF it is the MPID of the submitting firm.	R
110	contraSubmittingEntityId	Text (4)	Indicates the entity that initiated the submission. For a FINRA-initiated submission on behalf of the firm, this will be 'FNRA'. Otherwise, for a firm-initiated submission, it will be the firm MPID.  For NC TRF, NQ TRF and NY TRF, this is always NQTC, NQTR or NYTR.  For ADF and ORF it is the MPID of the submitting firm.	C
111	executionQuantityFractional	Real Quantity	Fractional number of shares traded.	R
112	reportedShareQuantityFractional	Real Quantity	Fractional number of shares traded as reported to the SIP	C

## 6.2. OTC Halt/Resume Data

FINRA will report OTC Halt/Resume data to FINRA CAT with the following fields:

**Table 63: FINRA Halt/Resume**

FINRA Halt/Resume (FHR)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	FHR	R
2	tradeDate	Date	Date on which message was disseminated; derived from the date portion of the <code>messageTimestamp</code> .	R
3	1 messageCategory	Choice	This field, along with the <code>haltMessageType</code> , identifies the message format. See Data Dictionary: <code>messageCategory</code>	R
4	haltMessageType	Choice	This field, along with the <code>messageCategory</code> , identifies the message format. See Data Dictionary: <code>haltMessageType</code>	R
5	sessionIdentifier	Choice	Indicates the market session of the message. See Data Dictionary: <code>sessionIdentifier</code>	R
6	retransmissionRequester	Text (2)	Indicates if the message is an original transmission or retransmission. If the message is a retransmission, this field indicates the two-character retransmission identifier of the intended data recipient. Values may include:  <b>O (space)</b> An original transmission to all recipients <b>R (space)</b> A retransmission to all recipients <b>T (space)</b> A test cycle transmission to all recipients <b>Specific Vendor ID</b> Two-character value to be assigned on vendor-by-vendor basis. Contact FINRA for additional information.  Note: Because the value could be any two-character value, this field will not be validated against a list of allowable values. Additionally, FINRA CAT will strip all leading and trailing spaces when storing the input data.	R
7	messageSequenceNumber	Unsigned	At the beginning of each operational cycle, this number will be set to '00000000' (for the Start of Day) for each data channel.	R
8	marketCenterOriginatorID	Choice	Market center or system that originated the action.	R

FINRA Halt/Resume (FHR)				
#	Field Name	Data Type	Description	Include Key
			See Data Dictionary: <code>marketCenterOriginatorID</code>	
9	messageTimestamp	Timestamp	The date and time of the action (Halt, Quote Resume or Trade Resume). When the event is for a Halt, this will be the same as the haltActionTimestamp.	R
10	symbol	Symbol	Symbol of the issue being halted/resumed.	C
11	issueID	Integer	FINRA-assigned issue ID of the issue being halted/resumed.	C
12	haltActionCode	Choice	The type of action (i.e. halt, quote resume, trade resume). See Data Dictionary: <code>haltActionCode</code>	R
13	haltActionTimestamp	Timestamp	The date/time the halt was initiated.	R
14	haltReasonCode	Choice	The reason the security is being halted/resumed. See Data Dictionary: <code>haltReasonCode</code>	C

### 6.3. Equity Best Bid and Offer Event

When an SRO display-only facility accepts a routed quote, an Equity Best Bid and Offer event is reported to CAT. If the quote is rejected, then the event is not reported to CAT.

**Table 64: Equity Best Bid and Offer Event**

Equity Best Bid and Offer (EBBO)				
#	Field Name	Data Type	Description	Include Key
1	type	Message Type	EBBO	R
2	marketCenterId	Exchange ID	Display-Only Facility on which the quote was displayed. See Data Dictionary: <code>marketCenterId</code>	R
3	eventTimestamp	Timestamp	The date/time of quote receipt	R
4	sequenceNumber	Unsigned	The sequence number of the event, used to identify the sequence of events when multiple events have the same timestamps	C

### Equity Best Bid and Offer (EBBO)

#	Field Name	Data Type	Description	Include Key
5	seqNumSub	Text (10)	A sequence number subsystem identifier	C
6	symbol	Symbol	The stock symbol, in either the symbology of the listing exchange or a valid alias	R
7	routingParty	Text (8)	The ID string used to identify the entity that routed the quote to the display-only facility	R
8	routedOrderID	Text (40)	The quote ID that the firm used in the API message when they sent the quote to the display only facility (e.g., in FIX it would be Tag 117, quoteID)	R
9	session	Text (40)	The ID assigned to the specific session that the routing member used to route the order to the exchange	R
10	lockedCrossedOverrideFlag	Boolean	Identifies whether a quote should be considered valid even if it will lock or cross the market.  'True' indicates that the quote is still valid  'False' indicates that the quote is not valid if it locks or crosses.  If no value is provided, it's assumed to be false. Value provided by the submitting firm should be passed through.	C
11	bidPrice	Price	Price for the bid. Must be provided when the bidQty is provided.  If the bidPrice is not provided, then the bidQty must not be provided.  NOTE: in the absence of a bidPrice the most recently reported bidPrice remains in effect.	C
12	bidQty	Unsigned	Quantity of the bid in shares. Must be provided when the bidPrice is provided.  If the bidQty is not provided, then the bidPrice must not be provided.  NOTE: in the absence of a bidQty the most recently reported bidQty remains in effect.	C
13	askPrice	Price	Price for the ask. Must be provided when the askQty is provided.  If the askPrice is not provided, then the askQty must not be provided.  NOTE: in the absence of a askPrice the most recently reported askPrice remains in effect.	C

Equity Best Bid and Offer (EBBO)				
#	Field Name	Data Type	Description	Include Key
14	askQty	Unsigned	Quantity of the ask in shares. Must be provided when the askPrice is provided.  If the askQty is not provided, then the askPrice must not be provided.  NOTE: in the absence of a askQty the most recently reported askQty remains in effect.	C
15	quoteCondition	Text(8)	Indicator used to determine whether a quote is eligible to participate in the NBBO.  Value provided by the submitting firm should be passed through.	C
16	quoteInstructions	Name/Value Pairs	Defines any additional instructions or attributes for the quote, as described in the Data Dictionary	C
17	quoteID	Text (40)	The internal order ID assigned to the quote by the Participant.  If no internal identifier is assigned, then: <ul style="list-style-type: none"> <li>The routedOrderID value can be repeated, provided it is unique by date, symbol and Participant.</li> <li>If no unique internal identifier is created, then this field can be left empty.</li> </ul>	C

Lifecycle keys for this event:

- **Route Link Key:** *date, symbol, routingParty, routedOrderID, session, exchange*

Currently the only SRO display-only facility is the FINRA ADF, which does not assign or maintain an quote identifier. Since top of book quotations cannot be canceled, cancel/replaced or executed, no quote link key will be assigned. Each quotation can be tracked by its route link key.

## 7. Stock Exchange Event Examples

### 7.1. Order Accepted Event Example

This section will illustrate examples for an order accepted event, an order modified event, and an order canceled event using the following scenario: A new order is routed to the exchange, accepted by the exchange, updated by the firm that sent the order, and is finally canceled by the exchange.

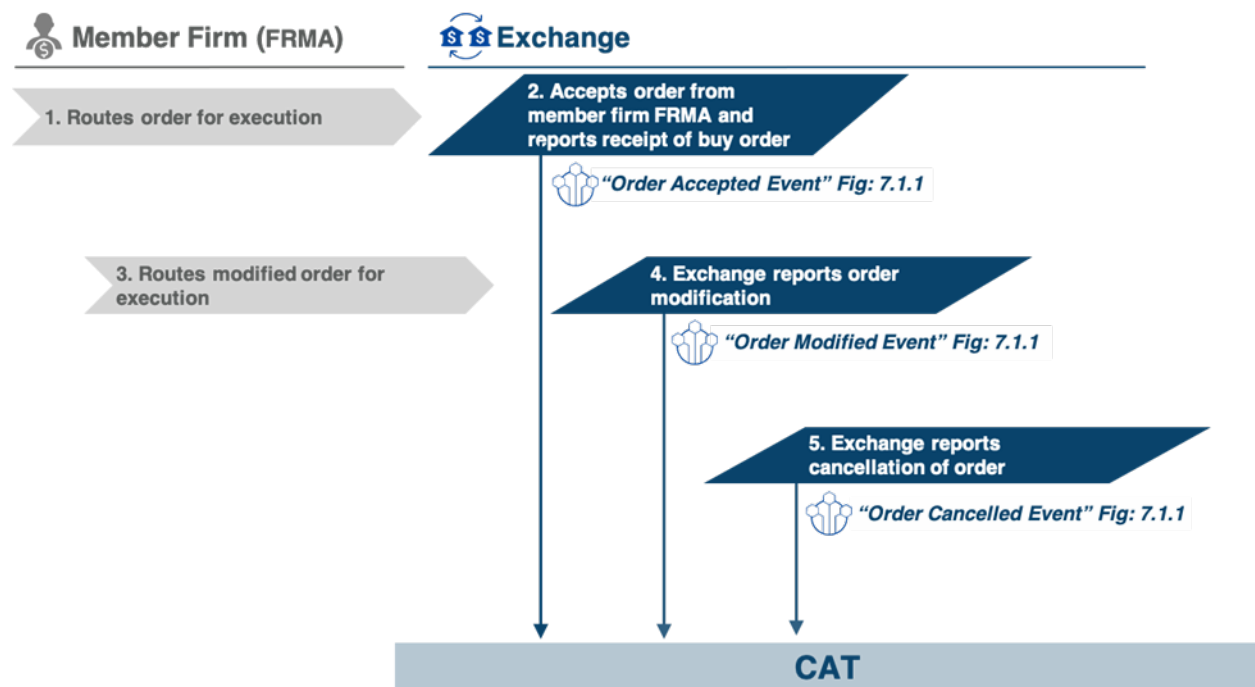

Figure 4: Order Event Lifecycle Example

Table 65: Order Event Lifecycle Example

#	Step	Reported Event	Comments
1	Member Firm Routes order for Execution	NA	<ul style="list-style-type: none"> <li>A member firm routes an order to Exchange "Exch1" over session ID 7 with the order ID of 2156. This order is a buy order for the symbol ABCD, with a quantity of 300</li> </ul>

## 7.2. Order Trade Event Example

This section will demonstrate a trade event example that occurs after a buy and sell order are matched. In this case, a sell order is accepted for a price of 157.20 and quantity of 100. A buy order is then accepted for a price of 157.20 and quantity of 100. The two orders are matched and a trade event is reported.

In this scenario, the exchange is required to report the following events to CAT:

1. Order Accepted Events from each of the orders; and
2. Order Trade Event

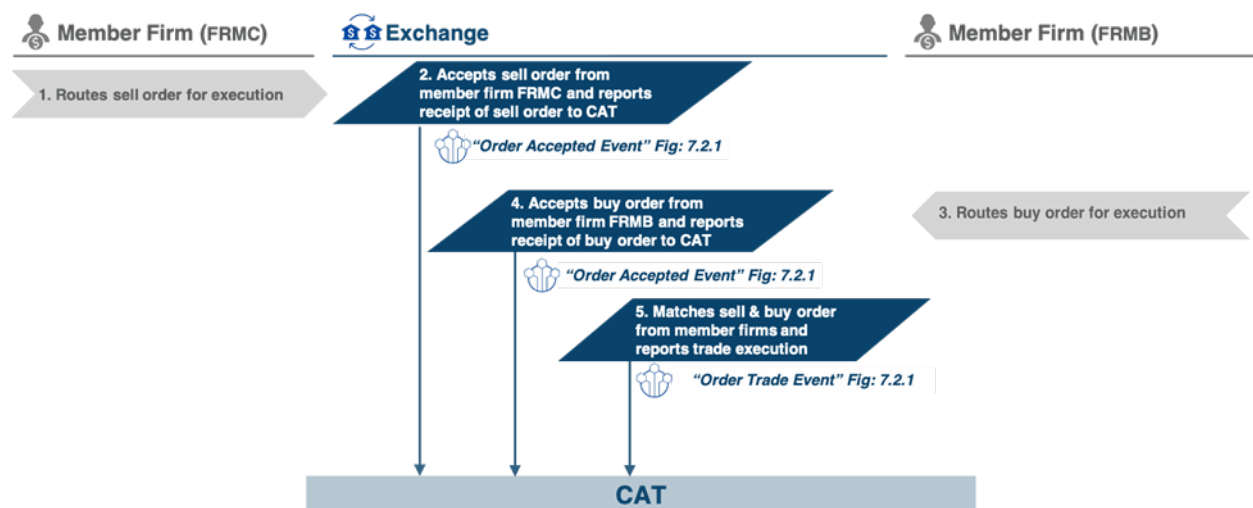

Figure 5: Order Trade Event Example

### 7.3. Order Route and Order Fill Event Example

This scenario illustrates the reporting requirements to CAT when an exchange routes an order to a routing broker-dealer for execution on an away exchange, and Exchange 1's subsequent reporting obligation on fills of the routed order.

In this scenario Exchange 1 receives and reports acceptance of an order, then routes the order to their routing broker dealer for execution on an away exchange. When an execution occurs on the away exchange, the routing broker reports the fill back to Exchange 1. The following events are reported:

1. Order Accepted Event of the original order,
2. The Order Route Event, and

### 3. The Order Fill Event.

Figure 6: Order Route and Order Fill Event Example

Table 67: Order Route and Order Fill Event Example

## 7.5. Order Modified Example

This section will show how an order modified event is reported when the order type is changed by the initiating member firm from a limit order to a market order. This series of events will follow the submission of a limit order from a member firm to the exchange that is subsequently modified by the member firm.

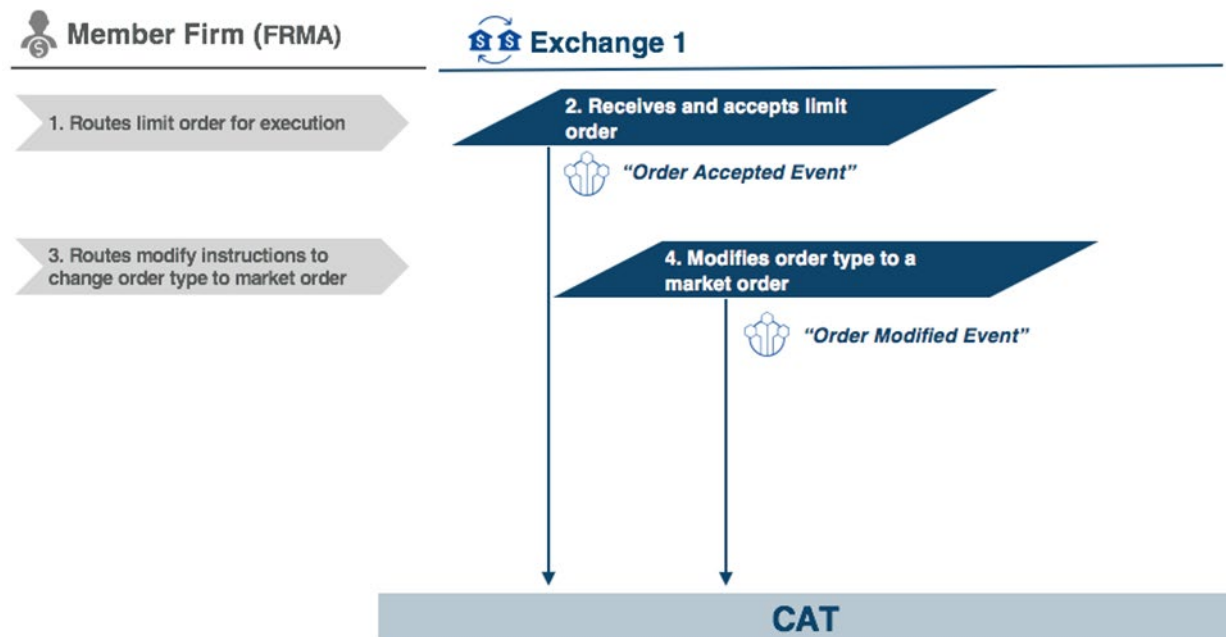

Figure 8: Order Modified Example

Table 69: Order Modified Example

## 7.6. Order Modified for because of Partial Fill at Away Exchange

This Example is for an Equity Order Modify event where the exchange routes the order to an away exchange with a better market, and partially executes. The Order Modified Event is for the liquidity returned to the exchange after a partial execution. This example is to show how to populate the routedOrderId in the Equity Order Modified event for this scenario.

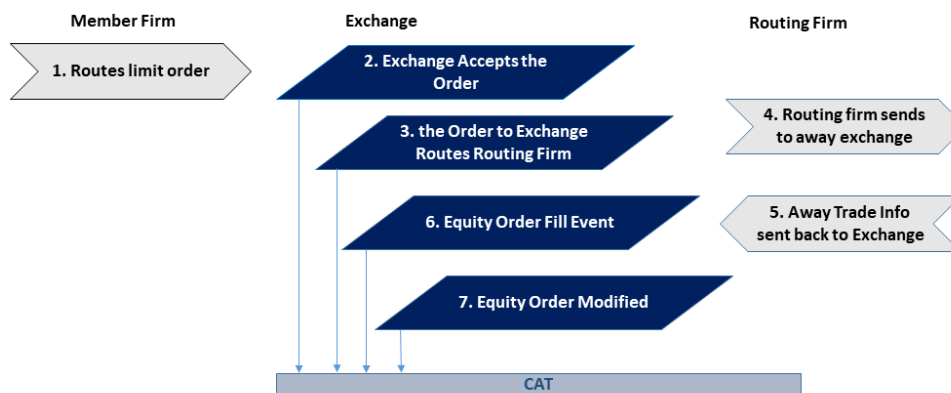

Figure 9: Order Modified Event due to a fill at an away exchange example

## 8. Options Exchange Event Examples

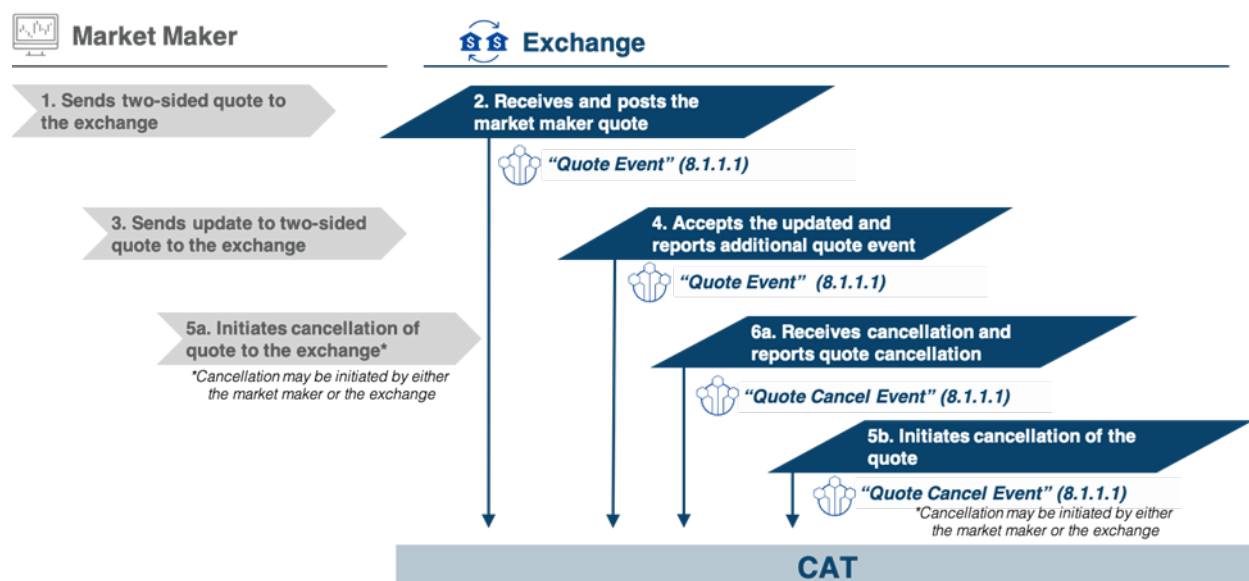

### 8.1. Quote and Quote Cancel Events

Some exchanges use the term "order" to cover both quotes and non-quote orders. For the purpose of reporting to CAT, a quote is to be interpreted as an order/quote that qualifies as a market maker quote for the purposes of satisfying Section 6.4(d)(iii) of the CAT NMS Plan. That is the section which grants relief to market makers from reporting their quotes to CAT, leaving the exchanges themselves with the sole responsibility of reporting quotes to CAT. If such order/quotes received by the exchange would provide the market maker an exemption from reporting the quote, then the order/quote must be reported to CAT as a quote, not an order.

CAT accepts both one-sided and two-sided quotes.

#### 8.1.1. Two-Sided Quotes Example

The following section will provide examples of reportable events for a two-sided market maker quote when it is posted as a new quote, updated by the market maker, then canceled by the market maker or the exchange. Both the new quote and the updated quote are expressed by the Quote Event, while the quote cancel is expressed by the Quote Cancel Event.

**Figure 13: Two-Sided Quote Example**

**Table 72: Two-Sided Quote Example**

#	Step	Reported Event	Comments
1	Market maker sends two-sided quote to the exchange	NA	<ul style="list-style-type: none"> <li>Market Maker sends updated two sided (buy/sell) quotes, updates them and cancels them</li> </ul>
2.	Exchange 1 posts the market maker quote	<b>Quote Event</b>  type: OQ exchange: Exch1 eventTimestamp: 20170113T132436.124039 sequenceNumber: 1245 marketMaker: ABCD:A16 sentTimestamp: 20170113T132436.123456 optionID: 6779 quoteID: Q9876 onlyOneQuote: true, bidPrice: 2.40 bidQty: 10 askPrice: 2.43 askQty: 10	<ul style="list-style-type: none"> <li>The quote is a two-sided quote for an option with the ID: 6779</li> <li>The field market maker is the Member Alias assigned by the SRO to identify the market maker issuing the quote. In this case, the market maker ABCD has multiple users (e.g., acronyms used to differentiate users within the same MM), so the characters A16 denote the user or sub-account.</li> <li>The sent timestamp denotes when the market maker sent the quote to the marketplace, while the event timestamp is when the exchange received the quote</li> </ul>
3	Market maker sends an update to the two sided quote to the exchange		<ul style="list-style-type: none"> <li>The market maker sends an update raising the bid price of the original quote to 2.41</li> </ul>

}
```

### 8.2.2. Complex Option Order Accepted Event Example

In the example below, the exchange only creates leg orders at the time an order is executed. Thus, an order on the complex option would have a report sent to CAT for an order accepted event at the parent

level of the complex order. Any leg reports would wait until the leg orders are actually created when a trade occurs.

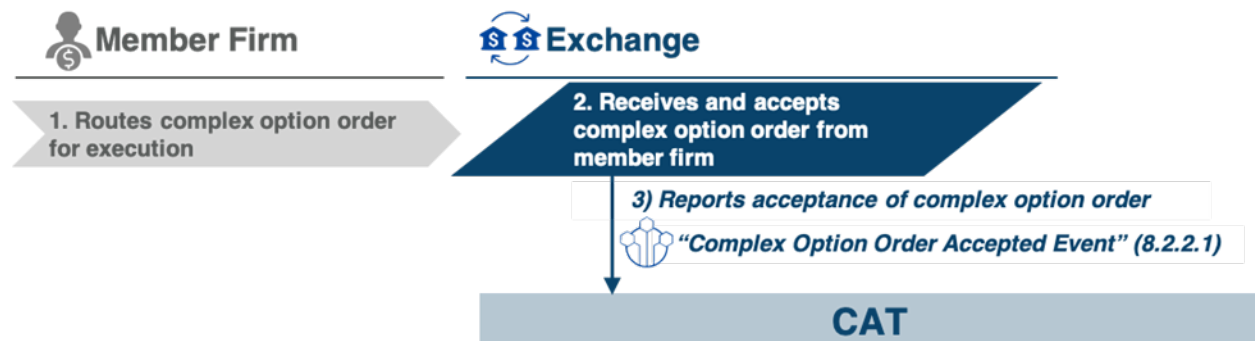

The examples in this section will use an order on the complex option with optionID 9843. This hypothetical complex option has two option series legs:

#### **Complex Option – optionID: 9843**

**Table 75: Complex Option Order Example: Legs**

optionID	side	ratio	primaryDeliverable	expirationDate	strikePrice	putCall	exerciseStyle	settlement
1491	Buy	1	XYZZY	21 Oct 2017	30.00	C	American	PM
1492	Sell	1	XYZZY	21 Oct 2017	32.50	C	American	PM

For this example, we suppose at 192411.121456789 on April 20, 2017 an order was accepted for 10 units of complex option 9843 at net price -65 per unit.

**Figure 16: Complex Option Order Example**

**Table 76: Complex Option Order Example**

#	Step	Reported Event	Comments
1	Market maker sends complex option order to the exchange	NA	<ul style="list-style-type: none"> <li>The order is routed over session ID 7, with a price of -65, quantity of 10, for the option defined by the exchange as Option ID 9843</li> </ul>

#	Step	Reported Event	Comments
2	Exchange 1 accepts the complex option order		
3	<p>Exchange 1 reports a complex option order accepted event.</p> <p>Leg events are not reported until an execution happens, so the only event reported at this time is for the complex option order.</p>	<p><b>Complex Option Order Accepted Event</b></p> <p>type: OCOA  exchange: Exch1  eventTimestamp: 20170420T142411.121456789  sequenceNumber: 909  optionID: 9843  orderID: 8473692  side: AsDirected  routingParty: FRMA  routedOrderID: 4567123  session: 7  price: -65.00  quantity: 10  timeInForce: DAY  member: Mem01</p>	<ul style="list-style-type: none"> <li>• The option ID is the ID of the option as assigned by the exchange.</li> <li>• The Order ID is the ID of the order as assigned by the exchange, while the routed order ID is the order ID as defined by the member firm.</li> </ul>

## 8.4. Simple Option Order Modified Event Created As a Result of Partial Execution at Away Exchange

This example shows how to populate the Simple Option Order Modify Event in the scenario where an order is routed to an away exchange. At the away exchange, the order is partially executed, leaving quantity returned to the exchange for the order. The Option Order Modify event is created showing this change in order quantity.

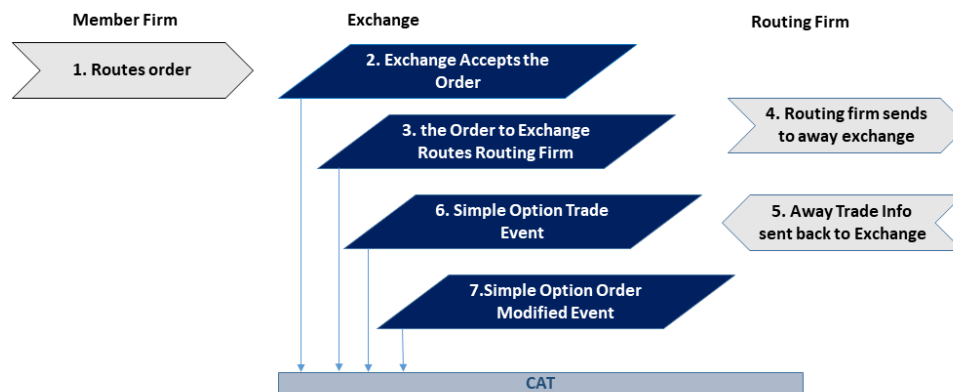

Figure 18: Simple Option Order Modification Event due to execution at away exchange

#	Step	Reported Event	Comments
1	Member firm sends option order to the exchange	NA	<ul style="list-style-type: none"> <li>The order is routed over session ID 3, with a price of 18.59, quantity of 10, for the option defined by the exchange as Option ID 1208</li> </ul>

## 8.6. Complex Options Trade Events Examples

In all cases, complex option trades are reported to CAT only at the leg level. There is no roll-up trade reported at the complex order level. For example, an order on the complex option (ID 9851) below would have had corresponding orders reported to CAT for each of the underlying legs. As the following examples will show, trades on this complex option will report by leg, with each leg trade event corresponding to an order event on the leg that is in turn attached to a parent-level complex order event.

### Complex Option – optionID: 9851

**Table 78: Complex Options Trade Events Example: Legs**

optionID	side	ratio	primaryDeliverable	expirationDate	strikePrice	putCall	exerciseStyle	settlement
1491	Buy	1	XYZZY	21 Oct 2017	30.00	C	American	PM
1492	Sell	1	XYZZY	21 Oct 2017	32.50	C	American	PM

XYZZY	Buy	100						
-------	-----	-----	--	--	--	--	--	--

This section follows a series of trade events on the complex option described above, along with examples of the quotes and orders that would be referenced in those trades.

A new market maker quote is posted for the option leg 1491

A new market maker quote is posted for the option leg 1492

An order is placed for quantity 10 of the complex option 9851

A trade on the first option leg 1491 is reported (10 contracts)

A trade on the second option leg 1492 is reported (10 contracts)

A fill on the stock leg XYZZY is reported (1,000 shares)

}
```

### 8.8. Complex Quote Event with Resulting Trades Example

Complex Quote events are reported to CAT using only the complex option ID, which has been submitted as a CODE record in the reporting exchange's option dictionary. Corresponding leg level events for each individual option are not reported. Resulting trades are always reported at leg level for the individual options that were traded. These trade (OT) events must be reported with the complex option ID of the complex quote (OCQ) event specified using the 'complexOptionID' name/value pair in the

*executionCodes* field of the appropriate side. While FINRA CAT does not perform automated linkage validation or lifecycle formation for Quote events as of April 1, 2025, these events are linkable using the *complexOptionID* value and the *quoteID*.

### **Complex Option – optionID: C567890**

**Table 80: Complex Options Example: Legs**

optionID	side	ratio	primaryDeliverable	expirationDate	strikePrice	putCall	exerciseStyle	settlement
O123456	Buy	1	XYZ	16 Jan 2026	140	C	American	PM
O123457	Sell	2	XYZ	16 Jan 2026	145	C	American	PM

This section contains a complex quote for the complex option described above and some sample leg level trades that result.

A new market maker complex quote is entered for complex option ID C567890

A complex order is accepted for the opposite side of complex option ID C567890

A trade on the first option leg for option ID O123456 is reported (6 contracts)

A trade on the second option leg for option ID O123457 is reported (12 contracts)

**Table 81: Complex Options Trade Events Example**

#	Step	Reported Event	Comments
1	Market maker sends two-sided complex quote to the exchange	NA	Quote is for the complex option the exchange identifies as option ID C567890, as reported as a CODE event in their option dictionary
2.	Exchange 1 posts the market maker complex quote	<b>Complex Quote Event</b>  type: OCQ exchange: Exch1 sentTimestamp: 20250428T142036.123456 eventTimestamp: 20250428T142036.123486789	The quote is a two-sided quote for an option with the option ID: C567890  The sent timestamp denotes when the market maker sent the quote to the marketplace, while the event timestamp is when the exchange received

#	Step	Reported Event	Comments
		marketMaker: MM1 optionID: C567890 quoteID: 12345 onlyOneQuote: true bidPrice: -21.40 bidQty: 11 askPrice: 17.90 askQty: 8	<p>the quote.</p> <p>In this example, the negative bid price indicates that the market maker is looking to receive a net credit of at least \$21.40 for the trades of both legs "as directed" on the CODE option dictionary record.</p> <p>The positive ask price indicates that the market maker is willing to pay up a net debit of \$17.90 to execute the legs in the "opposite" direction than they are specified in the CODE option dictionary record.</p> <p>Note that the complex quote is reported as a single event specifying the number of strategy "units" at a net price for all legs. No corresponding leg level quotes are reported.</p>
5	Member Firm (FRMA) sends complex option order to the exchange	NA	Industry Member sends a multi-leg order to Exch1 in the opposite direction than specified in the CODE record in the exchange's option dictionary.
6	Exchange 1 accepts the complex option order	<i>Shown in steps 7, 8, and 9</i>	
7	Exchange 1 reports a complex option order accepted event	<b>Complex Option Order Accepted Event</b>  type: OCOA exchange: Exch1 eventTimestamp: 20250428T142411.121456789 optionID: C567890 orderID: 8473692 side: Opposite routingParty: FRMA routedOrderID: 4567123 session: 7 price: 21.40 quantity: 6 timeInForce: DAY member: Mem01	<p>The option ID is the ID of the complex option as assigned by the exchange in the CODE option dictionary record.</p> <p>The Order ID is the ID of the order as assigned by the exchange, while the routed order ID is the order ID as defined by the member firm.</p> <p>The positive price indicates that the customer looking to pay no more than \$21.40 for the trades of both legs.</p>
8	Exchange 1 reports a simple option order accepted event for the first leg	<b>Simple Option Order Accepted Event</b>  type: OOA exchange: Exch1 eventTimestamp: 20250428T142411.121456790 optionID: O123456 orderID: 8473692_1	<p>This section describes the Simple Option Order Accepted Event for Leg 1 corresponding to the complex option order described above.</p> <p>Note that in this Simple Option Order Accepted Event for Leg 1, the Routed Order</p>

#	Step	Reported Event	Comments
		side: Sell quantity: 6 displayQty: 0 timeInForce: DAY exchOriginCode: C executingFirm: 999 complexOrderID: 8473692 complexOptionID: C567890 member: Mem01	ID is the same as reported in the parent complex order, however, the order ID for this leg is unique.
9	Exchange 1 reports a simple option order accepted event for the second leg	<b>Simple Option Order Accepted Event</b>  type: OOA exchange: Exch1 eventTimestamp: 20250428T142411.121456791 optionID: O123457 orderID: 8473692_2 side: Buy quantity: 12 displayQty: 0 timeInForce: DAY exchOriginCode: C executingFirm: 999 complexOrderID: 8473692 complexOptionID: C567890 member: Mem01	This section describes the Simple Option Order Accepted Event for Leg 2 corresponding to the complex option order described above.  Note that in this Simple Option Order Accepted Event for Leg 2, the Routed Order ID is the same as reported in the parent complex order, however, the order ID for this leg is unique.
11	Exchange 1 matches complex order to complex quote and executes leg trades	<b>Option Trade Event:</b>  type: OT exchange: Exch1 eventTimestamp: 20250428T142411.123456795 tradeID: 194378 optionID: O123456 quantity: 6 price: 23.80 nbbPrice: 23.80 nbbQty: 10 nboPrice: 24.90 nboQty: 10  Buy Side Details side: Buy quoteID: 12345 executingFirm: 987 mktMkrSubAccount: DEF exchOriginCode: M executionCodes: complexOptionID=C567890 member: MM1  Sell Side Details side: Sell	This event describes a trade on the first leg (option O123456) of the complex option C567890. In this case, the trade event fills all of the (sell) quantity requested by the order, and 6 contracts of the (buy) quantity offered by the market maker.  Note that the market maker quote for the complex option (C567890) of the first leg is referenced in the buy side details, while the order for the first option leg generated as a result of the complex order is referenced in the sell side details.  The exchange reports the 'complexOptionID' name/value pair in the side details (buy) of the MM trade to indicate that the quote is a complex quote and provide the ability to link the trade back to source quote.

12	Exchange 1 matches order for leg 2 to a market maker quote and executes trade	<p><b>Option Trade Event:</b></p> <p> type: OT  exchange: Exch1  eventTimestamp: 20250428T142411.123456796  sequenceNumber: 1209  tradeID: 194379  optionID: O123457  quantity: 12  price: 22.60  nbbPrice: 21.40  nbbQty: 10  nboPrice: 22.60  nboQty: 10 </p> <p> <b>Buy Side Details</b>  side: Buy  orderID: 8473692_2  executingFirm: 999  exchOriginCode: C  member: Mem01 </p> <p> <b>Sell Side Details</b>  side: Sell  quoteID: 12345  executingFirm: 987  mktMkrSubAccount: DEF  exchOriginCode: M  executionCodes: complexOptionID=C567890  member: MM1 </p>	<p>This event describes a trade on the second leg (option O123457) of the complex option C567890. Similarly, this trade event fills all of the (buy) quantity of the leg order generated as a result of the complex order, and only 12 contracts of the (sell) quantity offered by the market maker.</p> <p>This trade has executed in ratio, as defined in complex option, to the trade on the first leg. Note that on this leg, the broker who placed the order is on the buy side, while the market maker is on the sell side.</p> <p>The exchange reports the 'complexOptionID' name/value pair in the side details (sell) of the MM trade to indicate that the quote is a complex quote and provide the ability to link the trade back to source quote.</p>

### 8.8.1.JSON Examples

#### Complex Quote Event

```
{
  "type": "OCQ",

## **9. Submission Process**

This section has been removed for security purposes.

## **10. Feedback and Corrections**

This section has been removed for security purposes.

## **11. Testing**

This section has been removed for security purposes.

## **12. Additional Information**

Additional information is available from the CAT Public Website or the Service Desk. Details are provided below.

### **12.1. Public Website**

Public Website (<http://www.catnmsplan.com>) is to provide primary information about CAT. The content includes: Link to SEC Rule 613, Press Releases, Technical Specifications, User Manuals, FAQs, Training Materials and Contact info.

### **12.2. FINRA CAT Help Desk**

The FINRA CAT Helpdesk is the primary source for answers to questions about CAT, including questions regarding: clock synchronization, firm reporting responsibilities, interpretive questions, technical specifications for reporting to CAT and more. The FINRA CAT Helpdesk can be reached by phone at 888-696-3348 or e-mail at [help@finracat.com](mailto:help@finracat.com).

# Appendices

## Appendix A. Clock Synchronization Requirement

In previous sections, details are described regarding the Order Events and data elements. Timestamp, as one of the required data elements for each order event, must be correctly recorded by Participants at a predefined granularity. This section provides detailed requirements and a recommended approach on how Participants should manage clock synchronization.

In order to comply with CAT NMS Plan requirements of Clock Synchronization and correctly record the Timestamp fields for order events, Participants are required synchronize Business Clocks, at a minimum, to within 100 microseconds of the time maintained by the National Institute of Standards and Technology (NIST).

The tolerance includes:

Difference between the NIST standard and a time provider's clock;

Transmission delay from the source; and

Amount of drift in the Participant's clock.

In order to ensure the accuracy of timestamps for Reportable Events, Participants are anticipated to adopt policies and procedures to verify such required synchronization each Trading Day (1) before the market opens, and (2) periodically throughout the Trading Day. Participants are recommended to keep documentation which provides details of their Business Clock synchronization process, and the resulting log files from the implementation of such processes.

Any time provider and technology may be used for clock synchronization as long as the Business Clocks are in compliance with the accuracy requirement.

If additional details are needed, please refer to the Clock Synchronization User Guide to be published separately.

Note: The tolerance for clock synchronization does not impact the amount of time allowed for CAT reporting. CAT does NOT require reporters to report order information within 100 microseconds of receiving an order.

## Appendix B. Error Codes

An error code is a machine-parseable description of why a file or record was rejected. This differs from an error description, which is intended for human consumption. The following is a listing of errors codes for data ingestion and linkage processing.

### B.1. Data Ingestion Errors

The tables below contain error messages that are associated with Data Ingestion.

**Table 82: Ingestion Error Codes**

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/ Error
1	OE.INGEST,MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.010	Required field is missing	Required field is missing	ERROR
2	OE.INGEST,MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.020	Numeric value expected	Bad value for a numeric data type	ERROR
3	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.030	Integer Value expected	Bad value for an integer	ERROR
4	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.040	Unsigned Integer expected	Bad value for an unsigned integer	ERROR
5	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.050	Boolean Value expected	Bad value for a Boolean	ERROR
6	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.060	Invalid JSON format	Not in JSON format	ERROR
7	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.070	Exceeds maximum length of field	Invalid character length of a text or alpha numeric data type	ERROR
8	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.080	Invalid Timestamp Format	Invalid timestamp format	ERROR
9	FT.INGEST, RME.INGEST	.085	Invalid Time Format	Invalid time format	ERROR

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
10	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.090	Invalid Date Format	Invalid date format	ERROR
11	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.100	Value is not listed as a valid choice	Value is not listed as a valid choice	ERROR
12	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.110	JSON record has invalid Field Name	JSON record has invalid Field Name	ERROR
13	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.120	Text or alphanumeric type has an illegal character	Text or alphanumeric type has an illegal character	ERROR
14	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.130	Invalid name value pair data	NameValue value does not follow documented format	ERROR
15	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.140	Numeric value is missing required fraction digits	Numeric value is missing required fraction digits	ERROR
16	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.150	Numeric value is missing required whole digits	Numeric value is missing required whole digits	ERROR
17	OE.INGEST, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.160	CSV record has invalid number of fields	When, for tokenizing, a CSV line results in less tokens than required.	ERROR
18	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.170	Number of rows with errors exceed 10% of Row Count of Data File	Number of errors exceed 10% of Row Count of Data File	ERROR
	Retired Error Code	.180	Error code has been retired and may no longer be used.	Error code has been retired and may no longer be used.	ERROR
20	OE.COUNT, MD.COUNT, OD.COUNT, MMD.COUNT, FT.COUNT, OTH.COUNT, RME.INGEST, BBO.INGEST	.190	File Record Count does not match metadata	File Record Count does not match metadata	ERROR
21	INT.META	.200	Mismatch in meta file	Mismatch in Metadata as compared to file name	ERROR
22	OE.INGEST, FT.INGEST, RME.INGEST, BBO.INGEST	.210	Invalid Symbol	Equity Symbol is Incorrect	WARNING
23	OE.INGEST, MD.REC, MMD.REC, RME.INGEST, BBO.INGEST	.220	Invalid Member ID	Member ID is invalid	WARNING

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
24	FILE.NAME	.230	File Name is Invalid	File Name is Invalid (Invalid Format, Duplicate, File Name too Long, File Name for future date)	ERROR
25	INT.META	.240	Replacement File Not Permitted	A replacement file for OrderEvents, FinraTransactions, and RejectMessageEvents file kinds is not permitted after T+4 @ 8:00 a.m. ET.	ERROR
26	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.250	Unknown message type	The message type specified in the record is unknown	ERROR
27	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.260	Sub-fields in Name/Value have value errors	Sub-fields in Name/Value have value errors	ERROR
28	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.270	Invalid array value for declared type	Invalid array value for declared type	ERROR
29	OE.INGEST, MD.REC, OD.REC, MMD.REC, FT.INGEST, OTH.REC, RME.INGEST, BBO.INGEST	.280	Expected CSV format is invalid	Expected CSV format is invalid	ERROR
30	OE.INGEST, RME.INGEST	.290	Numeric value is out of range	Numeric value is out of the allowed range as defined by the Data Dictionary	ERROR
31	FILE.TIMEOUT	.1050	Time out waiting for meta file		ERROR
32	FILE.TIMEOUT	.1060	Time out waiting for data file		ERROR
33	FILE.NAME	.1070	File is not compressed		ERROR

**Table 83: Conditional Validation Error Codes**

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	OE.INGEST, RME.INGEST	.2000	Invalid reporter	<i>Event(s): All Equity and Options Events, RME</i> reporter on the event must match the CAT Reporter ID in the file name	ERROR
2	OE.INGEST	.2010	Missing price	<i>Event(s): EOA, EOR, EIR, EMR, EORS</i> price must be provided and greater than or equal to zero when orderType indicates a Limit order.	ERROR

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
				<i>Event(s): EOM</i> price must be provided and greater than zero when <code>orderType</code> indicates a Limit order and initiator is 'Firm' or 'MarketMaker'.	
3	OE.INGEST	.2020	Missing or Invalid displayPrice	<i>Event(s): EOA, EOM, EOJ, EORS</i> displayPrice must be provided and greater than or equal to zero when displayQty is provided and is greater than zero.	ERROR
4	OE.INGEST	.2030	Missing routedOrderID	<i>Events: EOM, EOJ</i> routedOrderID must be provided when initiator is 'Firm' or 'MarketMaker'.	ERROR
5	OE.INGEST	.2040	Missing routingParty	<i>Events: EOM, EOJ</i> routingParty must be provided when initiator is 'Firm' or 'MarketMaker'.	ERROR
6	OE.INGEST	.2050	Missing session	<i>Events: EOM, EOJ</i> session must be provided when initiator is 'Firm' or 'MarketMaker'.	ERROR
7	OE.INGEST	.2060	Missing side	<i>Events: EOM, EOJ</i> side must be provided when initiator is 'Firm' or 'MarketMaker'.	ERROR
8	OE.INGEST	.2070	Missing displayQty	<i>Events: EOJ</i> displayQty must be provided when displayPrice is provided.	ERROR
9	OE.INGEST	.2080	Missing quantity	<i>Events: EOJ</i> quantity must be provided when initiator is 'Firm' or 'MarketMaker'.	ERROR
10	OE.INGEST	.2090	Invalid orderID	<i>Events: EOT</i> buyDetails.orderID must be provided when and only when the 'NOBUYID' does not exist in any executionCodes field for the event (including executionCodes, buyDetails.executionCodes, and sellDetails.executionCodes). sellDetails.orderID must be provided when and only when the 'NOSELLID' does not exist in any executionCodes field for the event (including executionCodes, buyDetails.executionCodes,	ERROR

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
				and sellDetails.executionCodes).	
11	OE.INGEST	.2100	Missing side	<i>Events: EOT</i> buyDetails.side must be provided if buyDetails.orderID is provided. sellDetails.side must be provided if sellDetails.orderID is provided.	ERROR
12	OE.INGEST	.2110	Missing member	<i>Events: EOT</i> buyDetails.member must be provided if buyDetails.orderID is provided. sellDetails.member must be provided if sellDetails.orderID is provided.	ERROR
13	OE.INGEST	.2120	Missing capacity	<i>Events: EOT</i> buyDetails.capacity must be provided if buyDetails.orderID is provided. sellDetails.capacity must be provided if sellDetails.orderID is provided.	ERROR
14	OE.INGEST	.2130	Missing clearingNumber	<i>Events: EOT</i> buyDetails.clearingNumber must be provided if buyDetails.orderID is provided. sellDetails.clearingNumber must be provided if sellDetails.orderID is provided.	ERROR
15	OE.INGEST	.2140	Missing quoteID or askQuoteID	<i>Events: OQ, OQC</i> At least one of quoteID or askQuoteID must be provided when onlyOneQuote flag is 'False'	ERROR
16	OE.INGEST	.2150	Missing bidPrice and askPrice	<i>Events: OQ</i> At least one of bidPrice or askPrice must be provided.	ERROR
17	OE.INGEST	.2160	Missing complexOrderID	<i>Events: OOA, OSL, OOM, OSLM, OOJ, OSLJ, OOR, OIR, OFP</i> complexOrderID must be provided if complexOptionID is provided.	ERROR
18	OE.INGEST	.2170	Missing or Invalid displayPrice	<i>Events: OOA, OOM, OOJ, OFP</i> displayPrice must be provided and greater than or equal to zero on	ERROR

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
				simple option orders (i.e. complexOrderID is not populated) when displayQty is provided and is greater than zero.	
19	OE.INGEST	.2180	Missing price	<p><i>Events: OOA OOR, OIR, OOMR</i> price must be provided and greater than or equal to zero on simple option orders (i.e. complexOrderID is not populated) when orderType indicates a Limit order.</p> <p>Validation does not apply to Market orders.</p> <p><i>Events: OOM</i> price must be provided and greater than or equal to zero on simple option orders (i.e. complexOrderID is not populated) when orderType indicates a Limit order and initiator is 'Firm' or 'MarketMaker'.</p>	ERROR
20	OE.INGEST	.2200	Missing routingParty	<p><i>Events: OOA</i> routingParty must be provided for simple options (i.e. when complexOrderID is not populated).</p> <p><i>Events: OOM, OOJ</i> routingParty must be provided for simple options (i.e. when complexOrderID is not populated) when initiator is 'Firm' or 'MarketMaker'.</p>	ERROR
21	OE.INGEST	.2210	Missing session	<p><i>Events: OOA</i> session must be provided for simple options (i.e. when complexOrderID is not populated).</p> <p><i>Events: OOM, OOJ</i> session must be provided for simple options (i.e. when complexOrderID is not populated) when initiator is 'Firm' or 'MarketMaker'.</p>	ERROR
22	OE.INGEST	.2220	Missing timeInForce	<p><i>Events: OOM</i> timeInForce must be provided for simple options (i.e. when complexOrderID is not populated).</p>	ERROR
23	OE.INGEST	.2230	Missing	<i>Events: OOM, OOJ</i>	ERROR

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
			displayQty	displayQty must be provided for simple options (i.e. when complexOrderID is not populated).	
24	OE.INGEST	.2240	Missing routedOrderID	<i>Events: OOM, OOJ</i> routedOrderID must be provided for simple options (i.e. when complexOrderID is not populated) when initiator is 'Firm' or 'MarketMaker'.	ERROR
25	OE.INGEST	.2250	Missing quantity	<i>Events: OOM, OOJ</i> quantity must be provided for simple options (i.e. when complexOrderID is not populated) when initiator is 'Firm' or 'MarketMaker'.	ERROR
26	OE.INGEST	.2260	Missing side	<i>Events: OOM, OOJ</i> side must be provided when initiator is 'Firm' or 'MarketMaker'	ERROR
27	OE.INGEST	.2270	Missing optionID or symbol	<i>Events: OOC, OOR, OIR, OOMR, OOCR</i> Exactly one of optionID or symbol must be provided.	ERROR
28	OE.INGEST	.2280	Both orderID and quoteID provided	<i>Events: OPTA</i> Both optionID and quoteID cannot be provided.  <i>Events: OT</i> For buyDetails, both buyDetails.optionID and buyDetails.quoteID cannot be provided. For sellDetails, both sellDetails.optionID and sellDetails.quoteID cannot be provided.	ERROR
29	OE.INGEST, RME.INGEST	.2290	Invalid cycleDate	<i>Events: All Options Events, NOTE, RME, SHD, STE</i> When provided, cycleDate must be a Trade Date between the Event Date and Trade Date + 1, inclusive of both dates.	ERROR
30	BBO.INGEST	.2300	Invalid combination of bidPrice and bidQty	<i>Events: EBBO</i> If one of bidPrice or bidQty is provided, then both must be provided.	ERROR
31	BBO.INGEST	.2310	Invalid combination of	<i>Events: EBBO</i>	ERROR

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
			askPrice and askQty	If one of askPrice or askQty is provided, then both must be provided.	

## B.2. Reference Data Validation Errors

**FINRA CAT will begin validating reference data at a later time.**

The tables below contain error messages that are associated with Reference Data Validation.

**Table 84: MemberDictionary Member Reference Data Validation Error Codes**

The following reference data errors may be generated for a `MemberDictionary` file when invalid conditions are detected within the file. To resolve these errors, the Participant must provide a replacement `MemberDictionary` file with the correct information.

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	MD.REF	.500	Member Alias assigned to multiple Firms	<i>Event(s): MDE</i> A <code>memberAlias</code> may not be assigned to more than one Firm (ID) for the same exchange and trade date.	ERROR
2	MD.REF	.510	Member Details provided for missing Member Alias	<i>Event(s): MADE</i> Each <code>memberAlias</code> reported on a MADE record must correspond to a <code>memberAlias</code> reported on an MDE record for the same exchange and trade date.	ERROR

**Table 85: MarketMakerDictionary Member Reference Data Validation Error Codes**

The following reference data errors may be generated for a `MarketMakerDictionary` file when the provided member alias data does not exist in the Member Dictionary or the provided symbol is invalid.

If the error was caused by incorrect data submitted in the `MemberDictionary` file, the Participant must:

- a) submit a replacement `MemberDictionary` file with the correct information

AND

- b) submit a replacement `MarketMakerDictionary` file for reprocessing.

If the error was caused by incorrect data submitted in the `MarketMakerDictionary` file, the participant must:

- a) submit a replacement `MarketMakerDictionary` file with the correct information.

If the error was caused by an incorrect symbol, the Participant must:

- a) Determine if the symbol that was provided was correct.
- b) If the symbol provided by the Participant was correct and should be in the Equity Symbol Master, contact the FINRA CAT Helpdesk for assistance in resolving the issue.
- c) If the symbol provided by the Participant was incorrect, submit corrected records for reprocessing.

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	MMD.REF	.520	Market Maker not found in Member Dictionary	<i>Event(s): MMDE</i> The <code>marketMaker</code> is invalid. The <code>marketMaker</code> must correspond to a valid <code>memberAlias</code> in the Member Dictionary for the same exchange and trade date.	ERROR
2	MMD.REF	.530	Invalid Symbol	<i>Event(s): MMDE</i> The <code>symbol</code> is invalid. The <code>symbol</code> must correspond to a valid <code>symbol</code> for the same trade date.	ERROR

**Table 86: `OrderEvents` Member Reference Data Validation Error Codes**

The following reference data errors may be generated for an `OrderEvents` file when the provided member alias does not exist in the Member Dictionary or the provided symbol/option ID is invalid.

If the error was caused by incorrect data submitted in the `MemberDictionary` file, the Participant must:

- a) submit a replacement `MemberDictionary` file with the correct information

AND

- b) resubmit the rejected `OrderEvents` records using the corrections/replacement process described in Section 10.9.

If the error was caused by incorrect data submitted in the OptionsDictionary file, the Participant must:

- a) submit a replacement `OptionsDictionary` file with the correct information
- AND
- b) resubmit the rejected `OrderEvents` records using the corrections/replacement process described in Section 10.9.

If the error was caused by incorrect data submitted in the OrderEvents file, the participant must:

- a) resubmit the rejected `OrderEvents` records using the corrections/replacement process described in Section 10.9.

If the error was caused by an incorrect symbol, the Participant must:

- a) Determine if the symbol that was provided was correct.
- b) If the symbol provided by the Participant was correct and should be in the Equity Symbol Master, contact the FINRA CAT Helpdesk for assistance in resolving the issue.
- c) If the symbol provided by the Participant was incorrect, submit corrected records for reprocessing.

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	OE.REF	.540	Market Maker not found in Member Dictionary	<i>Event(s): OQ, OQC</i> The <code>marketMaker</code> is invalid. The <code>marketMaker</code> must correspond to a valid <code>memberAlias</code> in the Member Dictionary for the same exchange and trade date.	ERROR
2	OE.REF	.545	Member not found in Member Dictionary	<i>Event(s): All Equities and Options Events that include member</i> The <code>member</code> is invalid. The <code>member</code> must correspond to a valid <code>memberAlias</code> in the Member Dictionary for the same exchange and trade date.	ERROR

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
3	OE.REF	.550	Routing Party not found in Member Dictionary	<i>Event(s): All Equities and Options Events that include routingParty</i> The routingParty is invalid. The routingParty must correspond to a valid memberAlias in the Member Dictionary for the same exchange and trade date.	ERROR
4	OE.REF	.555	Floor Broker not found in Member Dictionary	<i>Event(s): OT</i> The floorBroker is invalid. The floorBroker must correspond to a valid memberAlias in the Member Dictionary for the same exchange and trade date.	ERROR
5	OE.REF	.560	Invalid Symbol	<i>Event(s): All Equity Events, STE</i> The symbol is invalid. The symbol must correspond to a valid symbol for the same trade date.	ERROR
6	OE.REF	.565	Option ID not found in Options Dictionary	<i>Event(s): All Option Events, STE</i> The optionID/complexOptionID must correspond to a valid optionID in the Options Dictionary (provided via an OSDE or CODE record) for the same exchange and trade date.	ERROR

**Table 87: FinraTransactions Reference Data Validation Error Codes**

The following reference data errors may be generated for a `FinraTransactions` file when the provided member alias data does not exist in the Member Dictionary or the provided symbol is invalid.

If the error was caused by incorrect data submitted in the `MemberDictionary` file, the Participant must:

- a) submit a replacement `MemberDictionary` file with the correct information
- AND
- b) resubmit the rejected `FinraTransactions` records using the corrections/replacement process described in Section 10.9.

If the error was caused by incorrect data submitted in the `FinraTransactions` file, the participant must:

- a) resubmit the rejected `FinraTransactions` records using the corrections/replacement process described in Section 10.9.

If the error was caused by an incorrect symbol, the Participant must:

- a) Determine if the symbol that was provided was correct.
- b) If the symbol provided by the Participant was correct and should be in the Equity Symbol Master, contact the FINRA CAT Helpdesk for assistance in resolving the issue.
- c) If the symbol provided by the Participant was incorrect, submit corrected records for reprocessing.

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	FT.REF	.570	Reporting Executing MPID not found in Member Dictionary	<i>Event(s): TRF</i> The <code>reportingExecutingMpid</code> is invalid. The <code>reportingExecutingMpid</code> must correspond to a valid <code>memberAlias</code> in the Member Dictionary for the same exchange and execution date.	ERROR
2	FT.REF	.575	Contra Executing MPID not found in Member Dictionary	<i>Event(s): TRF</i> The <code>contraExecutingMpid</code> is invalid. The <code>contraExecutingMpid</code> must correspond to a valid <code>memberAlias</code> in the Member Dictionary for the same exchange and execution date.	ERROR
3	FT.REF	.580	Invalid Symbol	<i>Event(s): TRF</i> The <code>symbol</code> is invalid. The <code>symbol</code> must correspond to a valid <code>symbol</code> for the same execution date (for TRF events).	ERROR

**Table 88: OTCHalts Reference Data Validation Error Codes**

The following reference data errors may be generated for an OTCHalts file when the provided symbol is invalid.

If the error was caused by an incorrect symbol, the Participant must:

- a) Determine if the symbol that was provided was correct.
- b) If the symbol provided by the Participant was correct and should be in the Equity Symbol Master, contact the FINRA CAT Helpdesk for assistance in resolving the issue.

- c) If the symbol provided by the Participant was incorrect, submit a replacement `OTCHalts` file with the correct information.

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	OTH.REF	.590	Invalid Symbol	<i>Event(s): FHR</i> The <code>symbol</code> is invalid. The <code>symbol</code> must correspond to a valid symbol for the same trade date.	ERROR

### B.3 Linkage Discovery Errors

Linkage Discovery errors are generated by performing event comparisons that result in the identification of unlinked events. See §10.10 for information on the Linkage Discovery process.

Unlinked error codes are assigned based on a processing order when determining the reason for an unlinked event. The process begins with the check associated with the codes having the lowest sequence value. When the “Multiple Fields did not Match” reason is assigned, it is because a determination could not be made. In such cases, it is possible that the unlink reason is because the other party’s event was not reported or had a processing error which prevented the event from participating in Linkage Discovery. In cases when linkage did not occur between venues, separate error codes will be assigned to the CAT Reporter whose record did not link and the CAT Reporter that was named.

**Table 89: Duplicate Record Error Codes**

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	OE.INTRAEXCHLNK	.301	Duplicate Event	<i>Event(s): All Equity and Option Events, FHR, TRF</i> The Exchange or FINRA event has already been received by CAT. The first instance of the event is retained; all subsequent submissions are rejected. This rejection is not repairable.	WARNING

**Table 90: Intravenue Linkage Error Codes**

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
---	--------------	------------	------------------------	-------------	---------------

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	OE.INTRAEXCHLNK	.5000	Missing a parent	The event in question does not have a required parent.	ERROR
2	OE.INTRAEXCHLNK	.5001	Trade Event – Order/Quote not found	The Trade Event side details reference an Order Key/Quote Key that does not exist in CAT because it was not reported or was rejected.	ERROR
3	OE.INTRAEXCHLNK	.5002	Paired Orders - Corresponding Paired Order Not found	The paired order in orderAttributes name/value pair does not match another order.	ERROR
4	OE.INTRAEXCHLNK	.5003	Originating event not found for long Lived order	This is for the order restatement event errors specifically. Occurs if OORS event is received, and the events from the previous day(s) are not found.	ERROR
5	OE.INTRAEXCHLNK	.5004	Matching trade not found	A post trade allocation/supplemental trade event refers to a trade that cannot be located	ERROR
6	OE.INTRAEXCHLNK	.5005	Late record, correction, or file replacement received after correction window (received after t+3 at 8:00 a.m. ET )	Warning will be retired as of June 15, 2022. Any input received after the correction window	WARNING
7	OE.INTRAEXCHLNK	.5007	Duplicate Trade Key	More than one Trade event was reported with the same Trade Key on the current CAT Processing Date. All events associated with the duplicate Trade Key will be rejected.	ERROR
8	OE.INTRAEXCHLNK	.5009	Duplicate Quote Key	More than one New Quote event were reported with the same Quote Key on the current CAT Processing Date. All events associated with the duplicate Quote Key will be rejected.	ERROR
9	OE.INTRAEXCHLNK	.5011	Duplicate Order Key	More than one primary order event and/or secondary order event which reassigned an Order Key was reported with the same Order Key on the current CAT Processing Date. All events associated with the duplicate Order Key will be rejected.	ERROR
10	OE.INTRAEXCHLNK	.5012	Duplicate Fulfillment Key	More than one Order Fulfillment events or Fulfillment Amendment events which assigned a new Fulfillment key were reported with the same Fill Key on the current CAT Processing Date. All events with a duplicate Fulfillment Key will be rejected	ERROR

**Table 91: Intervene Linkage Error Codes (Reported by Exchange/Display-Only Facility)**

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	OE.INTERVENUELNK	.6004	<i>routedOrderID</i> not found	The <i>routedOrderID</i> on the exchange Order Route/Order Accept/ <b>Equity Best Bid and Offer</b> event does not match to a corresponding <i>routedOrderID</i> on the industry member order	ERROR
2	OE.INTERVENUELNK	.6006	<i>routingParty</i> did not match	A matching <i>routedOrderID</i> was identified; however, the <i>routedOrderID</i> on the exchange Order Route/Order Accept/ <b>Equity Best Bid and Offer</b> event does not match to a corresponding <i>senderIMID</i> on the industry member order	ERROR
3	OE.INTERVENUELNK	.6008	<i>symbol</i> did not match OR <i>optionID</i> did not match	A matching <i>routedOrderID</i> was identified, however the <i>symbol</i> [for equity events] or <i>optionID</i> [for option events] on the exchange Order Route/Order Accept/ <b>Equity Best Bid and Offer</b> event does not match to a corresponding <i>symbol</i> or <i>optionID</i> on the industry member order	ERROR
4	OE.INTERVENUELNK	.6010	<i>session</i> did not match	A matching <i>routedOrderID</i> was identified, however, the <i>session</i> on the exchange Order Route/Order Accept/ <b>Equity Best Bid and Offer</b> event does not match to a corresponding session on the industry member order	ERROR
5	OE.INTERVENUELNK	.6012	Multiple fields did not match	A matching <i>routedOrderID</i> was identified, however, the <i>symbol</i> , <i>senderIMID</i> or a combination of fields on the exchange Order Route/Order Accept/ <b>Equity Best Bid and Offer</b> event does not match to corresponding field(s) on the industry member order	ERROR
6	OE.INTERVENUELNK	.6014	<i>destination</i> did not match	A matching <i>routedOrderID</i> was identified in an industry member order; however, the <i>ExchangeID</i> on the Order Route/Order Accept/ <b>Equity Best Bid and Offer</b> event did not match the <i>destination</i> on the corresponding industry member order.	ERROR
7	OE.INTERVENUELNK	.6016	Duplicate Route Linkage Key on Route to Firm	Unlinked due to duplicated Route Linkage Key on an outbound Route from an Exchange.	ERROR
8	OE.INTERVENUELNK	.6018	Duplicate Route Linkage Key on Accept/Modify	Unlinked due to a duplicated Route Linkage Key on an Accept/Modify/Equity Best Bid and Offer event even from an Exchange.	ERROR
9	OE.INTERVENUELNK	.6020	Duplicate Exchange/Firm Trade Key	More than one Trade event was reported with the same Exchange/Firm Trade Key on the current CAT Processing Date. All events associated with the duplicate Exchange/Firm Trade Key will be rejected.	ERROR
10	OE.INTERVENUELNK	.6022	<i>tapeTradeID</i> did	The <i>MOOTLINK</i> value (provided via the	ERROR

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
			not match	<i>executionCodes</i> MOOTLINK Name/Value pair) on the exchange Option Trade event does not match to a corresponding <i>tapeTradeID</i> on the industry member trade. <i>Effective December 5, 2022.</i>	
11	OE.INTERVENUELNK	.6024	<i>marketCenterID</i> did not match	A matching <i>tapeTradeID</i> was identified, however, the <i>exchangeID</i> on the exchange Option Trade event does not match to a corresponding <i>marketCenterID</i> on the industry member trade. <i>Effective December 5, 2022.</i>	ERROR
12	OE.INTERVENUELNK	.6026	<i>side</i> in <i>buyDetails</i> did not match	A matching <i>tapeTradeID</i> was identified, however, the <i>side</i> in <i>buyDetails</i> on the exchange Option Trade event does not match to a corresponding <i>side</i> in <i>buyDetails</i> on the industry member trade. <i>Effective December 5, 2022.</i>	ERROR
13	OE.INTERVENUELNK	.6028	<i>side</i> in <i>sellDetails</i> did not match	A matching <i>tapeTradeID</i> was identified, however, the <i>side</i> in <i>sellDetails</i> on the exchange Option Trade event does not match to a corresponding <i>side</i> in <i>sellDetails</i> on the industry member trade. <i>Effective December 5, 2022.</i>	ERROR

**Table 92: Intervene Linkage Error Codes (Reported by Firm)**

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	OE.INTERVENUELNK	.7005	<i>Named routedOrderID</i> not found	The <i>routedOrderID</i> reported by the Industry Member on the Order Route event does not match to a corresponding <i>routedOrderID</i> on the exchange order/Equity Best Bid and Offer event.	ERROR
2	OE.INTERVENUELNK	.7007	<i>Named routingParty</i> did not match	A matching <i>routedOrderID</i> was identified; however, the <i>senderIMID</i> on industry member order <i>did not match the routingParty</i> on the exchange order/Equity Best Bid and Offer event.	ERROR
3	OE.INTERVENUELNK	.7009	<i>Named symbol</i> did not match OR <i>Named optionID</i> did not match	A matching <i>routedOrderID</i> was identified, however the <i>symbol</i> [for equity events] or <i>optionID</i> [for option events] did not match on the corresponding <i>symbol/optionID</i> on the exchange order/Equity Best Bid and Offer event.	ERROR
4	OE.INTERVENUELNK	.7011	<i>Named session</i> did not match	A matching <i>routedOrderID</i> was identified, however, the <i>session</i> did not match the <i>session</i> on the corresponding exchange order/Equity Best Bid and Offer event.	ERROR

				CATReporterIMID reported by the Industry Member on a Trade event	
5	OE.TRADELNK	.4012	Multiple fields did not match	A TRF/ADF/ORF Trade Report with a matching unique identifier (e.g. Branch Sequence Number) was found however symbol, MarketCenterID, CATReporterIMID or a combination of fields provided on the TRF/ADF/ORF Trade Report did not match the corresponding fields in the Industry Member on a Trade event	ERROR

**Table 94: Off-Exchange Trade Linkage Error Codes (Reported by TRF)**

#	Error Prefix	Error Code	Error Code Description	Explanation	Warning/Error
1	OE.TRADELNK	.5003	<i>Named</i> - Matching <i>tapeTradeID</i> cannot be found	The <i>tapeTradeID</i> reported by the Industry Member on a Trade event did not match to a corresponding <i>tapeTradeID</i> Compliance ID in the TRF/ADF/ORF Trade Report	ERROR
2	OE.TRADELNK	.5005	<i>Named</i> - <i>marketCenterId</i> cannot be found	A matching <i>tapeTradeID</i> was identified, but <i>marketCenterId</i> reported by Industry Member did not match the Execution Time on the TRF/ADF/ORF trade report	ERROR
3	OE.TRADELNK	.5007	<i>Named</i> - <i>symbol</i> cannot be found	A matching <i>tapeTradeID</i> was identified, but the <i>symbol</i> reported by Industry Member did not match the <i>symbol</i> on the TRF/ADF/ORF trade report	ERROR
4	OE.TRADELNK	.5009	<i>Named</i> - Multiple fields did not match	A TRF/ADF/ORF Trade Report with a matching unique identifier (such as Branch Sequence Number) was found however symbol, MarketCenterID, CATReporterIMID or a combination of fields reported by Industry Member did not match to the corresponding fields on the TRF/ADF/ORF trade report	ERROR
5	OE.TRADELNK	.5011	<i>Named</i> – <i>CATReporterIMID</i> cannot be found	A matching <i>tapeTradeID</i> was identified, but the CATReporterIMID reported by Industry Member did not match the <i>Reporting or Contra IMID</i> on the TRF/ADF/ORF trade report	ERROR

#### B.4. Error Prefix Definition

**Table 95: Error Prefix Definitions**

#	Error Prefix	Definition
1	FILE.NAME	File name validation errors
2	FILE.TIMEOUT	Data and corresponding acknowledgement
3	FT.INGEST	Error on FINRA TRF/ADF/ORF file validation

4	BBO.INGEST	Error on Best Bid and Offer file validations.
5	FT.REF	Member or Symbol Reference Date validation error on FinraTransactions file
6	INT.META	Error on metadata file validation against its corresponding data file name.
7	MD.REC	Error on Member Dictionary file validation
8	MD.REF	Member Reference Data validation error on MemberDictionary file
9	OD.REC	Error on Options Dictionary file validation
10	MMD.REC	Error on Market Maker Dictionary file validation
11	MMD.REF	Member or Symbol Reference Data validation error on MarketMakerDictionary file
12	OE.INGEST	Error on Order Events file validation
13	OE.INTRAEXCHLNK	Error or warning in Order Events during Intra Exchange Linkage Validation
14	OE.INTERVENUELNK	Error during linkage between Industry Member Order Events and Exchange Order Events (applicable to option and equity exchanges)
15	OE.TRADELNK	Error during linkage between Industry Member Order Events and TRF reported data
16	OE.REF	Member, Symbol, or OptionID Reference Data validation error on OrderEvents file
17	OTH.REC	Error on OTC Halts/Resumes file validation
18	OTH.REF	Symbol Reference Data validation on OTCHalts file

## **Appendix C. Placeholder**

The previous content of Appendix C has been removed because it is not applicable to the FINRA CAT Plan Participant Technical Specifications. The heading is being retained to maintain the structure of the Appendix. This section may be repurposed in the future.

## Appendix D. CAT Date Definitions and Reporting Guidelines

The following key date terms are used throughout the document for reporting instructions:

**Table 96: Key Date Terms**

Term	Definition	Usage
Event Timestamp	The date and time the event occurred.	<i>eventTimestamp</i> is a field defined on every CAT event. Used to assign the CAT Trading Day.
Event Date	The date portion of the Event Timestamp.	Part of all Route Linkage Keys, the TRF Linkage Key, and the MOOT Linkage Key. Used to link records within the Event Date.
File Generation Date	The date the file was generated or reported. File Naming convention requires that the TRADE DATE (as defined below) be used in the File Name.	Used to guarantee uniqueness for a file across dates.
CAT Trading Day	Trading Day for Plan Participants is defined as beginning at midnight immediately following a Trade Date and ending immediately prior to midnight on the next Trade Date.  Weekends and holidays are not considered a Trading Day.  Refer to Section 9.7 and the table below for more information, including examples demonstrating the calculation of CAT Trading Day, Submissions Due Date and Corrections Due Date.	Used to calculate the submission due date and corrections due date.  For an event occurring on CAT Trading Day T:  <b>Submissions Due By:</b> CAT Trading Day + 1 @ 8:00 a.m. ET  <b>Corrections Due By:</b> CAT Trading Day + 3 @ 8:00 a.m. ET
Trade Date	Trade Date for Plan Participants is defined as beginning at midnight immediately following a Trade Date and ending immediately prior to midnight on the next Trade Date.  Weekends and holidays are not considered a Trade Date. An event occurring on a weekend or holiday will be assigned to the next Trade Date.	Used to calculate the due date of data delivered to Regulatory Users.  <b>Due Date for Data and Associated Lifecycle Assignment delivery to Regulatory Users:</b> Trade Date + 5 8:00 a.m. ET  Used to calculate summaries and present feedback on the CAT Reporter Portal representing events for the same Trade Date, regardless of when the events were reported.
CAT Processing Date	Date representing the set of events reported for a CAT Trading Day. Events reported late to CAT will be assigned the CAT Processing Date reflective of when they were reported. For example, an event, that occurred at 2:00 p.m. ET on T which is reported to CAT after T+1 8 a.m. ET and prior to T+2 @ 8:00 a.m. ET will be	Used to identify late submissions and late repairs.  Used to calculate summaries and present feedback on the CAT Reporter Portal representing events reported on the CAT Processing Date, regardless of the Event Date.

Term	Definition	Usage
	assigned CAT Processing Date of T+1.	
Cycle Date	<p>The exchange's effective business date. "DAY" orders are effective until close of <u>regular</u> business on the Trading Day. Date format YYYYMMDD.</p> <p>This must be a Trade Date.</p>	Used to support linkage.
Order Key Date	The date and time the OrderID was assigned.	<p><i>orderKeyDate</i> is a field defined on Order events, and other events which specify an Order Key.</p> <p>Used to support uniqueness of an Order Key. If time is not needed to guarantee a unique Order Key, the time portion may be populated with zeros.</p>
Trade Key Date	The date and time the TradeID was assigned.	<p><i>tradeKeyDate</i> is a field defined on Trade events.</p> <p>Used to support uniqueness of a Trade Key. If time is not needed to guarantee a unique Trade Key, the time portion may be populated with zeros.</p>
Quote Key Date	The date and time the QuoteID was assigned.	<p><i>quoteKeyDate</i> is a field defined on Quote events.</p> <p>Used to support uniqueness of a Quote Key. If time is not needed to guarantee a unique Quote Key, the time portion may be populated with zeros.</p>

Field Name	Data Type	Description
<b>acceptTime</b>	Time	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Time the trade was accepted by the contra party.
<b>acceptTimestamp</b>	Timestamp	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Date and time the trade was accepted by the contra party.
<b>actionType</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Indicates if this is a new event, a FINRA-initiated correction, or a firm-initiated correction.  <b>Allowed Values</b> <b>NEW</b> New Record <b>COR</b> Correction Record <b>FCOR</b> Firm Correction Record (indicates the FINRA submission of an update or correction of data made by a firm)
<b>askPrice</b>	Price	<i>Event(s): Equity Best Bid and Offer Event (EBBO), Quote (OQ)</i> The price being asked for the option in a quote.
<b>askQuoteID</b>	Text (40)	<i>Event(s): Option Quote (OQ), Option Quote Cancel (OQC)</i> Contains the quote ID for the ask for two-sided quote reporting.
<b>askQty</b>	Unsigned	<i>Event(s): Equity Best Bid and Offer Event (EBBO), Quote (OQ)</i> The quantity being asked for the option in a quote.
<b>asOfFlag</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Indicates as-of trade.  <b>Allowed Values</b> <b>Y</b> Trade Reported As-Of <b>N</b> Trade Reported on Execution Date
<b>assumedExecutionTimestamp</b>	Timestamp	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Date and time the trade is assumed to have been executed based on available information.
<b>Ats</b>	Boolean	<i>Reference Data: Member Alias Detail Entry (MADE)</i> Indicates that the memberAlias is an ATS.
<b>awayExchange</b>	Exchange ID	<i>Event(s): Self-Help Declaration (SHD)</i>

Field Name	Data Type	Description
		Exchange ID of the exchange affected by the self-help event.
<b>bidPrice</b>	Price	<i>Event(s): Equity Best Bid and Offer Event (EBBO), Option Quote (OQ)</i> The price being bid for the option (can be zero in two-sided quote) in a quote event.
<b>bidQty</b>	Unsigned	<i>Event(s): Equity Best Bid and Offer Event (EBBO), Option Quote (OQ)</i> The quantity being bid for the option (can be zero in two-sided quote) in a quote event.
<b>buyDetails</b>	Side Trade Details	<i>Event(s): Order Trade Event, Trade Correction Event, Option Trade Event, Options Trade Correction Event</i> Object in a trade event that contains information for the buy side of the trade. Format and element definitions for Buy Details are described in Trade Side Details. For side trade details for equities, please refer to section 4.5. For side trade details for options, please refer to section 5.2.5.1.
<b>cancellationTimestamp</b>	Timestamp	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Date and time the reporting party cancelled the trade.
<b>cancelQty</b>	Unsigned	<i>Event(s): Order Canceled Event, Options Order Canceled Event</i> The quantity being canceled in Order Cancel Event and Options Order Canceled Event. A value of zero means that the cancel was for the full remaining quantity. For example, if an order for 500 shares had partially executed 200 shares, and then the remainder was canceled, the cancelQty could contain either 300 or 0.
<b>cancelReason</b>	Choice	<i>Event(s): Order Canceled Event, Quote Cancel Event, Options Order Canceled Event</i> Expresses the cancellation reason for a quote or order with one of the below accepted values. Additional values may be added by request.  <b>Allowed Values</b> <b>IOC</b> Immediately canceled <b>EXP</b> Expired <b>REQ</b> Explicit request to cancel the order <b>DIS</b> Session disconnected <b>ALL</b> Market Maker Canceled All Quotes See Technical Specifications for Plan Participants Addendum for Participant Specific values
<b>capacity</b>	Choice	<i>Event(s): Order Accepted Event, Order Route Event, Order Modified Event, Order Trade Event, Order Fill Event, Order Modify Route Event, Order Restatement Event</i> Specifies the capacity of a given order or side of a trade.  <b>Allowed Values</b> <b>Agency</b> <b>Principal</b> <b>RisklessPrincipal</b>  See Technical Specifications for Plan Participants Addendum for Participant Specific values.
<b>carryoverFlag</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Indicates that the trade transaction was carried over (not accepted/declined by the contra firm on T+0) for processing.

Field Name	Data Type	Description
		<b>Allowed Values</b> <b>C</b> Carryover
<b>clearingFirm</b>	Text (10)	<i>Event(s): Stock Leg Order Event, Stock Leg Fill Event</i> The Member Alias of the clearing firm.
<b>clearingFlag</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Clearing and matching specifications of the trade transaction.  <b>Allowed Values</b> <b>A</b> Nasdaq AGU for Clearing <b>C</b> Customer (no matching, no clearing) <b>G</b> Automatic Give Up (Auto Lock-in and Clearing) <b>N</b> No Clearing <b>Q</b> QSR (no matching, no clearing) <b>R</b> Risk Update Only (not sent to clearing) <b>S</b> Self-clearing (no matching, no clearing) <b>U</b> AGU Clearing, Non-risk Eligible <b>Y</b> Clearing  ACT Only: <b>L</b> Do not match; send to clearing (locked-in) received via external system interface only. <b>Z</b> Do not match; send to clearing (locked-in).
<b>clearingNumber</b>	Text (20)	<i>Event(s): Order Trade Event, Order Fill Event, Stock Leg Fill Event</i> DTCC clearing number reported for each side of a stock trade or for the reporting side of a fill event.
<b>clearingPrice</b>	Price	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Trade price inclusive of commissions. This information is only currently available for reported trades to the Nasdaq TRF.
<b>cmtaFirm</b>	Alphanumeric(8)	<i>Event(s): Simple Option Order Accepted Event, Option Order Modified Event, Option Trade Event, Post Trade Allocation Event, Options Order Restatement Event</i> The OCC number of the CMTA firm (only valid for CMTA trades).
<b>complexOptionID</b>	Text (40)	<i>Event(s): Simple Option Order Accepted Event, Option Order Adjusted Event, Stock Leg Order Event, Option Order Modified Event, Stock Leg Modified Event, Option Route Event</i> When present in an event, the complexOptionD will contain the same value as the optionID field from the Complex Order Accepted event to which this event is associated.
<b>complexOrderID</b>	Text (40)	<i>Event(s): Simple Option Order Accepted Event, Option Order Adjusted Event, Stock Leg Order Event, Option Order Modified Event, Stock Leg Modified Event, Option Route Event</i> When present in an event, the complexOrderID identifies the complex option order that is the parent order for an leg orders. Note that this will be the same value as the orderID field from the Complex Order Accepted event.
<b>contraClearingNumber</b>	Unsigned	<i>Event(s): Order Fill Event</i> DTCC clearing number for contra side of a trade.
<b>contraControlNumber</b>	Text (30)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Control Number for the contra party.

Field Name	Data Type	Description
<b>contraEntryFlag</b>	Choice	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Indicates that the contra party is the only side that reported the trade.</p> <p><b>Allowed Values</b></p> <p><b>O</b> Contra Entry</p>
<b>contraExecutingMpid</b>	Member Alias	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> MPID of the contra-side executing party.</p>
<b>contraExecutionTimestamp</b>	Timestamp	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Date and time the contra party reported that the execution took place.</p>
<b>contraReportDate</b>	Date	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Date the contra party reported the trade.</p>
<b>contraReportingObligationFlag</b>	Choice	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Identifies if the contra-side firm had the reporting obligation for the trade under FINRA trade reporting rules.</p> <p><b>Allowed Values</b></p> <p><b>Y</b> Contra Firm Has Reporting Obligation <b>N</b> Contra Firm Does Not Have Reporting Obligation</p>
<b>contraReportTime</b>	Time	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Time the contra party reported the trade.</p>
<b>contraReportTimestamp</b>	Timestamp	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Date and time the contra party reported the trade.</p>
<b>contraSideBranchSequenceIdentifier</b>	Text (20)	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Branch/sequence number of the contra-side firm.</p>
<b>contraSideCapacityCode</b>	Choice	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Capacity of the contra-side firm.</p> <p><b>Allowed Values</b></p> <p><b>A</b> Agency <b>P</b> Principal <b>R</b> Riskless Principal</p>
<b>contraSideClearingNumber</b>	Unsigned	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Clearing number of the firm that cleared the trade for the contra-side firm.</p>
<b>contraSideReportingMpid</b>	Member Alias	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> MPID of the contra-side firm that reported the trade.</p>
<b>contraSideShortSaleCode</b>	Choice	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Identifies a short sale by the contra firm and indicates the type of short.</p> <p><b>Allowed Values</b></p> <p><b>SS</b> Short Sale <b>SX</b> Short Sale Exempt</p>
<b>contraSubmittingEntityId</b>	Text (4)	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Indicates the entity that initiated the submission. For a FINRA-initiated submission on behalf of the firm, this will be 'FNRA'. Otherwise, for a firm-initiated submission, it will</p>

Field Name	Data Type	Description
		<p>be the firm MPID.</p> <p>For NC TRF, NQ TRF and NY TRF, this is always NQTC, NQTR or NYTR.</p> <p>For ADF and ORF it is the MPID of the submitting firm.</p>
<b>controlNumber</b>	Text (30)	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Unique identifier for the reporting side of each trade transaction.</p>
<b>coverage</b>	Choice	<p><i>Event(s): Simple Option Order Accepted Event, Option Order Modified Event, Option Route Event, Complex Option Route (OCOR), Modify Option Route Event, Options Order Restatement Event</i></p> <p>Specifies whether an option order is covered or uncovered. Field may also be filled in as unspecified.</p> <p><b>Allowed Values</b></p> <p><b>Covered</b></p> <p><b>Uncovered</b></p> <p><b>Unspecified</b></p>
<b>cycleDate</b>	Date	<p><i>Event(s): All Options Exchange Events, Note (NOTE), Self-Help Declaration (SHD), Supplemental Trade Event (STE)</i></p> <p>The Trade Date upon which the trading cycle of an event ends. The trading cycle refers to the period of time when an order is eligible to trade and may include one or more trading sessions.</p>
<b>declaredTimestamp</b>	Timestamp	<p><i>Event(s): Self-Help Declaration (SHD)</i></p> <p>Date and time self-help was declared.</p>
<b>declineTime</b>	Time	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Time the trade was declined by the contra party.</p>
<b>declineTimestamp</b>	Timestamp	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Date and time the trade was declined by the contra party.</p>
<b>definedMMDEData</b>	Name Value Pairs	<p><i>Event(s): Market Maker Dictionary Entry (MMDE)</i></p> <p>A list of key/value pairs, providing machine parseable exchange specific regulatory context data for the Equity Market Maker.</p> <p>See Technical Specifications for Plan Participants Addendum for Participant Specific values.</p>
<b>definedNoteData</b>	Name Value Pairs	<p><i>Event(s): Note (NOTE)</i></p> <p>A list of key/value pairs, providing machine parseable data for the notation. The attributes must be defined in this specification.</p> <p>See Technical Specifications for Plan Participants Addendum for Participant Specific values.</p>
<b>desiredLeavesQty</b>	Unsigned	<p><i>Event(s): Order Cancel Route Event, Option Cancel Route Event</i></p> <p>The desired number of shares remaining in the order after the cancel request has been issued for a routed order. A value of zero indicates a full cancel.</p>

Field Name	Data Type	Description
<b>displayPrice</b>	Price	<p><i>Event(s): Order Accepted Event, Order Modified Event, Order Restatement Event, Simple Option Order Accepted Event, Option Order Modified Event, Options Order Restatement Event</i></p> <p>The displayed price for an order.</p>
<b>displayQty</b>	Unsigned	<p><i>Event(s): Order Accepted Event, Order Route Event, Order Modified Event, Order Modify Route Event, Order Restatement Event, Simple Option Order Accepted Event, Stock Leg Order Event, Option Order Modified Event, Stock Leg Modified Event, Option Route Event, Modify Option Route Event, Options Order Restatement Event</i></p> <p>The displayed quantity for an order.</p>
<b>eventTimestamp</b>	Timestamp	<p><i>Event(s): All</i></p> <p>eventTimestamp generally refers to when an event occurred, however this is subjective depending on the event. Refer to the events definitions to see what this timestamp represents within the context of that event.</p>
<b>exchange</b>	Exchange ID	<p><i>Event(s): All Stock Exchange Events, All Options Exchange Events, Supplemental Trade Event (STE), Reject Message Event (RME), Equity Best Bid and Offer Event (EBBO)</i></p> <p>The exchange ID of the exchange associated with the event being reported. Refer to each individual event definition for more specific details.</p>
<b>exchangeInternalID</b>	Text (40)	<p><i>Event(s): Reject Message Event (RME)</i></p> <p>The internal ID assigned to the order or quote by the exchange.</p>
<b>exchOriginCode</b>	Choice	<p><i>Event(s): Simple Option Order Accepted Event, Complex Option Order Accepted Event, Option Order Modified Event, Internal Complex Option Route Event, Option Trade Event, Options Order Restatement Event, Post Trade Allocation Event</i></p> <p>Exchange-specific codes that specify the origin of an order. CAT will map all of these exchange-defined codes to either C - Customer, F - Firm, or M - Market Maker internally. Only the exchange specific codes as defined below need to be included in this field.</p> <p>Below are the accepted values for each exchange, with their description, and their mapping to C, F, or M in CAT in parentheses.</p> <p>Note that some values are marked as "C/M," C/M will map to customer unless an order has mktMkrSubAccount, when it will map to M.</p> <p>See Technical Specifications for Plan Participants Addendum for Participant Specific values.</p>
<b>executingFirm</b>	Alphanumeric(8)	<p><i>Event(s): Simple Option Order Accepted Event, Option Order Modified Event, Option Trade Event, Options Order Restatement Event</i></p> <p>The OCC number of the executing firm.</p>
<b>executionCodes</b>	Name / Value Pairs	<p><i>Event(s): Order Trade Event, Order Fill Event, Trade Correction Event, Option Trade Event, Stock Leg Fill Event, Options Trade Correction Event</i></p> <p>Codes that provide a way to augment executions with specific information about the execution. The Execution Codes field has the same formatting as Order Handling Instructions, where zero or more codes can be entered to provide additional execution information, like where a trade may have been executed on the floor.</p> <p>Each code is separated by a single pipe symbol (ASCII decimal 124, hex 7C). Codes which require a value will include that value immediately after the code Field Name and a single equal sign (ASCII decimal 61, hex 3D). All instructions that apply to the order are to be included.</p> <p><b>Allowed Values: Boolean</b> presence indicates truth</p> <p><b>NonMediaTrade</b> Presence of this instruction on an EOT event indicates that the</p>

Field Name	Data Type	Description
executionCode s (continued)		<p>details of this particular record either went to tape as part of a single-priced trade process, such as an opening or closing auction; or that the details of this event did not go to tape. The use of an EOF event implies that the details were not sent to tape, and this Name/Value pair should not be used on EOF events.</p> <p><b>FLOOR</b> Presence of the value on an Options Trade (OT) event indicates that the trade occurred on the Exchange Floor in Open Outcry. Presence of the value on an Equity Trade (EOT) event indicates that the trade occurred on the Exchange Floor between a Designated Market Maker and/or a single or multiple Brokers.</p> <p><b>PCTPX</b> Indicates that the execution price provided in the price field is specified as a percentage of a benchmark price. For example, price=94.5 indicates that the final dollar price will be 94.5% of a benchmark price. A trade correction (OTC or ETC) event with the final dollar price is required.</p>
		<b>Allowed Values</b>
		<b>AUC</b> If the trade happened as part of an auction, this code identifies the auction by name (e.g., AUC=CROSS)
		<b>ASOF</b> The trade is being reported as- of another date. This option requires a Date value (e.g. ASOF=20171218).
		<b>BulkTradeType</b> Value identifying the aggregate print sent to tape or an opening, re-opening or closing trade as well as the underlying execution reports for all of the orders that executed as part of the single-priced trade event. This value must be reported for all single-priced trade events. Valid Values:
		<ul style="list-style-type: none"> <li><b>O</b> Opening single-priced trade</li> <li><b>H</b> Re-opening single-priced trade</li> <li><b>I</b> IPO single-priced trade</li> <li><b>C</b> Closing single-priced trade</li> <li><b>R</b> Continuous market trade with multiple parties on one or both sides</li> <li><b>N</b> Not related to a single-priced trade event (this value is implied if this Name/Value pair is not provided)</li> </ul>
		<b>BulkTradeID</b> Value that links together the aggregate print sent to tape or an opening, re-opening or closing trade and the underlying execution reports for all of the orders that executed as part of the single-priced trade event.
		<b>childOrderID</b> Requires value, e.g. childOrderID = 123456789
		<b>complexOptionID</b> The optionID specified on the Complex Quote (OCQ) event. Required for trades resulting from Complex Quotes (OCQ events). This value is used for the Complex Quote Key. This optionID is a Text<40> field, and must be a valid option ID included in the reporter's option dictionary (CODE) event.
		<b>CORR</b> Boolean. Indicates that the trade was entered as a correction to a previously reported trade.
		<b>MOOTLINK</b> Required for manual floor trades reported to FINRA CAT as MOOT events. This field contains the identifier that will be used for linkage to the IM MOOT event.
		<b>NOBUYID</b> Indicates that there is neither a quoteID nor an orderID associated with the buy side of the trade.
		<b>NOSELLID</b> Indicates that there is neither a quoteID nor an orderID associated with the sell side of the trade.

Field Name	Data Type	Description
<b>executionCodes</b> (continued)		<p><b>PCTP</b> Executions for FLEXPCT orders are reported, with the price as the final dollar value of the trade. However, the price was determined as a percentage execution. The original trade percentage value is reported using the PCTP execution code, which requires a Numeric(10,8) value, where 94.5% would be reported as PCTP=94.5.</p> <p><b>PCTO</b> Executions for FLEXPCT trades are reported using the optionID of the percentage product. However, the final execution happens with a different optionID that is not percentage based. This final optionID is a Text&lt;40&gt; field, and is reported in the trade with the PCTO execution code (e.g., PCTO=OPTIONID1234).</p> <p><b>PRVRSL</b> Boolean. Indicates that the trade was entered to reverse a partial quantity of a previously reported trade.</p> <p><b>REFTRADEID</b> Required for trades marked as a reversal, partial reversal or correction of a previously reported trade, this field contains the trade being referenced. REFTRADEID must reference a previously reported trade, or a previously reported trade correction that has a matching tradeID.</p> <p><b>REFTRDDATE</b> Required for trades marked as a reversal, partial reversal or correction of a previously reported trade, this field requires a Date value of the original trade date (e.g., REFTRDDATE =20210305)</p> <p><b>RVRSL</b> Boolean. Indicates that the trade was entered to reverse a previously reported trade in its entirety.</p> <p>See Technical Specifications for Plan Participants Addendum for Participant Specific values.</p>
<b>executionDate</b>	Date	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Date the execution occurred.</p>
<b>executionPrice</b>	Price	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Unit price of the trade.</p>
<b>executionQuantity</b>	Unsigned	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Number of shares traded.</p>
<b>executionTimestamp</b>	Timestamp	<p><i>Event(s): Order Trade Correction, Option Trade Correction</i></p> <p>When a trade is reported, the time of the trade is reported as the eventTimestamp. The executionTimestamp is used in a correction event if the time of the trade needs to be changed.</p> <p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Date and time the execution occurred.</p>
<b>exerciseStyle</b>	American	<p><i>Reference Data: Option Series Dictionary Entry (OSDE)</i></p> <p>Specifies the exercise style of the Option Series in Simple Option Series Dictionary Entry.</p> <p><b>Allowed Values</b></p> <p><b>American</b></p> <p><b>European</b></p>
<b>expirationDate</b>	Date	<p><i>Reference Data: Option Series Dictionary Entry (OSDE)</i></p> <p>The date an options contract will expire, taking the format: YYYYMMDD.</p>
<b>explicitFeeFlag</b>	Choice	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Indicates if a Clearing Price was entered.</p>

Field Name	Data Type	Description
		<b>Allowed Values</b> <b>Y</b> Explicit Fee Trade
<b>fillID</b>	Text (40)	<i>Event(s): Supplemental Trade Event (STE), Order Fill Event, Stock Leg Fill Event</i> A unique identifier for the transaction. The combination of reporter, date, symbol, side, and fillID should be unique.
<b>finraContraControlNumber</b>	Text (30)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Control Number used for interaction between TRFs and FINRA; populated only when trade is matched by comparison. Will be unique for a trade report date and market center.
<b>finraControlDate</b>	Date	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Control Date of the current version of the trade.
<b>finraControlNumber</b>	Text (30)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Control Number of the current version of the trade.
<b>finraTradeModifierLateCode</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> System Trade Modifier - Time Modifier - Updated by MPP Engine.  <b>Allowed Values</b> <b>T</b> Executed Outside Normal Market Hours <b>U</b> Executed Outside Normal Market Hours and Reported Late <b>Z</b> Executed During Normal Market Hours and Reported Late
<b>finraTradeModifierSroCode</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> System Trade Modifier SRO - Updated by MPP System.  <b>Allowed Values</b> <b>B</b> Weighted Average Price for Trade Disseminated to CTA SIP <b>I</b> Odd Lot Trade <b>P</b> Prior Reference Price <b>V</b> Contingent Trade <b>W</b> Weighted Average Price for Trade Disseminated to UTP SIP <b>X</b> Exercise of OTC Option
<b>finraTradeModifierThroughExemptTime</b>	Time	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> System Trade Thru Exempt Modifier Time.
<b>firmOriginalTrfControlNumber</b>	Text (30)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Original Control Number provided by the TRF to the firm.
<b>firmTradeModifierLateCode</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> System Trade Modifier - Time Modifiers (TradeModifier 3 in the FIX Spec).  <b>Allowed Values</b> <b>T</b> Executed Outside Normal Market Hours <b>U</b> Executed Outside Normal Market Hours and Reported Late <b>Z</b> Executed During Normal Market Hours and Reported Late
<b>firmTradeModifierSettlementTypeCode</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> User Trade Modifier - Settlement Type (Settlement modifiers).

Field Name	Data Type	Description
<b>firstTradeFinraContraControlNumber</b>	Text (30)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Control Number of the first trade in a chain of corrections on the contra side trade report.
<b>firstTradeFinraControlDate</b>	Date	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Control Date of the first version of the trade.
<b>firstTradeFinraControlNumber</b>	Text (30)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Control Number of the first version of the trade.
<b>floorBroker</b>	Member Alias	<i>Event(s): Option Trade Event</i> The Member Alias of the executing floor broker.
<b>groupID</b>	Text (40)	<i>Reference Data: Complex Option Dictionary Entry (CODE)</i> An identifier supplied by the user/reporter.
<b>haltActionCode</b>	Choice	<i>Event(s): FINRA Halt/Resume (FHR)</i> Indicates the action being taken.  <b>Allowed Values</b> <div> <div>H</div> <div>Trading Halt</div> </div> <div> <div>Q</div> <div>Quotation Resumption</div> </div> <div> <div>T</div> <div>Trading Resumption</div> </div> <div> <div>X</div> <div>Quotation and Trading Resumption</div> </div>
<b>haltActionTimeStamp</b>	Timestamp	<i>Event(s): FINRA Halt/Resume (FHR)</i> The date/time the halt was initiated.
<b>haltMessageType</b>	Choice	<i>Event(s): FINRA Halt/Resume (FHR)</i> Identifies the message format, in conjunction with the <code>messageCategory</code> .  <b>Allowed Values</b> <div> <div>2</div> <div>Closing Trade Summary</div> </div> <div> <div>A</div> <div>General Administrative Message</div> </div> <div> <div>H</div> <div>Trading Action (Security)</div> </div> <div> <div>M</div> <div>Trading Action (Extraordinary Market)</div> </div>
<b>haltReasonCode</b>	Choice	<i>Event(s): FINRA Halt/Resume (FHR)</i> Indicates the reason for the halt/resume.  <b>Allowed Values</b> <div> <div>C11</div> <div>Trade Halt Concluded by Other Regulatory Authority; Quotes/Trades to Resume</div> </div> <div> <div>C13</div> <div>Quote Only Resume for EMC and MWCB Quote</div> </div> <div> <div>C14</div> <div>Quote and Trade Resume for EMC and MWCB</div> </div> <div> <div>CXL</div> <div>Cancel</div> </div> <div> <div>D1</div> <div>Security Deleted from OTCE</div> </div> <div> <div>H10</div> <div>Halt - SEC Trading Suspension</div> </div> <div> <div>H12</div> <div>Halt - SEC Revocation</div> </div> <div> <div>O1</div> <div>Halt - Component/Derivative of Exchange-Listed Security</div> </div> <div> <div>T3</div> <div>Halt – News and Resumption Times</div> </div> <div> <div>U1</div> <div>Halt – Foreign Market/Regulatory</div> </div> <div> <div>U2</div> <div>Halt – Component/Derivative of Exchange-Listed Security</div> </div>

Field Name	Data Type	Description
		<div><div>U3Halt – Extraordinary Events</div><div>U4Extraordinary Market Condition (EMC)Halt</div><div>U5Market-wide Circuit Breaker Halt</div></div>
handlingInstructions	Name / Value Pairs	<div><div>Event(s): Order Accepted Event, Order Route Event, Order Modified Event, Order Modify Route Event, Order Restatement Event, Simple Option Order Accepted Event, Complex Option Order Accepted Event, Complex Option Order Modified Event, Stock Leg Order Event, Option Order Modified Event, Stock Leg Modified Event, Option Route Event, Complex Option Route (OCOR), Modify Option Route Event, Options Order Restatement Event</div><div>The order handling instructions field is a way to provide multiple instruction codes in a somewhat flexible manner. This field will contain zero or more order instruction codes, each separated by a single pipe symbol (ASCII decimal 124, hex 7C). Codes which require a value will include that value immediately after the code Field Name and a single equal sign (ASCII decimal 61, hex 3D).</div><div>All instructions that apply to the order are to be included.</div><div>Allowed Values: Boolean presence indicates truth</div><div><div>AONAll or None</div><div>AUCAuction Eligible</div><div>DNRDo Not Route</div><div>FOKFill or Kill</div><div>IOCImmediate or Cancel</div><div>ISBIntermarket Sweep Book</div><div>ISOIntermarket Sweep</div><div>NHNot Held</div><div>OPGAt the Opening</div><div>PSOPost Only</div><div>WTPWash Trade Prevention</div></div><div>Note: Some exchanges have special values to indicate handling of ISO orders. All ISO orders must be marked with the boolean ISO value. Thus, if an exchange denotes an ISO order with some custom attribute, it must also be marked with the common ISO value.</div><div>Allowed Values: Name Value Pairs</div><div><div>MINMinimum Quantity - requires an Integer value, representing the minimum quantity allowed to be executed in a single transaction (e.g., MIN=1000).</div><div>WDWith Discretion Price - requires a Numeric value, representing the discretion price (e.g, WD=12.50)</div><div>STPStop Price - requires a Numeric value representing the stop price (e.g., STP=17.95)</div><div>XDATEExpire Date - requires a Date value, representing the date that the order expires. The value must be in Date format (e.g., May 15, 2017 would be XDATE=20170515). The order expires at the close of the specified date.</div><div>XTIMEExpire Time - requires a Time value, representing the time that the order expires. The value must be in a valid Timestamp format.</div><div>R2ERoute to Exchange - requires Exchange ID (e.g., R2E=G). The desired route destination is not the party receiving the actual route. The party receiving the route does not have discretion as to</div></div></div>
handlingInstructions (continued)		

Field Name	Data Type	Description
		<p>where to route the order. It must be routed to a specific exchange.</p> <p><b>R2M</b> Route to Industry Member - requires Member Alias (e.g., R2E=ABC123). The desired route destination is not the party receiving the actual route. The party receiving the route does not have discretion as to where to route the order. It must be routed to a specific industry member.</p> <p><b>R2O</b> Route to Other - requires Text(20) (e.g., R2O=Somebody). The desired route destination is not the party receiving the actual route. The party receiving the route does not have discretion as to where to route the order. It must be routed to an entity who is neither an exchange nor an industry member (i.e., the entity does not have a CAT reporting responsibility).</p> <p>See Technical Specifications for Plan Participants Addendum for Participant Specific values.</p>
<b>ID</b>	Text (20)	<p><i>Reference Data: Member Dictionary Entry (MDE), Member Alias Detail Entry (MADE)</i></p> <p>The CRD number of the firm.</p>
<b>initiator</b>	Choice	<p><i>Event(s): Order Modified Event, Order Canceled Event, Option Quote Event, Option Quote Cancel Event, Option Order Modified Event, Complex Option Order Modified Event, Stock Leg Modified Event, Option Order Canceled Event</i></p> <p>Indicates who initiated a cancel or modification request. If an order/quote is implicitly modified or canceled via an unsolicited action (e.g., peg order price change or cancelation due to timeout), then the initiator is the exchange itself.</p> <p>If an order/quote is modified or canceled as a result of an explicit request from the party that sent the order/quote, then the initiator is the firm/market maker that sent the explicit modify/cancel request.</p> <p>Thus, all explicit modify/cancel requests will have an initiator of either Firm or MarketMaker, as appropriate and all implicit, unsolicited modify/cancel actions will have an initiator of Exchange.</p> <p><b>Allowed Values</b></p> <p><b>Firm</b></p> <p><b>Exchange</b></p> <p><b>MarketMaker</b></p>
<b>intendedMarketCenter</b>	Choice	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Intended Market Center.</p> <p><b>Allowed Values</b></p> <p><b>D</b>      <b>ADF</b></p>
<b>isGloballyUnique</b>	Boolean	<p><i>Event(s): Complex Option Accepted (OCA), Complex Option Route (OCOR), Complex Option Internal Route (OCIR)</i></p> <p>Indicates that the orderID is globally unique across all optionIDs for the exchange/date. This means that no other complex order can have the same orderID. Furthermore, leg events for this complex order must be reported with just the complexOrderID and not the complexOptionID.</p>
<b>issueID</b>	Integer	<p><i>Event(s): FINRA Halt/Resume (FHR)</i></p> <p>Indicates the issue being halted/resumed.</p>
<b>issueSymbolID</b>	Symbol	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p>

Field Name	Data Type	Description
		Character symbol of the traded issue.
<b>kind</b>	Choice	<p><i>Reference Data: Option Series Dictionary Entry (OSDE), Complex Option Dictionary Entry (CODE)</i></p> <p>Specifies if an option is a simple, complex, flex, or percentage denominated flex option. For the value FLEXPCT, the strike price and order prices of the option are in percentages.</p> <p><b>Allowed Values</b></p> <p><b>Complex</b>  <b>Standard</b>  <b>Non-Standard</b>  <b>FLEX</b>  <b>FLEXPCT</b></p>
<b>lastUpdateDate</b>	Date	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Date the record was last updated.</p>
<b>lastUpdateTime</b>	Timestamp	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Date and time the record was last updated.</p>
<b>leavesQty</b>	Unsigned	<p><i>Event(s): Order Canceled Event, Order Trade Event, Order Fill Event, Order Cancel Route Event, Order Restatement Event, Option Order Canceled Event, Option Cancel Route Event, Option Trade Event, Stock Leg Fill Event, Options Order Restatement Event</i></p> <p>The quantity remaining unfilled after the event. The meaning of this field is subjective depending on the event, refer to each individual event definition for more detail.</p>
<b>legType</b>	Choice	<p><i>Reference Data: Complex Option Dictionary Entry (CODE)</i></p> <p>For a Complex Option Dictionary Entry, this field defines the type of each leg.</p> <p><b>Allowed Values</b></p> <p><b>Equity</b>  <b>Index</b>  <b>Option</b></p>
<b>liquidityCode</b>	Choice	<p><i>Event(s): Order Trade Event, Option Trade Event</i></p> <p>Included in the side trade details for options and equity trade events, represents whether a given side was adding or removing liquidity.</p> <p><b>Allowed Values</b></p> <p><b>Added</b>  <b>Removed</b>  <b>RoutedOut</b>  <b>Opening-ReopeningAuction</b>  <b>ClosingAuction</b>  <b>CrossOrderExecution</b>  <b>Other</b></p> <p>See Technical Specifications for Plan Participants Addendum for Participant Specific values.</p>
<b>lockedCrossOv errideFlag</b>	Boolean	<p><i>Event(s): Equity Best Bid and Offer (EBBO)</i></p> <p>Identifies whether a quote should be considered valid even if it will lock or cross the</p>

Field Name	Data Type	Description
		<p>market.</p> <p>'True' indicates that the quote is still valid</p> <p>'False' indicates that the quote is not valid if it locks or crosses.</p>
<b>lockedInFlag</b>	Choice	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Locked-in flag.</p> <p><b>Allowed Values</b></p> <p><b>A</b> Automatic Give Up (trade report on another firm's behalf)</p> <p><b>Q</b> Qualified Special Representative (trade sent to clearing on another firm's behalf)</p> <p><b>Y</b> Locked-in Trade</p>
<b>lockedInTradeTimestamp</b>	Timestamp	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Date and time the locked-in trade report was received by the reporting facility.</p>
<b>marketCenterId</b>	Choice	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Reporting facility to which the trade was reported.</p> <p><b>Allowed Values</b></p> <p><b>C</b> Nasdaq TRF Chicago</p> <p><b>D</b> ADF-TRF</p> <p><b>N</b> NYX-TRF</p> <p><b>L</b> Nasdaq-TRF</p> <p><b>O</b> OTC-TRF (ORF)</p> <p><i>Event(s): Equity Best Bid and Offer (EBBO)</i></p> <p>Display-Only Facility on which the quote was displayed.</p> <p><b>Allowed Values</b></p> <p><b>ADF</b> ADF Quote Display Facility</p>
<b>marketCenterOriginatorID</b>	Choice	<p><i>Event(s): FINRA Halt/Resume (FHR)</i></p> <p>Identifies the market center or system that originated the halt/resume action.</p> <p><b>Allowed Values</b></p> <p><b>E</b> Market Center Independent (Message Generated by Data Feed Handler)</p> <p><b>F</b> OTC Bulletin Board (OTCBB) and Other OTC Security</p> <p><b>U</b> OTC Bulletin Board (OTCBB)</p> <p><b>u</b> Other OTC Security (OOTC)</p>
<b>marketMaker</b>	Member Alias	<p><i>Event(s): Quote Event (OQ), Quote Cancel Event</i></p> <p><i>Reference Data: Market Maker Dictionary Entry (MMDE)</i></p> <p>The Member Alias assigned by the SRO as identified in the Member Dictionary Entry (MDE) memberAliases field. In the case where a market maker has multiple users (e.g., acronyms used to differentiate users within the same MM), there would be a separate Member Alias given to each user or sub-account.</p>

Field Name	Data Type	Description
<b>marketMakerStatus</b>	Choice	<p><i>Reference Data: Market Maker Dictionary Entry (MMDE)</i> The status of the member/symbol for the reporting date.</p> <p><b>Allowed Values</b></p> <p><b>Active</b>           Market Maker becomes active in the symbol <b>Inactive</b>          Market Maker has become inactive in the symbol</p>
<b>marketMakerType</b>	Choice	<p><i>Reference Data: Market Maker Dictionary Entry (MMDE)</i> A list of exchange defined values for the Equity Market Maker distinguishing between types or designations of market makers. Below are the common allowed values that are available to all exchanges.</p> <p><b>Allowed Values</b></p> <p><b>MM</b>                Market Maker (<i>default value</i>) <b>DMM</b>             Designated Market Maker <b>LMM</b>             Lead Market Maker <b>SLP</b>             Secondary Liquidity Provider <b>SLMM</b>            Secondary Liquidity Market Maker</p>
<b>mediaReportedFlag</b>	Choice	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Identifies if the trade was media reported or not (could differ from the publishIndicatorCode for odd lot trades).</p> <p><b>Allowed Values</b></p> <p><b>Y</b>                Media Reported <b>N</b>                Not Media Reported</p>
<b>memberAlias</b>	Member Alias	<p><i>Reference Data: Member Alias Detail Entry (MADE)</i> The member alias for which the MADE record is being reported.</p>
<b>memberAliases</b>	Array of Member Alias	<p><i>Reference Data: Member Dictionary Entry (MDE)</i> A list of member aliases for an SRO member.</p>
<b>messageCategory</b>	Choice	<p><i>Event(s): FINRA Halt/Resume (FHR)</i> Identifies the message format, in conjunction with the haltMessageType.</p> <p><b>Allowed Values</b></p> <p><b>A</b>                Administrative Messages <b>C</b>                System Control Messages <b>T</b>                Trade Related Messages</p>
<b>messageSequenceNumber</b>	Integer	<p><i>Event(s): FINRA Halt/Resume (FHR)</i> At the beginning of each operational cycle, this number will be set to 00000000 (for the Start of Day) for each data channel.</p>
<b>messageTimestamp</b>	Timestamp	<p><i>Event(s): FINRA Halt/Resume (FHR)</i> The date/time of the corresponding action (halt/resume).</p>
<b>mktMkrSubAccount</b>	Text (20)	<p><i>Event(s): Simple Option Order Accepted Event, Option Order Modified Event, Option Trade Event, Option Order Restatement Event, Post Trade Allocation Event</i> The sub-account for the market maker. This is a text field and will be treated as pass through data - not validated.</p>
<b>name</b>	Text	<p><i>Reference Data: Member Alias Detail Entry (MADE)</i></p>

Field Name	Data Type	Description
		The doing-business-as (DBA) name corresponding to the member alias.
<b>nbbPrice</b>	Price	<p><i>Event(s): Order Accepted, Order Route, Order Modified, Order Trade, Order Modify Route, Simple Option Order Accepted, Stock Leg Order, Option Order Modified, Stock Leg Modified, Option Route, Modify Option Route, Simple Option Trade</i></p> <p>The national best bid price at the moment the event. If the event changes the NBBO, this is the national best bid price before the change effected by the event, in this sense, this field is always the national best bid price immediately before the event occurs. See this field in context of the event definitions for more info.</p>
<b>nbbQty</b>	Unsigned	<p><i>Event(s): Order Accepted, Order Route, Order Modified, Order Trade, Order Modify Route, Simple Option Order Accepted, Stock Leg Order, Option Order Modified, Stock Leg Modified, Option Route, Modify Option Route, Simple Option Trade</i></p> <p>The national best bid quantity at the moment the event. If the event changes the NBBO, this is the national best bid quantity before the change effected by the event, in this sense, this field is always the national best bid quantity immediately before the event occurs. See this field in context of the event definitions for more info.</p>
<b>nboPrice</b>	Price	<p><i>Event(s): Order Accepted, Order Route, Order Modified, Order Trade, Order Modify Route, Simple Option Order Accepted, Stock Leg Order, Option Order Modified, Stock Leg Modified, Option Route, Modify Option Route, Simple Option Trade</i></p> <p>The national best offer price at the moment the event. If the event changes the NBBO, this is the national best offer price before the change effected by the event, in this sense, this field is always the national best offer price immediately before the event occurs. See this field in context of the event definitions for more info.</p>
<b>nboQty</b>	Unsigned	<p><i>Event(s): Order Accepted, Order Route, Order Modified, Order Trade, Order Modify Route, Simple Option Order Accepted, Stock Leg Order, Option Order Modified, Stock Leg Modified, Option Route, Modify Option Route, Simple Option Trade</i></p> <p>The national best offer quantity at the moment the event. If the event changes the NBBO, this is the national best offer quantity before the change effected by the event, in this sense, this field is always the national best offer quantity immediately before the event occurs. See this field in context of the event definitions for more info.</p>
<b>noLinkControl Number</b>	Text (30)	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Provides a link (via Control Number) to previous No transaction.</p>
<b>note</b>	Text (255)	<p><i>Event(s): Note (NOTE)</i></p> <p>Free form text provided by the exchange to describe the notation of the event.</p>
<b>noteType</b>	Choice	<p><i>Event(s): Note (NOTE)</i></p> <p>For a note event, classifies the type of note.</p> <p><b>Allowed Values</b></p> <p><b>MISC</b></p> <p>See Technical Specifications for Plan Participants Addendum for Participant Specific values.</p>
<b>noWasLinkNumber</b>	Text (30)	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Link to first No transaction</p>
<b>oeMemoTx</b>	Text (10)	<p><i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i></p> <p>Memo text entered by firm.</p>
<b>onlyOneQuote</b>	Boolean	<p><i>Event(s): Quote Event (OQ), Quote Cancel Event</i></p> <p>True if the system allows only one quote for the particular market maker; false otherwise.</p>

Field Name	Data Type	Description
<b>openCloseIndicator</b>	Choice	<p><i>Event(s): Simple Option Order Accepted, Options Modified, Post Trade Allocation, Options Restatement or sideDetail of Option Trade events. (When this field is present in the sideDetails of an options trade event, it is applicable only when the side of the trade is an order)</i></p> <p>Indicates the position of the order.</p> <p><b>Allowed Values:</b></p> <p><b>Open</b></p> <p><b>Close</b></p> <p><b>Unspecified</b></p>
<b>optionID</b>	Text (40)	<p><i>Reference Data: Option Series Dictionary Entry (OSDE), Complex Option Dictionary Entry (CODE)</i></p> <p><i>Event(s): All events for Options Exchanges, Note (NOTE), Supplemental Trade Event (STE), Reject Message Event (RME)</i></p> <p>The unique ID assigned to this option by the reporter. None of any two simple/complex/flex options should receive the same ID.</p>
<b>optionsSymbol</b>	Text (14)	<p><i>Reference Data: Option Series Dictionary Entry (OSDE)</i></p> <p>The option class or symbol for the series (as known by OCC).</p>
<b>orderAttributes</b>	Name/Value Pairs	<p><i>Event(s): Order Accepted, Order Modified, Order Restatement, Simple Option Order Accepted, Complex Option Order Accepted, Complex Option Order Modified, Stock Leg Order, Option Order Modified, Complex Order Modified, Stock Leg Modified, Option Order Restatement</i></p> <p>The order attributes field is a way to provide attributes of an order that are not necessarily the same as handling instructions.</p> <p>For example, the rank price of an order, or the participant with the best bid.</p> <p><b>Allowed Values</b></p> <p><b>childOrderID</b> Requires value, e.g. childOrderID = 123456789</p> <p><b>FBT</b> Floor Broker Trade; Boolean value where presence indicates that the event is the result of a Floor Broker Trade. This can be used by an exchange to report an OOA event when a floor trade is executed. Firms are not currently required to report the corresponding event. The result is linkage errors that cannot be repaired. The presence of this flag will exclude the event from linkage feedback and error rate calculation until such time as the corresponding events are required to be submitted by the firm.</p> <p><b>NBBPAR</b> Participant at the best bid - requires a Participant ID, representing the participant at the best bid (e.g. NBBPAR=Par1)</p> <p><b>NBOPAR</b> Participant at the best offer - requires a Participant ID, representing the participant at the best bid (e.g. NBOPAR=Par1)</p> <p><b>pairedOrderId</b> Requires Text(40). In addition to the standard Text data type restrictions, Participants should avoid using the "at symbol," @ (ASCII decimal 64, hex 40). Participant-provided value that that will be present on the OOA, OCOA, OOM and OCOM events that are part of a customer-submitted cross order. The pairedOrderId must uniquely identify the paired orders within the Trade Date and Exchange.</p> <p><b>PCTPX</b> Indicates that the limit price provided in the price field of the order is specified as a percentage of a benchmark price. For example, price=94.5 indicates that the final dollar price of the trade should be 94.5% of a benchmark price. <b>replacedOrderDate</b> Used when a new order is entered to replace a previously entered erroneous order. Reference to a date of a previously reported order that has a</p>

Field Name	Data Type	Description																												
orderAttributes (continued)		<div>matching orderID. Requires a Date value, e.g. replacedOrderDate =20210930</div> <div><b>replacedOrderID</b>      Used when a new order is entered to replace a previously entered erroneous order. Reference to a previously reported order that has a matching orderID. Requires a Text(40) value, e.g. replacedOrderID = 123456789ABC</div> <div><b>RNKP</b>      Rank Price - requires a Price value, representing the price used to rank the order in the book (e.g., RNKP=10.25).</div> <div>See Technical Specifications for Plan Participants Addendum for Participant Specific values.</div>																												
orderID	Text (40)	<div>Event(s): Order Accepted, Route, Modified, Canceled, Trade (sideDetails), Fill, Cancel Route, Modify Route and Restatement events, Simple Option Order Accepted, Complex Option Order Accepted, Stock Leg Order, Option Route, Complex Option Route (OCOR), Option Order Modified, Complex Option Order Modified, Option Order Canceled, Modify Option Route, Option Cancel Route, Simple Option Trade, Stock Leg Fill, Option Order Restatement and Options Post Trade Allocation events, Note (NOTE)</div> <div>The internal order ID assigned to the order by the exchange.</div>																												
orderType	Choice	<div>Event(s): Order Accepted, Order Routed, Order Modified, Order Restatement, Order Modify Route, Simple Option Order Accepted, Complex Option Order Accepted, Stock Leg Order, Option Order Modified, Complex Option Order Modified, Option Route, Option Order Restatement, Modify Option Route events</div> <div>The order type defines the type of order being placed, and must be exactly one of the permitted values. <b>previousTradeFinraControlDate</b>	Date	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Control Date of the previous trade in a chain of corrections on the contra side trade report.
<b>previousTradeFinraControlNumber</b>	Text (30)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Control Number of the previous trade in a chain of corrections on the contra side trade report.
<b>previousTradeFinraControlDate</b>	Date	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> FINRA Control Date of the previous version of the trade.
<b>previousTradeFinraControlNumber</b>	Text (30)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> FINRA Control Number of the previous version of the trade.
<b>priceOverrideCode</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Identifies if a price validation test was overridden when the trade was entered into ACT. (When trades are entered into ACT, they are validated for reasonableness against a Price Validation Table. The Price Override widens the validation range).

Field Name	Data Type	Description
		<b>Allowed Values</b> <b>O</b> Subscriber Override* <b>V</b> Supervisory Contract Override <b>X</b> Supervisory Override *(default) Value set by the ACT System for all CQS Issues if not "X" or "V"
<b>price</b>	Price	<i>Event(s): Order Accepted, Route, Modified, Modify Route or Restatement events, Simple Option Order Accepted, Complex Option Order Accepted, Stock Leg Order, Option Order Modified, Complex Option Order Modified, Option Route, Complex Option Route (OCOR), Modify Option Route, Option Order Restatement</i> The limit price of the order. For a complex option, this is the net price of the order, which can be either positive, negative, or zero. <i>Event(s): Order Trade, Order Fill, Trade Break, Trade Correction</i> Trade/fill price of the trade/fill. <i>Event(s): Post Trade Allocation</i> The price of the allocation.
<b>primaryDeliverable</b>	Symbol	<i>Reference Data: Option Series Dictionary Entry (OSDE)</i> The symbol for the primary deliverable component of the option, in the symbology of the listing exchange for that symbol. Alternatively, if a symbol dictionary is provided, a valid alias could be used.
<b>publishIndicatorCode</b>	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Identifies if the trade is media reportable or not (could differ from the mediaReportedFlag for odd lot trades). <b>Allowed Values</b> <b>Y</b> Media Report Eligible <b>N</b> Not Media Report Eligible
<b>putCall</b>	Choice	<i>Reference Data: Option Series Dictionary Entry (OSDE)</i> Specifies if this simple option or option leg is a put or call. <b>Allowed Values</b> <b>Put</b> <b>Call</b>
<b>quantity</b>	Unsigned	<i>Event(s): Order Accepted, Route, Modified, Canceled, Trade, Fill, Modify Route, Order Restatement events; Simple Option Order Accepted, Complex Option Order Accepted, Stock Leg Order, Option Order Modified, Complex Option Order Modified, Stock Leg Modified, Option Route, Complex Option Route (OCOR), Option Order Canceled, Simple Option Trade, Stock Leg Fill, Modify Option Route, Option Order Restatement events</i> The quantity of the order.
<b>quoteCondition</b>	Text (8)	<i>Event(s): Equity Best Bid and Offer Event (EBBO)</i> Indicator used to determine whether a quote is eligible to participate in the NBBO.
<b>quoteID</b>	Text (40)	<i>Event(s): Note (NOTE), Equity Best Bid and Offer Event (EBBO), Options Quote, Quote Cancel, and Options Trade (sideDetails) events</i> The ID assigned to this quote by the exchange to uniquely identify the quote. For two-sided quote reporting where each side has its own quote ID, this will be the buy side quote ID.

Field Name	Data Type	Description																
quoteInstructions	Name/Value Pairs	<i>Event(s): Equity Best Bid and Offer Event (EBBO)</i> Represents any additional instructions or attributes for the quote.  <b>Allowed Values</b> <i>Codes to be provided.</i>																
ratio	Unsigned	<i>Reference Data: Complex Option Dictionary Entry (CODE)</i> The ratio quantity of a complex option leg, relative to other legs. Ratios must already be reduced to the smallest units possible.																
reason	Text (255)	<i>Event(s): Trade Break, Trade Correction, Option Trade Break, Option Trade Correction, Post Trade Allocation</i> Free format text field, with reason for the trade break or correction.																
recordLoadDate	Date	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Date the record was created.																
recordUniqueIdentifier	Text (31)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> FINRA-assigned unique identifier for each Reported Trade record.																
referenceNumber	Text (20)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> User-defined trade reference number.																
referenceReportingFacility	Text (6)	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> Reference Reporting Facility.																
rejectContext	Name/Value Pairs	<i>Event(s): Reject Message Event (RME)</i> A list of key/value pairs, providing machine parseable data for the notation. The attributes are not defined in the spec, and can be any values as long as they conform to the format for a list of name/value pairs. Any additional information can be provided in this field. For example, the entire rejected message in Tag=Value format.																
rejectReason	Choice	<i>Event(s): Reject Message Event (RME)</i> Code representing the reason why the order was rejected. Codes are exchange-specific.  <i>The following values will be effective in the Production environment on December 5, 2022, in conjunction with the availability of the Reject Message Event.</i>  See Technical Specifications for Plan Participants Addendum for Participant Specific values.																
relatedMarketCenterId	Choice	<i>Event(s): FINRA TRF/ORF/ADF Transaction Data (TRF)</i> For the non-tape "riskless" leg of a riskless principal transaction, the facility or market where the first leg of the transaction was reported.  <b>Allowed Values</b> <table><tr><td>0</td><td>ADF/ORF</td></tr><tr><td>1</td><td>Nasdaq TRF</td></tr><tr><td>2</td><td>FINRA/Nasdaq TRF Chicago</td></tr><tr><td>3</td><td>NYSE TRF</td></tr><tr><td>A</td><td>NYSE American, LLC</td></tr><tr><td>B</td><td>Nasdaq BX</td></tr><tr><td>C</td><td>NYSE National, Inc</td></tr><tr><td>E</td><td>MEMX Exchange</td></tr></table>	0	ADF/ORF	1	Nasdaq TRF	2	FINRA/Nasdaq TRF Chicago	3	NYSE TRF	A	NYSE American, LLC	B	Nasdaq BX	C	NYSE National, Inc	E	MEMX Exchange

Field Name	Data Type	Description
<b>saleCondition</b> <i>(continued)</i>		<b>F</b> Transaction is a late report of the opening trade and is out of sequence; i.e., other transactions have been reported for the particular option contract.
		<b>G</b> Transaction was the only one reported this day for the particular option contract and is now to be canceled.
		<b>H</b> Transaction is a late report of the opening trade, but is in the correct sequence; i.e., no other transactions have been reported for the particular option contract.
		<b>I</b> Transaction was executed electronically. Prefix appears solely for information; process as a regular transaction.
		<b>J</b> Transaction is a reopening of an option contract in which trading has been previously halted. Prefix appears solely for information; process as a regular transaction.
		<b>S</b> Transaction was the execution of an order identified as an Intermarket Sweep Order. Process like normal transaction.
		<b>a</b> Transaction was the execution of an electronic order which was "stopped" at a price and traded in a two sided auction mechanism that goes through an exposure period. Such auctions mechanisms include and not limited to Price Improvement, Facilitation or Solicitation Mechanism.
		<b>b</b> Transaction was the execution of an Intermarket Sweep electronic order which was "stopped" at a price and traded in a two sided auction mechanism that goes through an exposure period. Such auctions mechanisms include and not limited to Price Improvement, Facilitation or Solicitation Mechanism marked as ISO.
		<b>c</b> Transaction was the execution of an electronic order which was "stopped" at a price and traded in a two sided crossing mechanism that does not go through an exposure period. Such crossing mechanisms include and not limited to Customer to Customer Cross and QCC with a single option leg.
		<b>d</b> Transaction was the execution of an Intermarket Sweep electronic order which was "stopped" at a price and traded in a two sided crossing mechanism that does not go through an exposure period. Such crossing mechanisms include and not limited to Customer to Customer Cross.
		<b>e</b> Transaction represents a non-electronic trade executed on a trading floor. Execution of Paired and Non-Paired Auctions and Cross orders on an exchange floor are also included in this category.
		<b>f</b> Transaction represents an electronic execution of a multi leg order traded in a complex order book
		<b>g</b> Transaction was the execution of an electronic multi leg order which was "stopped" at a price and traded in a two sided auction mechanism that goes through an exposure period in a complex order book. Such auctions mechanisms include and not limited to Price Improvement, Facilitation or Solicitation Mechanism.
		<b>h</b> Transaction was the execution of an electronic multi leg order which was "stopped" at a price and traded in a two sided crossing mechanism that does not go through an exposure period. Such crossing mechanisms include and not limited to Customer to Customer Cross and QCC with two or more options legs.
		<b>i</b> Transaction represents a non-electronic multi leg order trade executed against other multi-leg order(s) on a trading floor. Execution of Paired and Non-Paired Auctions and Cross orders on an exchange floor are also included in this category.
		<b>j</b> Transaction represents an electronic execution of a multi Leg order traded against single leg orders/ quotes.
		<b>k</b> Transaction was the execution of an electronic multi leg stock/options

<b>undefinedNote Data</b>	Name/Value Pairs	<i>Event(s): Note (NOTE)</i> A list of key/value pairs, providing machine parseable data for the notation in a Note Event. The attributes are not defined in the specs, and can be any values as long as they conform to the format for a list of name/value pairs.
<b>underlyingType</b>		<i>Reference Data: Option Series Dictionary Entry (OSDE)</i> This field specifies whether a simple option series has an equity or index as its underlying. The underlying type mapping is consistent with the same mapping used at OCC (e.g., ETF is treated as Equity and WCO is treated as Index).  <b>Allowed Values</b> <b>Equity</b> <b>Index</b>
<b>version</b>	Version	This is a data type, not a field. Digits and decimals are the only allowed characters. The first character must be a digit group followed by any number of optional pairs of

Field Name	Data Type	Description
		decimals and digit groups.
<b>workingPrice</b>	Price	<i>Event(s): Order Accepted, Order Restatement, Simple Option Order Accepted, Option Order Modified, Option Order Restatement</i> The working price of the order.

## Appendix G. CATFT (fileX) Token Service Instructions and Examples

### Pre-requisite requirement

The CATFT service requires established direct connectivity to CAT as the service is only accessible via direct connectivity.

### Endpoints

CATFT S3 Token service should be accessed using OAUTH tokens. The OAUTH token can be obtained by making an API request to CATFIP (CAT Enterprise Authentication Service) using the endpoints defined below.

The CATFIP API POST request should be made using Basic Auth method (username and password provided by FINRA CAT) but all subsequent requests to CATFT S3 Token service APIs should be made using the obtained OAUTH token passed as a header (see CATFT API section for details). The OAUTH token is valid for up to 12 hours.

CATFIP endpoints for retrieval of OAUTH Tokens are as follows:

Environment	Endpoint
UAT (CT)	https://ews-ct.fip.catnms.com/fip/rest/ews/oauth2/access_token
Production	https://ews.fip.catnms.com/fip/rest/ews/oauth2/access_token
Disaster Recovery (CT/Prod Mirror)	https://ews-ct.fip.dr.catnms.com/fip/rest/ews/oauth2/access_token

Header	Required (Y/N)	Default	Example
Authorization	Y	N/A	Authorization: Basic base64-encoded(username: password)
Accept	N	application/json	application/json

#### Sample CATFIP API call:

```
curl --location --request POST 'https://ews-ct.fip.catnms.com/fip/rest/ews/oauth2/access_token?grant_type=client_credentials' --header 'Authorization: Basic XXXXXXXXX'
```

#### Sample response from CATFIP API:

OAUTH Token is the value of “access\_token” key in the JSON response.

```
{  
  "access_token": "xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx  
xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx",  
  "expires_in": "43170",  
  "scope": "any",  
  "token_type": "Bearer"  
}
```

CATFT endpoints for retrieval of S3 tokens are as follows:

Environment / Product Type	Endpoint
<b>UAT (CT)</b>	
<b>Equities</b>	https://filetransfer.ct.catnms.com/S3TransferTokens/{XXXXXX}/cat-equities
<b>Options</b>	https://filetransfer.ct.catnms.com/S3TransferTokens/{XXXXXX}/cat-options
<b>Production</b>	
<b>Equities</b>	https://filetransfer.catnms.com/S3TransferTokens/{XXXXXX}/cat-equities
<b>Options</b>	https://filetransfer.catnms.com/S3TransferTokens/{XXXXXX}/cat-options
<b>Production Mirror</b>	
<b>Equities</b>	<a href="https://filetransfer.prodmirror.ct.catnms.com/S3TransferTokens/{XXXXXX}/cat-equities">https://filetransfer.prodmirror.ct.catnms.com/S3TransferTokens/{XXXXXX}/cat-equities</a>
<b>Options</b>	<a href="https://filetransfer.prodmirror.ct.catnms.com/S3TransferTokens/{XXXXXX}/cat-options">https://filetransfer.prodmirror.ct.catnms.com/S3TransferTokens/{XXXXXX}/cat-options</a>
<b>Disaster Recovery (CT/Prod Mirror)</b>	
<b>Equities</b>	https://filetransfer.prodmirror.ct.dr.catnms.com/S3TransferTokens/{XXXXXX}/cat-equities
<b>Options</b>	https://filetransfer.prodmirror.ct.dr.catnms.com/S3TransferTokens/{XXXXXX}/cat-options

`{XXXXXX}` is the id associated with the EWS account.

## S3 Buckets

The S3 buckets and paths for submitting and retrieving data are as follows:

Environment / Product Type	Submission	Feedback
UAT (CT)		
S3 Buckets	3275-9867-7452-eft	3275-9867-7452-eft-feedback
Equities Paths	3275-9867-7452-eft/{XXXXX}/cat-equities/in	3275-9867-7452-eft-feedback/{XXXXX}/cat-equities/out
Options Paths	3275-9867-7452-eft/{XXXXX}/cat-options/in	3275-9867-7452-eft-feedback/{XXXXX}/cat-options/out
Production		

<b>S3 Buckets</b>	<b>4145-5486-2873-eft</b>	<b>4145-5486-2873-eft-feedback</b>
<b>Equities Paths</b>	4145-5486-2873-eft/{XXXXX}/cat-equities/in	4145-5486-2873-eft-feedback/{XXXXX}/cat-equities/out
<b>Options Paths</b>	4145-5486-2873-eft/{XXXXX}/cat-options/in	4145-5486-2873-eft-feedback/{XXXXX}/cat-options/out
<b>Prod Mirror(CT)</b>		
<b>S3 Buckets</b>	<b>3275-9867-7452-eft-pm</b>	<b>3275-9867-7452-eft-feedback-pm</b>
<b>Equities Paths</b>	3275-9867-7452-eft-pm/{XXXXX}/cat-equities/in	3275-9867-7452-eft-feedback-pm/{XXXXX}/cat-equities/out
<b>Options Paths</b>	3275-9867-7452-eft-pm/{XXXXX}/cat-options/in	3275-9867-7452-eft-feedback-pm/{XXXXX}/cat-options/out
<b>Disaster Recovery (CT/Prod Mirror)</b>		
<b>S3 Buckets</b>	<b>3275-9867-7452-eft-pm-us-east-2</b>	<b>3275-9867-7452-eft-feedback-pm-us-east-2</b>
<b>Equities Paths</b>	3275-9867-7452-eft-pm-us-east-2/{XXXXX}/cat-equities/in	3275-9867-7452-eft-feedback-pm-us-east-2/{XXXXX}/cat-equities/out
<b>Options Paths</b>	3275-9867-7452-eft-pm-us-east-2/{XXXXX}/cat-options/in	3275-9867-7452-eft-feedback-pm-us-east-2/{XXXXX}/cat-options/out

{XXXX} is the id associated with the EWS account.

If the reporter name is provided in the file name, the feedback will be made available in either the equities path or options path, as appropriate for the named reporter.

If the reporter name is not provided in the file name and only one feedback path exists (either equities or options, but not both), the feedback will be available in that path.

If the reporter name is not provided in the file name and both equities and options paths exist, the feedback will be available in the options path at cat-options/out/YYYYMMDD/otherErrors.

## CATFT API

The below details out the HTTP GET method to retrieve tokens against the CATFT (file transfer) service.

The following header parameters should be passed when making the REST API call:

Header	Required (Y/N)	Default	Example
Authorization	Y	N/A	Authorization: Basic base64-encoded(username: password)
Accept	N	application/json	application/json, application/xml

\* Org\_id and the username - password to use the token service will be issued by FINRA CAT.

[illegible]

- [illegible]

[illegible]

- ii. Set the received token as environment/session settings  
in the application (LINUX example below)

```
export AWS_ACCESS_KEY_ID=ABCDXXXXXXXXXXXXXXXXXXXXX
export AWS_SECRET_ACCESS_KEY=XXXXXXXXXXXXXXXXXXXXXXXXXXXXX
export AWS_SESSION_TOKEN=
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX+=
```

**Note: The session token is valid for 3 hours, so perform the file transfer steps before token expires. Request and use a new token for subsequent file transfers.**

## **Appendix H. Plan Processor Best Practices**

This section contains a bulleted list of best practices for Plan Participants.

Use a retry loop with a minimum of three attempts when submitting to or pulling from a FINRA CAT S3 location.

Re-use valid and non-expired AWS S3 STS tokens whenever possible instead of using a new STS token per file.

The AWS S3 STS token is temporary and will expire within an in 3 hours. For larger file uploads, refresh the token in 2 hours and 45 minutes to ensure there are no gaps

## Appendix I. Historical Summary of Document Revisions

Version	Date	Author	Description
1.0	5/14/2017	Thesys CAT	Initial release.
1.1	6/2/2017	Thesys CAT	<p>Incorporates feedback from version 1.0.</p> <ul style="list-style-type: none"> <li>• Various minor changes to correct typos, and make clarifications.</li> <li>• Sale Condition - Added the Supplemental Trade Event to provide a way for sale condition to be reported independently of the trade/fill event itself. In addition, the saleCondition in all the trade/fill events was marked as conditional.</li> <li>• Changed "style" to "exerciseStyle" for clarity</li> <li>• Changed timestamp format from UTC to Eastern (kept alternative timestamp format).</li> <li>• sequenceNumber changed from Required to Conditional</li> <li>• result and resultTimestamp changed from Required to Optional</li> <li>• Removed price from trade break event. Clarified definition of quantity in trade break event to allow for partial trade break.</li> <li>• Made buy/sell details on a trade correction optional - for simpler cases where only the price/qty are changed</li> <li>• Added executionTimestamp and reason as optional fields to trade correction events.</li> <li>• Fixed some Message Type typos and mismatches between tables.</li> <li>• Fixed inconsistent use of cancelReason and cancelReasonCode so all uses reference cancelReason.</li> <li>• Changed clearingFirm in stock leg from a validated MemberAlias to a free form Text(10) - as explained by SRO this field is received in the order from the BD and is passed thru to the firm executing the stock leg - there is no validation of this field. Also, changed to be optional.</li> <li>• exchOriginCode removed from complex option stock leg events</li> <li>• timeInForce, handlingInstructions, and orderAttributes added as conditional fields for complex option order modify event</li> <li>• liquidityCode is optional for option trades because some option exchanges do not track and report add/remove of liquidity.</li> <li>• Stock Leg Fill Event - renamed tradeID to fillID; removed quoteID; changed orderID to required; clearingFirm changes as mentioned above; clearingNumber is now optional</li> <li>• Post Trade Allocation - added optional fields as requested: openCloseIndicator, exchOriginCode, mktMkrSubAccount, reason</li> <li>• Upload directory will be the date for the events being reported</li> <li>• leavesQty in side details is not required when used in conjunction with a trade correction</li> <li>• cmtaFirm and mktMkrSubAccount are now conditional rather than optional</li> <li>• Modified Events - optional fields changed from optional to conditional since they are required if their value changes, and is more consistent with the definition of conditional than optional.</li> </ul>

Version	Date	Author	Description
			<ul style="list-style-type: none"> <li>Substantial updates to data dictionary, including additions to orderType, executionCodes, handlingInstructions, and orderAttributes based on SRO feedback.</li> </ul>
1.2	6/20/2017	Thesys CAT	<ul style="list-style-type: none"> <li>Minor changes to correct typos and add clarification</li> <li>Data Dictionary - reformat; address typos and inconsistencies</li> <li>Add ETF to issueType; add issueType to examples</li> <li>Update JSON/CSV schema</li> <li>Clarified orderID for option cancel and stock leg fill</li> <li>Supplemental Trade Event - side is conditional on fillID</li> <li>Clarifications in feedback section</li> <li>Updated tables for FINRA reporting formats: sections 6.3, C.4, and D</li> </ul>
